

GEOLOGICAL & NATURAL HISTORY SURVEY.

Alfred R. C. Selwyn L.L.D., F.R.S., Director.

MUSEUM & OFFICE, SUSSEX ST. OTTAWA.

21 June 1886

My dear Walter,

I have been looking up the matter of  
Arctic rock specimens with the following results,  
If you should happen to be able to see any of these  
mentioned it might be sufficient to put some value  
to the Arctic geology notes which apart from these  
are merely compilations & largely from De Rance's  
general descriptions in nature. The rocks of the  
older series are the most interesting as the fossils  
have already been pretty fully worked out &  
reported on. The only exception to this being probably  
the Archaic stage plants of the Parry Archipelago  
etc which might yield more to you than they  
have done to others

Yours  
George

On Campbell's views I find it rather a providable  
affair. However I trust you will not put yourself  
to any trouble about it one way or another as it  
appears doubtful whether I can learn the information to good effect.
