

Feb 16

The letters

seem now
hardly ever to come
in time to answer
by the valley post,
& this week will
I expect be very late
from the 1st
continuance of
heavy easterly gales.

London Feb 13 92
1910

Dear Papa.

I have now finished
the looking over of all the forams, & have
them mounted & ready for naming.
Which process I hope, (except in a few
instances will not take very long. I
hope to have the lists all finished
& ready to show you when you arrive.

What about the Post-pliocene forams?

The organic chemistry has now been going
on since the first of this month.

The first few lectures were on organic
analysis, the processes employed, & the
methods of working out the results, abundantly
illustrated by examples, & experiments.

Having got through this interesting part
we are now plunged in a mass of

Terminous formulae & names.

Which I am just beginning to understand a little. I don't think it is at all the most attractive or useful mode of teaching, but perhaps it will become more practical by and by.

I ~~see~~ ^{see} by the papers that Sir C. & Lady Lyell have had the honour of dining with the Queen at Osborne.

I am working away at the laboratory at the analysis of mixtures, as I mentioned before. I don't however get on so quickly as I would like. partly because I have to make shorter hours than the others, & partly I suppose because I am impatient to get on to some ^{quantitative} ~~qualitative~~ work.

I am pretty sure to be employed as I now am all through next month, at least.

When mamma last wrote your cold was not quite gone, but I hope that long before this it will have done so.

Yours affectionately
George.
