WASHINGTON, D. C., April 18, 1890.

Sir William E. Dawson,
Mc Gill College,
Montreal, Canada.

My dear Sir:

Your letter of April 16th and the pamphlets you mention are at hand. The present work on the Graptolites deals mainly with the synonymy of the genera and species. We hope in the future to illustrate, in some way, all the American species. When this is done it may be that I shall like to study the original specimens of Dictyonema websteri.

We are having a meeting of the National Academy of Sciences here this week, and there is, this afternoon, to be a meeting of the Committee of the International Geological Congress for the American meeting of 1891. On this account I am very busy. So permit me to thank you for your kindness in sending me the pamphlets and for the letter with the information in relation to D. websteri. *Embate*

Very truly yours,

Charles Walcott
