

July 13, 1847

Dear George

I have got Brady's descriptions which you sent, but am somewhat mystified. I do not remember of any dredged Entoms being sent him, but only P. & P. pieces. Were dredged ones sent, and if so were all the species he mentions in the dredgings or has ~~the~~ he mixed the dredged & the P. plis. If you are not sure as to this I wish you would write to him and ask. I shall probably have the paper re-printed here.

Enclose a note to Mr W. Saville Kent of the British Mus. Please read it and ask Stenledge or Snyly, before sending it, if he

if you don't send it till I hear from
you, if so give him your address.

is the right man; also
what has become of
Bowerbank. Please
consider whether you
would like to work
at the sponges, if I can
get the right man to
help you and the
proper books.

If you write to Brady
please thank him in my
name for what he has
done. His name is J. S. Brady,
Sunderland.

Please say to DeKay
that I have been trying to
write to him for a long time
and hope to soon. Ask him
about how many species of
Germanic Corals he will
have in his Monograph; also
if he knows how my articles
in Science House - just now out -
will be received.

Ever your loving father
J. D. Dawson
