Montreal.

June 2/99

Dear George,

We are looking on
passages for Louis Meles for
Wednesday next June 7,
in hope that workmen's
strike will be settled before
that day, I am of
opinion to be taken with
the party, trusting that the
change may do good, if
I can survive the journey,
which Dr B thinks probable

Can you run down
to see us in - manner
or if not can you pay
a little bit to L Metc
at an early date,

Lambe has returned
the cover I lent him for
study and promises to
send a paper & figures
of structure now in the
prep. They may be sent to
the address on this sheet
or to care of E. Adley at
the Redworth Museum

I am glad in any
case to have the seals
and the 218 marks
on them already received.
Seals of these types are
found in the L. C. of Nova
Zeland - the prevalent forms
being of later Cook's types.

Mother seems the
better of her little trip
to St. Agathe; but has
had very hard work in
the recent warmer weather.
I have run down a little,

but she have hope of
February the summer at
I. Metis.

May God's blessing attend
you and all your work

Ever yours

J. M. Dawson
