My dear Sir,

In reply to your
kind letter of the 16th inst,
I may say that I should
have much pleasure in
preparing a part on the
subject you mention, pro-
vided it were not re-
quired till toward the
middle
end of the summer.

I may mention that
I have taken up the
subject in a series of papers
now in progress in the
"Expenter", and that the
paper referring to this sub-
ject

44/12/14

@ glencross.com

ject will probably appear
in the May number,
you will see in this
paper my point of
view on the matter,
which I fancy will be
agreeable to your Com=
mittee. The treatment
of the subject which
you would require in
the "Recent Day" Series
would be more ex=
planatory and popular
than that in the "Ex=
perts", which is intended
for special students.

I may also say that
in a little book now
in the hands of your
general editor for publica-
tion, entitled "The
Meeting - place of Geology
and History" some reference
is also made to the
change in its geological
relations, somewhat on the
lines of Rostovitch's papers.
This new volume is more
condensed and less ex-
planatory and practical
than what would be
suitable for your series

If in view of these
^{facts} statements you think
the tract in question
called for, I shall be
glad to undertake it
and to endeavour to
finish it before the
end of July, should
it please God to prolong
my health and life.

Truly yours
Wm Dawson,
J. P. Hobson
