 Feb 24,

Dear George

I have absolutely  
 nothing to say to-day, ex-  
 cept that I am very  
 glad again to hear  
 that you are well,  
 Take care however to  
 avoid those little colds.  
 They are always unsafe,  
 I fear you have been  
 twice at Harrow, I  
 wonder if he has received  
 my letter about the  
 summer and if he  
 means to do anything,  
 I shall hope to hear  
 something soon.

I am glad to hear  
 that Stenhouse has got  
 a cardata, It is very  
 curious that this  
 plant is so rare  
 in England when it  
 occurs both in Germany

and America.

I shall hope to  
hear from you about  
my paper; but do  
not expect it to make  
much sensation. Fossil  
plants are not much  
thought of in America.

I have got all my  
articles for the Science  
now written up to  
the Permian column  
and have sent off  
papers to Ireland

About 2000 and  
to Dana about Spore  
Cases. This is all  
I mean to do

in Science work till  
the lectures are  
over, and then  
I must try to go with  
Prof. Huxley.

Ever yours truly  
W. Dawson
