

Kensington Palace.

29 Jan. 1884.

My dear Dr Dawson.

Many thanks for
the Bracon specimens - but they are
not of the kind I meant. I send
a specimen of this mail of the type
'marth' - It is often pinker &
with ~~less~~ fewer spots, & I saw
a small piece at Montreal in
McClell University Museum which
was exactly like our pinkest.

5020 5002

Perhaps in the Spring
another specimen might be
procured like the type suitable
for the place indicated in
the case at Montreal?

Your best report will have
the greatest interest for me -

His
~~next~~ year I suppose you will
be excavating Saurian
in Alberta, I like to show
the Os. As the people have of
the results - Column of the
Canadian Press is lecture
generally on what the B.A.
will see, but I fear his
scientific knowledge is not

Equal to his knowledge of
Diplomacy & Politics - of
them that he knows a great
deal.

Believe me

Yours truly
John
