I return herewith Mr Stentor's
note & send by the same post a copy of
Mr Whiteover's last paper, in which I think
you will find the information you need, particularly
on p. 13. The Colorado group is of course the
Benton Niobrara & of this the flora should
probably resemble the Dunvegan lot, or
possibly as high as Belly River, though this
is likely more closely associated with the Pierre
Fox Hill or "Montana" division of the Cret.

Yours
Sincerely
A. R. C. Schoyn
