D. B. J. Harrington

Dear Sir:

You favor recd. I shall, in a few days, send you by mail a small box of fossils. I lose no opportunity to add to my cabinet of minerals & should be pleased to receive anything on that line that you may be able to spare, to the extent that you <sup>may</sup> think what I shall send to be worthy.

We are just now having an Society (Acadian Science Club) incorporated under the name "Comadieu Portal College of the Natural Sciences".

It is even now exerting a wide influence, and we feel confident-

that its sphere of usefulness  
is soon to be vastly increased.

I should be happy to propose  
you as an honorary member.  
Will you kindly inform me when  
Dr. Dawson will return or where  
a letter should be addressed  
to reach him? We are to invite him  
to accept the position of honorary  
President. We trust that he will  
accept the office as his connection  
with our Association could give  
it a justly deserved addi-  
tional popularity & use-  
fulness.

I am about to enlarge The Scientist.  
Its name will also be changed  
and it will soon be known as  
"The Canadian Science Monthly."  
In connection with the enlargement  
I shall issue a prospectus in  
which will appear the names of

contributions, past, present, & future.

I should be glad if you would allow me to add your name to the list, and, at some future time, honor our pages with some communication, (if but a few notes). Indeed I hope that every working Naturalist in Canada will use the "Monthly" to make known the results of his investigation. With such support - I am sure that our little journal can be made a not unworthy contemporary of the "American Naturalist."

I remain

Very truly yours

A. J. Pines
