

Montreal, July 26<sup>th</sup> 1887

Dear Sir Mr Dawson,

Mr Fowler  
of the 23<sup>rd</sup> is at hand.  
I have already made  
several drawings of bema-  
tophytae and have com-  
menced to transfer them -  
& finish with a view  
to photo-engraving if de-  
sired. The figures are now  
about half finished. I  
enclose the tracings  
for your inspection, and  
if there are any you  
particularly desire, kindly  
return such, and I will

in the hope that some recollecting  
lights may be thrown upon the  
subject. The question still continues  
doubtful, but as comforters visit their  
pleas, it is not comfortable. So we are  
boled by our visitors. The S. S. Hall  
Palace is here, and I shall invite  
the officers and their wives & go over  
the College and its new work (Wednesday),  
if their engagements permit.  
With kindest regards,  
I remain

Very sincerely  
yours  
D. D. Bunker

finish them off for  
you. At the same  
time, please let me  
know at what time  
they will be required.

I think an idea of restriction  
such as you sug-  
gest could be made,  
and might prove  
useful for your popular  
work. I will try and  
work me out for you,  
though as you say,  
it will be a great as-  
sistance if we can  
get a little more  
insight into the proper  
structure of the Central  
Layers. I will therefore  
await the results of  
your visit to Campbellton

Rehullen
