July 5th 1888

Dear Sir

I take the liberty to ask your scientific opinion on a subject at present of almost vital interest to us in this Territory

For the past year or two we have been drilling for a supply of water and in almost every case have succeeded in getting a plenty at a depth of from 130 to 200

fect - That is to say
good Artesian Wells
Generally the water is
more or less Salty - so called
and I have thought a
Chemist might be able
to suggest some compar
atively inexpensive filter
that would make the water
good for domestic purposes
Stock do say well on
it - but he cannot use
it for drinking - tea
Coffee &c - Your early
reply will much oblige
an Old McGill Student

Rev. Dawson

John Grandy
