

GEOLOGICAL SURVEY OF CANADA,
George M. Dawson, C.M.G., LL.D., F.R.S.,

DEPUTY HEAD AND DIRECTOR,

MUSEUM AND OFFICES, SUSSEX STREET, OTTAWA.

Jan 4 1896

My dear Foster,

I have this morning
received your parcel of
neatly bound books & thank
you very much for them. The
description you sent before
has been duly inserted in
the front of them.

Respecting the small lot of *P.C.S.*
plants. — So far as we can
work out from the Whitcomb
list, sent by Newcomb, & these are
pretty definite, the plants came
from the same series (C) as that
holding the great part of the
Wollastonian fossils. These then W.

made equivalent to fault.
He has been company with
forms with Kosmaty of Vienna
Cotely & that well known
authority says Gault & part of
upper Greensand. I do not
know what there is immediate
call for any notice of these plants,
if Dr Newcomb goes back
collecting this summer I will
commission him to get
more if he can & it might
do to wait & see what he
accomplishes.

About lists of Pleistocene American
 mammals. — I must plead
fully & truly for the expense,
but if I can hear of anything
will write tomorrow. I see a

Book reviewed in Cort
Science by Lydekker. Called
 a Geographical History of

Mammals which might give
 this sort of information.
 I will get it for the library.
 I've run patches into it,
 but there is a species
 water & deepens wider
 views which Lydekker seems
 inclined to take.

Yours truly

Seymour

P.S. I shall hope to hear

good news of Bernard
