

Suppl
to Silobates

M. Gill College.
Montreal.

June 19/88

Dear Sudge,

Dr Andrews of
Chicago sends me
sections (photographed) in
the "Kettle moraine" 23
miles W of Chicago was
being cut through by
a railway. The general
section is thus

He says the whole

Map is stratified but
very irregular, and
with irregular alternate
layers of strong clay, gravel
and sand, evidence water
settling and some other kind
of action which he does
not seem to understand,
but which may belong
to the category of ice-floes;

If you are not
to come down before
you leave, and have

time to look at the
matter, I can send
you his letter; but
I do not see as
it might slip you
or you might not
have time. I suppose
your papers on the
written draft have
some reference to these
structures. Sincerely

like them I think
I saw where the
railway crosses the
Munich steamer on
the C. P. R.

I do hope we
may see you once more
before you go,

Ever yours

J. M. Dawson
