WASHINGTON, D. C., Dec. 26, 1893.

10-770  
Sir J. William Dawson,  
The Thorndyke,  
Boston, Mass.

Dear Sir William:

I find that I still have so much cold and general indisposition that it is not best for me to go to Boston. I regret this most sincerely as I wished very much to be present at the meeting and to cooperate with you in any way that I could.

I find in your article in the Quarterly Journal of the Geological Society, 1888, p. 809, the reference to the formation of the conglomerates of the Quebec series of rocks by ice action. I should like, however, to have references to any other papers in which you may have referred to the subject, if you can readily find such.

Hoping that you may have a most successful meeting,

I remain,

Yours Sincerely,

Charles Walcott

I remain,

Yours sincerely,
