

Took the piece home & found it to be
full of a fluted coral much
flattened, but not otherwise distorted
& with the flutings beautifully
preserved.

How odd to find
them in a place open to the
public eye, by the side of the
High Road to Oban, & as good
some one of truly every species
of geological exploration!

Believe me dear
Mr William

Yours &c
A. L. L.

Jan 12. 1890.

My dear Mr Villiam. Let
me return you kind good
wishes for the new year, I
thank you with my Father's
parted my own for the
copies of the papers on old
sponges & newer leaves.
He found in them answers
to questions he wishes to speak
about at Edinburgh. You will

be interested to hear that
Jackie wrote the other day
sending some specimens of
apparent coral from Norway,
and asked my father to
look out for similar
corals in the rocks in
the neighborhood of
Norway.

The letter only arrived last
week & the very day after
its arrival, he was driving
up a glen near Invermay
and a little white on a
rock caught his eye. He
got out and found a slab
of blue coloured rock covered
with white carbonate of lime in
thin plates between the lines of
bedding. He could only find one loose
fragment, & the light was waning. He
