New Haven, Oct. 6. 1892

My dear Sir William:

As my health is not very good & I have much to do, I have neglected replying to your note on Eozoon.

My ~~thought~~ was this.

If animal life was limited by a temperature of 120°F ., the Eozoon must have lived in the later part of long Archean time, after this temperature had been reached by the cooling earth, and as this part must have been covered by the Huronian, the Eozoon was part of the life of that period. I do not see how to avoid

this conclusion.

Sincerely yours

James W. Dana
