

GEOLOGICAL SURVEY DEPARTMENT.

Alfred R. C. Selwyn, C. M. G., L. L. D., F. R. S.,

DEPUTY HEAD AND DIRECTOR,

MUSEUM AND OFFICE, SUSSEX STREET, OTTAWA.

Jan 8 1891

My dear Father,

Enclosed is that Crank's letter which you sent me with a memo. which may be of some use to him or her. I think Carpenter is largely responsible for statements about Greenland both Atlantic drift & Gulf Stream but cannot recollect where his statements are to be found. Letters of the character of this should I think be left unannounced for at least a month to discourage further applications.

Also enclosed is a long letter which you forwarded from the Duke of Argyll which I should be glad if you would read & say later on what you think about his views. I don't see very well how we can suppose Submergence & elevation of Continent so sudden as not to permit the establishment of marine shells in submerged area. I suppose I shall have to answer the letter in some way. Would you kindly add when you

return it a memo. or to how such
an urgent message should be addressed in
writing if really thin.

My envelope got back from Washington by express
today, so that I am now even on the trip

yours
George
