

Acc. 926

McGill Col

Oct 14, 1840

Dear George,

I send with this a
series of the paper on
Fossils, with a little ~~too~~ alter-
ation in the introductory sentence
& put it to publication in
England. I also enclose an
open note to Dallas which
you may send to him with the
paper after you have read
it over. I wish him to put
the paper in the *Annals of*
Natural History.

The notes on your
collections with the two - not
must I suppose wait till
Brad sends his determination
of the contents. If you like
you may throw the notes
into a readable form and
communicate them to the
Nat Hist Society here. Please

Relative preparations of
the anatomical which
are very beautiful. I
cannot learn that
these creatures have
ever before been brewed
in this coast.

Whiteaves has not
added anything to your
paper on the fishes,
except the names
of the places where he
sighted. I have ordered
50 copies of the paper
and shall send you
some for presents in London.

I suppose of what
you say as to lectures &c.
I hope you will find your-
self comfortable and
that you will get on
well with your classes

This winter

Please remember
me to all our friends
in London; and inquire
about Dr Gladstone and
mention how he is and
what he is doing. Do
not omit to go to church
regularly, and select good
men for your friends. If
you can keep up a acquaintance
with my father I shall
be glad. Give Dr Parker,
Prof Rhet, Sandhurst, and
Dr Carpenter copies of your
paper or Tracts when
it comes out. If you
can show Parker the
drawings and get his
opinion of the names
given to the Sandy Form
before giving the paper

Dallas, write to
well,

July 1863
with all love

W. Dawson
