The Office of
The North American Boundary Comm^{rs}.
Downing Street
London

15 May 1876.

Genl. Dawson Esq^r
Lake Geologist
to the North American Boundary Commission

Dear Sir, I send you a copy
of a letter received from
Dr. A. Günther Keeper of the
Zoological Department of
the British Museum, in
which he mentions the
great value of the collection
of specimens made by you.

The end

The excellent state of their preservation, and the discernment and knowledge of the collector.

Dr. Günther notes that several of the specimens included in the manuscript list given to me are not to be found in the collection; and, that there is a yet larger number of specimens in the collection not to be found noted in the list.

I beg specially to draw your attention

to

to Dr. Günther's request to be
furnished with notes of
the exact localities ^{to} where
the last mentioned ^{specimens} were
obtained.

With regard to the
absence of those which
are noted as being
amongst the collection
but not really there, -
I have to request you
will be good enough to
offer such explanation
of the apparent error
as the circumstance
make desirable.

Dr. Günther thinks
he requires Dr. Coues's
writing on the labels

of the supernumerary
specimens.

I forward the lists
of deficient, and of
supernumerary specimens
prepared by Dr Günther
for your information.

Requesting the favor
of a reply at your
earliest convenience

Yours dear Sir

Your very faithfully

Dr. Jamieson
Major R.A.

H. M. Jamieson

P.S. Dr. Günther mentions that
no eggs were amongst the
specimens. L.L.
