

Prof. Hammett

My dear Sir:

I never had much correspondence with Mr Logan, and have no letters that would be of importance to you.

My estimate of him as a man & geologist has always been of the highest, and I have regarded his death as a great calamity to science. His energy, thoroughness & caution made his

Conclusions the best which
the case admitted of,
always trustworthy. It
is a pity he did not
leave another Logan
behind him, to carry on
his unfinished work &
complete the Canada
Geological Survey.

Wishing you success
in your work
& remain

Yours very truly
James D. Dana

That removal of the specimens
to Ottawa is a misfortune
every way.
