

293 University St
Montreal.

Dec 28
1894

Dear George,

I have received
Dr Boas' paper, which
has some very useful
facts. I shall duly return
it, I also have
Lynch's letter & photo.
The plant is not
Noeggerathropis robusta, but
a fine cycadaceous leaf,
new to me, and
supper of genus Podocarpus?
ites is Sphenoxanites. The
photo is very good and
different for the general

form, but if he
can send a single
specimen, if he has
any fragments, this
would enable it to
be described. I shall
retain the photos,
in the mean time.
There are no doubt
many other new things
yet to be found at
Navajeros. I enclose
Mr. Taylor's letter, also

a slip which you can
send to him & save
writing.

We have had
a very severe storm
and great cold, which
makes mamma buy
to get back her
fur collar.

Love from Mamma
Your ever
Madame

a stop about for some
years & then

Writing

At home had
a very severe
and great cold, which
wastes numerous
of the best
for culture,

For four
from me
W. H. H. H.
