

4 Addison Gardens
Kensington 11th Jan'y 1886

Dear Dr. Dawson

Pray accept my best
thanks for the two very interest-
ing pamphlets you have so
kindly sent me, one of them very
recently, namely, Boulder clays,
the other of older date -

Superficial Deposits & Glaciation
of the Districts about Bow and
Belly R. which I have read
with much interest. The
angles of the great boulders
being worn smooth and glossy
by the buffalo rubbing against
them is a curious fact,

Major Greeley gave us a very long address before the Royal Geographical Society, the day before he left for America -

He expressed sundry peculiar views regarding a good many things seen by him in his ~~in~~ tour respects - Desartons Expedition - Sir Geo. Nares was present and was very evasive at some of Greeley's ^{statements} to which he might have replied much better than he did -

My wife joins me in very kind regards, and we both hope to have the pleasure

of renewing our acquaintance
with you this summer, when
I suppose you will come, to
be present at the British
Association Meeting—

Very truly yours

John Rae

Dr. Geo. M. Dawson D. S. F. G. S. &c
