ACC. 1010

Prof. B. J. Harrington, B.A., Ph.D., &c.

Dear Sir,

My youngest son (18) is preparing, (while still following his french college course) to enter the applied science course of McGill next year, & is studying up mathematics, physics &c with a private tutor, to enable him to pass the first year examinations & enter the second year. I see in the Calendar the scope of the subjects to be mastered in Chemistry. These I presume the students acquire in the lectures. Is there a text book used, & which? would you be so kind as to let me know what author or book the boy should study,

and how far. He can learn
at the Mount St. Louis College
Dwrich he goes, the elementary
use of Apparatus &c.

Please give me any hints
or suggestions you may deem
useful to enable my son to
prepare for the second year
course - & much oblige
yours truly

George E. Desharats.
