

15A

L. Meter,
June 27/95

Dear George,

I received the photos all right. They will serve my purpose very well. One feature which they show as imperfect, is the breaking of the granite layers when the schists stretch unbroken, just as we see in the sandstones and shales of the

Quebec Group I have
 in my rough sketches.
 I thank you for the photos very much.
 Cuyers' papers are
 lined all right. I hope
 he did not give you
 trouble in looking for
 them.

Curial seems better,
 and though up to
 day when the wind
 has changed, the
 name had only cold
 east wind, rain, and
 fog, he does not appear
 to have suffered. We

Quebec Group I have
 in my rough sketches.
 I thank you for the photos very much.
 Cayenne's papers are
 lined all right. I hope
 he did not give you
 trouble in looking for
 them.

Conrad seems better,
 and though up to
 day when the wind
 has changed, the
 name had only cold
 east wind, rain, and
 fog, he does not appear
 to have suffered. We

are now looking for
better weather.

I am sorry I did
not see Boyd; but
one going to Metz
presents me seeing
many strangers.

I have just received
through Prof. Furt the
Diploma of Honorary
^{Fellow}
~~Membership~~ of the
Royal Society of Edinburgh,
a recognition from
Scientific friends there,
which I much value

shortly after the 1st
 July I shall have
 to remit you \$100
 for half-year interest
 of Auburn bonds. I
 leave these and my
 own with Managers
 of Branch of Bank
 of Montreal, and
 on receiving his notice
 of payment shall send
 you cheque.

I contemplate, at
 beginning of next
 week, a run to the

Liggins, where I
am told some
interesting things
have turned up.

I need a companion,
and may take one
of the Harrington Girls.
I wish you could time
your work so as to
go; but fear you will
be detained in Ottawa
till the tides have swept
all the Spring-falls of
the cliff away.

Mamma and I
