My dear Harrington,

I have to thank you for your letter containing analysis of coal. I think the seam alters very much as it goes into the cliff and we now have a number of men at work, and I hope to have samples soft in, in the course of a few days.

I am going to Montreal shortly and will bring these with me. In burning, the coal is much superior to any yet found save the "Galt" mine. Again thanking you,

Believe me
Sincerely yours.

Drummond
