De Joss

2 December

3 dear Father,

Mr Laurin y etc  
Laurin who has been in Europe  
during summer was asked by  
Porembuck the well known lithologist  
for specimen of Eozoon for microscopic  
study. Mr Weston I think supplied  
Laurin with a specimen given  
kind but if you happen to have a  
small piece showing good structure,  
to spare I will send it to me I  
think it might be a good plan  
as Porembuck is now likely to  
study the subject if he goes into  
it with some intelligence.

I have some peculiar  
 Cryptozoon-like things from  
 the Cambrian of Rocky Mountains  
 which I had tried some time  
 ago, but have looked up  
 lately & propose bringing down  
 when next I come to Montreal.  
 I thought when I looked  
 at them originally that they  
 were concretions, but am now  
 doubtful about this. If you  
 are writing anything about  
 this subject & wish it I  
 can send the specimens to you.

Yours  
 Gump
