My dear Bernard

You have time to

read & answer my letter. I sh^d.

be very much obliged if you

could give me some information

on freezing machines. I am in-

terested in a proposed scheme

to ship frozen Salmon to Eng-

land. I am told that if

large air tight wooden com-

partments are built in a

ship that with the assistance

of an air pump. Ethen

ammonia &c. The Temper
ature in these chambers
can be lowered many degrees
below zero. In this way. frost
may be kept an unlimited
time at a small expense
now I am no chemist & I
know of no one who would
be more likely to know all
about it than yourself, or
to put me on the track of
learning what I want to
know. I just want to know

Whether this is feasible than
about the cost of a machine
to the cost of Chemicals to
keep say 10,000 cubic feet at
a low temperature per annum.

Now my dear fellow I know
you are always busy, little
time to spare to distant
friends, but if you can
put me in possession of the
information I want. I shall
feel extremely obliged.

Shall see you up here

This summer? It should
be charming to see you & your
family although the induce-
ment are few beyond fresh
air. I send you my
kindest regards to yourself
& wife to the young ones &
many kind wishes for the
New Year.
Yours faithfully
Geo. W. Brown.
