SCHOOL OF MINES, COLUMBIA COLLEGE,  
CORNER 49TH STREET & 4TH AVENUE.

NEW YORK, Nov. 22, 1892. 189

Prof. Harrington,  
Mc Gill University,  
Montreal, Canada.

Dear Sir:

A considerable quantity of Alabandite has been sent to the School of Mines, which is good both as a mineral and for students' work. We should be glad to let you have 100 lbs., if you wish it, at the rate of 10 cts. a lb., which is about what it cost for transportation. We should not care to send much less. We have also a considerable quantity of Copiapite and Coquimbite from Chili, which we could send for 25 cts. per lb. in quantities of 25 lbs. <sup>with less than</sup> These minerals are very difficult to get. I should be glad to let you have them at these figures.

Yours truly,

*W. A. Egerton*

NEW YORK, NOV. 22, 1892.

Prof. Livingston,  
The Hill University,  
Montreal, Canada.

Dear Sir:

A considerable quantity of Alabaster

has been sent to the School of Mines,

which is used both as a mineral and for

students' work. We should be glad to let

you have 100 lbs., if you wish it, at the

rate of 10 cts. a lb., which is about what

it cost for transportation. We should

get some of your material. We have also

a considerable quantity of copalite and

gypsumite from Utah, which we could send

for 50 cts. per lb. in quantities of 50

lbs. These minerals are very different

to each other. I should be glad to let you have

them at those prices.

Yours truly,
