

Sept 29 69

Dear George.

We were glad to hear again
 from you by last mail. I have
 not yet got the revise of the
 paper on Drums but hope to
 have it soon. Sankster has
 described and figured the new
 Cephalopods in the Geologist of
 September, and I enclose a
 note to you asking him to
 enclose the specimens to you.
 Please keep them till a
 parcel is coming. We have
 begun work here with good
 hopes. 30 in the first year.
 I am very busy and we
 have had a time full
 of visits so that I have
 scarce time to think of
 anything. I want very much
 a little rest and time
 to think, which I hope
 I shall have when matters
 get a little settled. I shall

hope to hear from you immediately on
your arrival in London; and please
tell me all news of every one, and
how you get on. I have prepared in
specimens of your steam-thimble in
relation to the engine and the work very
beautifully. I have still more remaining
in spirits. Do not take this for a letter
this and a half second. I shall write
again soon.

Your very truly
Wm. Jackson
