

Hub Cupper
Eton College.
Windsor.
23 November - 1885.

Dear Sir William

My mother has
put into my hands a
letter of yours to my
late father about
Eggon matters. We should
be glad to know what
your wishes would be
with regard to the Com.

-pletion of the Monograph.
Were I not so deeply
involved in Binoid work
I should like nothing
better than to attack it
myself as one of my brothers
suggested to me - But
this I could not do
for some months without
breaking off my previous
engagements with Mr
Murray, Prof. Agassiz & others

who have put material
into my hands. I had kept
myself au fait of the work
& read Mörkus in order to
make an analysis of his
paper for my father. But I
see no prospect of commen-
-cing for months to come,
& have wondered how you
would like Nicholson to
take up the work. He is
just finishing a Monograph
on Stromatopora for the

Palaontological, & has
therefore "got his eye in"
more or less.

My mother keeps up very
bravely, though she natur-
-ally breaks down occa-
-sionally - She was very much
gratified at Lankester's
notice of my father in
the Academy for 21st Novemb^r,

Give my kindest regards to
Lady Dawson, your daughter,
& my old friend, your son,

& believe me

yours very truly
P. Herbert Harkester
