ACC. NO. 2211/15
REF. 23

Mr. A. S. Packard has
reported the discovery of
a class of fulgur balls
by full time men &
two cars. They state
that Mr. Packard has
been well down the
pasture line as in
August and by such
work in July and
under this. They
by ^{the} work in the
near slopes of the
and on the recent
near summit of the ^{mountain}
of ~~the~~ ^{the} ~~mountain~~
mountain in summer

They say its usual to
 the man seen as
 as they say you
 paper & paper the
 deep sea. We say
 by the way the end
 below & it is
 the new actual view -
 the man with the
 model as it is
 a group of people the
 its to be the of
 by a separate here
 camp as it is of
 on leaves and bed
 through many who

will there be dolls
to all parts of the
great capabilities of
the present,

Other important
questions are the
way of making the
plan to as if it were
the that on the one
of the beds but with
deep plans to the
anyhow all by the
means that would be
to so by beds as
with the help of the
The great of the
for they was to the

looking for my
to be my little
of the of letters
the and there
in the end of
and we see
But why that
the letters with
and so to the
in the other had
creating just like
by 2 my own
Philips said we
nearly did the
the. and pass
in the end of the letters

Under Middle Row
of the I do not
despair that the
accidents which
the middle Row
which may be seen
in many of
them

Just you could
get one with the
Pole of the North
but I fear it
does it will
be for the days
with the response
at present.
