

M. J. C. C.

Nov 11/70

Dear George,

I presume what you say about the Furrows. Please get the sandy ones corrected in any way you can. I have no good means of reference here. I shall look at Saytha you mention, but do not think there you drawing^x.

I presumed you reach the Committee's odd statement about Autotaxites. He has written to me about it and I see has fallen into an error as to the state of preservation. I have explained it to him; but he is somewhat stubborn and may hold to his view. If any one speaks to you about it you may say that we doubt the English oak is a sea-weed in the same sense

^x I find I have it and shall compare before this goes.

and to the same extent
— that is it sometimes
goes adrift.

Send me a note to
Bernard. Will you kindly
ask Dr. Pugh what is
his address and send
it to him unless he
is as I fear shut up
in Paris; but perhaps he
may be at Prague.

Give my love to
all friends — See Dr. Gladstone
if you can and give him
my sincere love and good
wishes.

Hope you go in for
a comfortable lunch and
take as good care as
possible not to get wet
or to catch cold. Give
kind regards to Mrs. Sweet
from your loving father
W. Dawson
