

SHEFFIELD SCIENTIFIC SCHOOL OF YALE COLLEGE,

New Haven, Connecticut. Dec. 27th 1882

J. W. Dawson Principal of
McGill College

Dear Sir you may perhaps
recall the evening that I passed
at your cottage at Heter's more
than a year ago. I had just
returned from an excursion with
my son John in the mountains
of Garza Co. John had collected
plants, more especially alpine
species. After long delay his collection
has been carefully studied and
~~all~~ with the assistance of friends
all the species are named —

We have thought that you might
like to add some of these specimens
to your herbarium, John has selected
from his duplicates 50 species including
nearly all the alpine or northern forms,
and we send them today by Express.
Yours truly C. D. Allen
