

Serge  
Jan 17. 1883

Dear Father,

I left on your library  
table a pamphlet on "Glacial  
Suria" which I thought you might  
like to see. When you have  
done with it you might mail  
it up here. There is a second  
pamphlet on lakes, by the same  
author bearing out various  
conclusions which if you would  
like I can send down.  
Also if you would like to  
see Haynes' account of  
discovery of palaeolithic implements  
in Egypt, I can send that also

Your night letter to Walter  
 that the specimens left at Scotts  
 have not yet arrived. I telegraphed  
 down I fear about them on  
 Monday, however, & suppose  
 he will send them along soon.  
 It seems scarcely worth getting  
 them packed if it takes all  
 winter to have them done.

Yours affectionately  
 George.

I send back the Pleurotomaria.  
 Mr W. does not seem to know much  
 about them, but reference to Museum  
 & Can. Nat. Vol 4 No 6. Decr 1859.  
 The specimen (so named) appears to  
 represent Cuvieri, while the others named  
Dawsoni might be young of P. Calyx,  
 but do not show beveling of edge distinctly.
