

Pleasant Hill Mo June 14 - 1878

Prof Hauer
Dr fr

Yours of 9th inst -

Broadhead
Gruess

forwarded to me from Columbia -

When I return to C. which will probably be some time next month

I will examine the specimen

carefully and let you know of any specific peculiarities which there may be if any -

I do not think there were any other organic remains associated with it - My recollection is that the entire log as found was about 60 ft long lying transverse the quarry of Sandstone and of course

objectionable to the workman
The piece I obtained was about
2 ft long & weighed over 50 lbs
I had it in my possession 6 years
but a few months ago donated
it - to The Museum of State
University -

I am much obliged for
your kind notice of it - I
sent it thought it might
interest you - I have further to
tell I treasure in my possession pieces
of silicified wood from various
geological horizons - Denton, Cutaw
& Carboniferous

Yours
truly,

G. C. Broadhead
