

Littlemetis,
July 16/85

Dear George,

We are all settling
here at your usual quiet
life, and I am looking
a little more nervous or
tiring in afternoon as
usual. Your letter to
Mamma arrived a few
days ago, and we
are very glad to have
details of your summer
plans, and wish all
prosperity to the Carolina

and her crew,

My part will here
now be to complete the
copying out of my N.S.
papers, about 70 pages,
which is now ready when
called for, which I
suppose will be when
Bourne gets through
with his Parliamentary
work now nearing
its close. I have
just in a short notice
of Belly River and

Sarawak things, reviewing
a full resume in future
The Larkhatchean, Bell R.
is nearly the same
in flora with the
Red Deer and Rosebud
River collections, which
are marked as Sarawak
Sarawak a St Mary's R.
Series. Certain plants
will not, according to
present appearances,
separate them two.
I shall hope however to
see you before this

part of paper is printed
Have any plants been
found in the ⁴Willow
creek sewer? I have
none so indicated. It
seems certain however that
the Calgary & Prairie plants
are Full Union, and the
others Sweet Saline
and these two groups
I think can be separated
I wish I knew where the
New River R. plants
should come in. They
seem to me well
like the upper

series.

If you have any
chance to get any good
perfect specimens from
the Vancouver Cretaceous
they would be very
useful.

I have just read
your Report in the
last third vol; and
am greatly pleased
with it. It is
very able, clear
and satisfactory.

I am sure you would
have your power to
writing into more
popular & widely
accepted channels than
Reports.

We all send
ourselves love and
good wishes

Ever yours affectionately
Mr Dawson
