Sir J. W. Dawson

Dear Sir

I send by this mail a copy of
the journal of the above Society, which
you will see contains the abstract
of a paper read some time ago by
one of our members D. Webb in
which he takes up a position
antagonistic to the organic character
of Erzyon -

I know, he has advanced nothing
new or unanswerable, and from
time to time I have made communications
on the subject - in favor of its organic
character - but now would like to
have a few words from one who is
an authority on the subject and
therefore make bold to ask from you

The favour of a short communication
giving the most recent phase of thought
upon the subject — if accompanied
by a specimen — so much the
better

I have one or two specimens which
I have purchased some time ago
but which I cannot exhibit as
they favour the purely mineral
character and are doubtless such
as you referred to on your visit to
England as being undoubtedly mineral
but not Eozoon.

We shall always be pleased
to have a communication from
you as an respected member of our
Association — but at present on
any subject — just at present we
should be specially pleased with
a note on Eozoon

Yours very truly

H. Laque

President
