

Charles  
Feb 6/99  
Acc. 926

Dear George,

We have had  
two damp, <sup>(terrible)</sup> dismal  
days, in one of which  
Mother found it necessary  
to keep her bed, from the  
onset of her cold,  
apprehension of  
I hope she may be up  
tomorrow, as it is now clear  
though cold.

I have a letter from  
Coleman mentioning another  
grant of £30 from But  
above for Pembroke's fees  
and during the whole

for Toronto & Scarborough,  
 I have suggested that King  
 should be spent on the  
 Ottawa clay under  
 Penhallow & Amiel  
 on both on the Committee  
 This is the more necessary  
 as the Am & Scarborough  
 beds are evidently quite  
 upper Pleistocene, gradua-  
 ally perhaps into Postglacial  
 or early Modern or Culman  
 is evidently inclined to  
 adopt the foolish subdi-  
 vision of Chamberlain  
 or ~~Leitch~~ which are  
 of local value, and

Does not understand the  
 great Mesozoic storm  
 which applies to all  
 North America, as I  
 have shown for the L&L  
 Lawrence region and for  
 better for the west  
 The San beds with temperate  
 flora must be like the  
 English lark clays and  
 may get a good measure  
 of early man and  
 his contemporaries. The  
 Ottawa nodules hold the  
 brackish flora of the  
 early Pleistocene, when  
 the climate had cooled

down to its lowest,  
 and an example of very great  
 interest. It can be used  
 to get a good quantity of  
 material when the user  
 is in a hurry, very  
 valuable diseases might  
 be made, and we  
 should be better able  
 to give the advice  
 during the of the  
 American Resolutions against  
 the failure of US Government.

I think you should  
 come to be in Toronto soon,  
 if for you might see  
 Coleman and discuss the  
 substance

of this letter with your  
 please also to say to  
 him that I have sug-  
 gested there were to  
 Reubellon & Coleman  
 say since that I shall  
 agree to any some of the  
 money for Ottawa this  
 will all agree to, but  
 have asked for me half  
 and have tried to  
 impress the great importance  
 of the old boreal flora  
 of the Ottawa clays.  
 I write this with great  
 labour & effort, and I  
 fear at some work  
 with all love from  
 Mother & self yours even  
 J. Dawson
