

Natural History Society of B. C.

Victoria, B. C. 25th March 1901 19

The Natural History Society of British Columbia, feeling the great debt the Province of British Columbia owes to the work of the late Dr. G. M. Dawson, C. M. G., F. R. S., wish to express their sense of their loss through his lamented death, and their feeling of sympathy with his bereaved relatives.

Dr. G. M. Dawson for upwards of twenty five years took the keenest interest in all scientific matters pertaining to the development of the Province. In the departments of Ethnology, Geology, Geography, Botany and Zoology, he made extensive and valuable discoveries, and took every means of disseminating the knowledge gained in his explorations by his writings and lectures.

When the formation of this Society was first mooted Dr. Dawson took the liveliest interest in it, and has ever since maintained a close relation with those members who have been studying the subjects with which he was identified, and has also materially assisted the Society as a body by valuable donations of papers, Proceedings and Reports.
