

WILLIS RUSSELL.
PRESIDENT.

St Louis Hotel,
Quebec 29 Sept 1881

B. I. Hannington Esq
Montreal

Dear Sir

I have on the dump
at my Antimony Mine, a thousand
or two tons of low per centage
of ore, which I wish to ascertain
the exact per centage of metallic
Antimony it carries, in view of
putting up machinery to concentrate
it, high enough for a market, say
from 35 to 50%, if I should send
you, a sample of fifty pounds or
so, can you assay it for me, that
is to give me the per centage of
metallic Antimony the mass might
contain.

Enclose \$8⁰⁰ for the assay
you last made.

Yours Respectfully
Willis Russell

W. Russell, Quebec

P.S.

I send you by express,
a concentration of the one referred
to made in New York, from
similar specimens I should
send you for trial, I think
this concentration was by the
wet process.

I also send you three
phials made by the dry process
called Kname process, the richer
result of this process, I am
not able to send, but I think
the concentrated it as high as 50%
the three phials referred to, are the tailing
