

Magnetic Observatory

Toronto, Canada,

6 July 1875

Dear Sir

In compliance with the request contained in your note of 1 July I send the monthly, quarterly, and annual means of temperature at Winnipeg derived from three years observations by Mr Stewart 1872-74.

The observations at St John's College, as they are taken at intervals of three hours, would give more perfect results, were it not that they do not extend back so far. I am yours,
G. S. Keay

Journal of Observations

Observation
at Winnipeg
Magnetometer.

1872

6 July

(Contd.)

The magnetometer was set up

at the observatory in the north of the

city of Winnipeg, Manitoba, and

was used for the purpose of

observing the magnetic field

at the observatory 1872-74.

The observations at the observatory were

not taken at intervals of three hours

would give more perfect results, but

it was found that the observations

are sufficient for the purpose of the
