

Poultank

2nd Mar. / 76

My dear Sir / At long last I
send you the Maps and Notes, which
only this day finished. I am
after all not by no means
satisfied with it. however,
it must go as it is, for I
have no more leisure to spare
upon it, and the time you
mentioned is fast approaching.

Thanks for your kind
suggestion that the map and
notes should be mounted at
the office of the Dept at Wash.
— for I have none of the
apparances for doing so here.
Indeed map-making in the

G. M. Dawson Esq
De & Co

Country, without conveniences
to, is uphill work -
I need not mention that, when
mounted, the Map and Notes
are to form one long sheet,
the notes at the foot.

I have perused with
much interest (though with
very slender pretensions to
practical Geology) your
excellent Report; and I
now thank you for the kind
proffer made me, and
gladly accept the work, which
will be useful to me for
future reference - You
will perceive that in the map
there are very few Geol.^l notices.
The scale was too small to introduce
more ^a on this subject, without
overcrowding - otherwise I should
have waded myself of many
of your observations -

I write in great haste
to save the mail - &
with my best wishes believe
me very sincerely yours

Alex. J. Anderson

My. Dr. Tolson expressed
a wish to see the map, after
it was finished - I write
inconvenient perhaps, you
will kindly allow him to
see it, should opportunity
offer before you send it
off.

By the way I see you
mention the name of Mr. C. C. C. C.
Barrington - a very old
friend of mine - I had
a letter from him last week -
Very interesting to me on many
points - though cluttered with
politics in party -
