

Simple
GEOLOGICAL & NATURAL HISTORY SURVEY.

Alfred R. C. Selwyn L.L.D., F.R.S., Director.

MUSEUM & OFFICE, SUSSEX ST. OTTAWA.

7 Feb.

1885

Dear Father,

I mailed today the section of drift deposits which I mentioned some time since as being possibly useful to you as a diagram.

Since I wrote yesterday I have heard additional confirmation of the fact that Hunt is working both a nail against the Surrey. He actually sent

Mr Broad's letter in which
 deprecating remarks are made
 about Selwyn & self (the one
 I showed you in the week) to
 the Gazette with a note hoping
 that they would publish that
 'very important communication' or
 to that effect. They, however,
 declined. This of course is
 private.

I mentioned to Dr Selwyn your
 question about Amis & paper
 or pamphlets. He seems to
 have no objection to his
 publishing a paper but would

3

Expected him to submit his
paper for permission
before sending it off. He
seems to think Ami is rather
superficial in his determinations
of Graptolites. I do not know,
but suspect this is a reflection
of Mr White's views, which
are adverse to anyone working
at palaeontology except
himself

Yours
Lodge
