Andrew Jung

Dear Sir

Since receiving your letter I have tried quarrying out some specimens but they do not come out so easily as I expected.

The tops for some reason or other are all gone and I do not know how far down they extend. If I cannot get a good end section will a middle section do.

I have a fine middle section here which I found on the surface and as far as I can remember, it is about 1 foot ^{long} ~~deep~~ and 16" in diam. It will weight about 200 lbs.

If you think it worth
while paying the freight
on this one I will send
it down. and if I should
happen to find a better
sample I can send it
down some future time.

I could not find any of
the smaller fossils suitable
enough to send

I am yours Truly
Andrew Young
