 ARCHIVES
 ACC. NO. 909B/10
 REF. 29

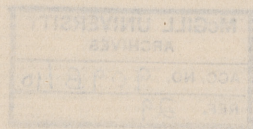

293. University St.
 Montreal.

May 23/98

Some unhappiness by the outgoing, I wish you
 could have a good one. But do not ask you to
 come into the city, I
 know what the
 weather is worse
 than ever
 Mrs Dawson

George,

I had a kind
 from you by Anna
 yesterday, & have not
 been able to write you
 some days, so had better
 regard myself as in your
 debt. I see the R.S.C.
 is in full blast this week,
 and hope the meeting will
 be a good one; and that you
 & your colleagues of the Saturday
 will have time to enjoy it,
 The very ^{me} warm
 wishes

University of Michigan
Ann Arbor

I have seen in Mr. G. Wittay,
who called yesterday, and
Harrington has been able
to furnish me for a day
in two,

I am sorry the California
man Edman has gotten
uncertain a find; but it
may show into how strange
places Jones may get.
Have you seen Walcott's
late paper in Bul. Geol.
Soc. of America, on
Pre-Cambrian fossils.

The West, I have not yet
learned the many new
local names he has
given them; and the
 fauna so far does not
seem to add very much
to the little known before.
I hope the Canal Survey will
keep a good look out
for these early beds and
the remains they may have
on one side of the line.

Boulton has sent me
a little paper of his read
before the Ottawa Society in
which he seems rather

In descent the evidence in
favour of Laminarian
Conglomerates, which are
certainly not very numerous
so far as known but still
I suppose actual features
though much disturbed &
altered, especially where
are some in the upper beds
in the Ottawa district. See
my papers on Lotoson in the
Geological Magazine. But
I must not run back to
these subjects. Give my warm
good wishes to the Society
and to each of my old
friends as you may meet
either come home by
St Agathe. This morning I was
laminous edible sugar. Both
