Prof B. J. Harrington,

Magill College,

Montreal, Canada

Dear Sir,

I have sent a box of specimens to the Survey and enclosed in it a small box for you which I have asked Dr. Ellis to transmit to you. I trust you may find in it something of interest. If it is perfectly convenient and you have the time to attend to it I would like very much to have a specimen of the "nepheline laurentian" and a specimen of "<sup>Saundersite</sup> ~~deserite~~" and if you have it a piece of the trap rock passing through the Trenton limestone and not changing it, you gave me a very fine specimen in which the <sup>dyke</sup> ~~dike~~ had changed the limestone into marble.

If there is anything at all in this region that you want it will be a favor if you will mention it to me as if I can procure it it would give me great pleasure to send it to you.

Thanking you for your kindness and courtesy towards me while in Montreal and asking to be remembered to Mrs Harrington,

I remain,

Yours truly,

*Theo D Rand*

*Excuse mistakes  
my stenographer is a better typewriter than geologist!*
