Drift
w.
Port
Arthur.

Drift. The red drift in gory west from Port Arthur quite prominent for many miles. Generally fine & earthy-looking, but sometimes stony & with boulders & prob. a boulder-clay. Further west the ordinary yellow & yellow-grey drift comes in. The line of junction is not sharp, red drift continuing in places as far as Nordland Stn, though some miles before that place ordinary yellow drift much more abundant. The grey drift forms ridges & terrace-like flats, against which or between them at lower levels red drift. The red drift still earthy though apparently in some places with a few boulders. Cannot be quite sure that the red drift may not have accumulated round these boulders. The yellow

June 5: Completed preparations & left Ottawa In British Columbia by 12:20 (night) train. McEvoy with me & Dowling also on way west.

June 6. Westward by C.P. Ry. Tyrell joined at North Bay, where we had to wait a couple of hours to connect with train.

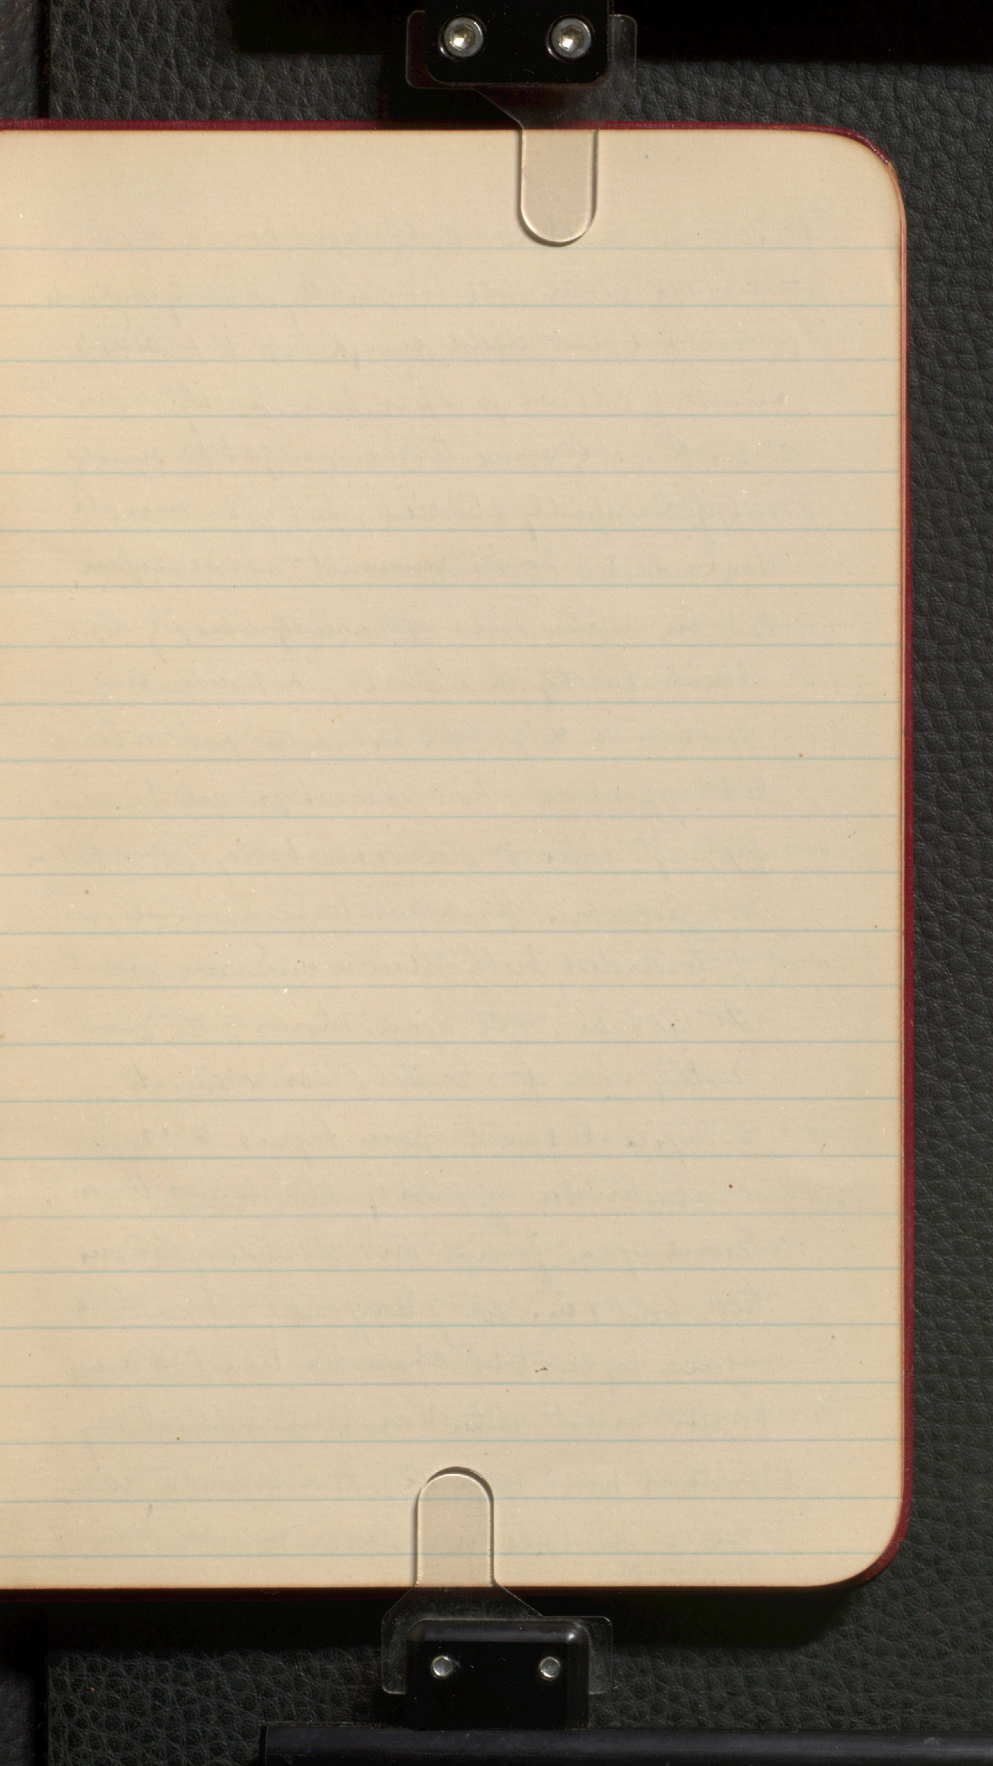

June 7. Had to wait till about 11 am for breakfast, having left dining Car behind last night. Struck some fallen rock in a cutting a few miles before reaching Scheiber, but little damage done & got on again after slight delay. Take a number of passengers & another pullman at Port Arthur, the steamer having just arrived.

June 8. Reach Winnipeg & leave there again 1:20 P.M. on westward. Tyrell & Dowling stay at Winnipeg.

drift gravelly or bouldery, often
pecked with many & large boulders,
sometimes distinctly strat, but more
usually showing little apparent
strat. The stones mixed with much
sand & earthy material & in
some cases at least probably
representing boulder-clay.

all along to the S. of L. Superior, till
reach the hills on rocks, the ordinary
yellowish grey drift of same character
as above described. A few banks
show grey clayey & stony material
which may be true boulder-clay,
but the great bulk of deposit seems
a less rounded stones & boulders
imbedded in sandy & earthy material
& occasionally distinctly strat. No
general spread of anything that can
be called boulder-clay in this
Laurentian region.

Coteau June 9. On approaching the Coteau, prairie
gradually rising & becoming more
undulating. Surface soil a sandy deposit,

which in shallow cuts seen here & there
to lie on either B.C. or gravelly & stony deposits.
(These not cut deeply enough into to be sure)
Limit of coltan proper here pretty definite
to E. Possibly some terracing might be made
out if carefully studied, but if so much
degraded. To its summit at Secretan
cuts in Coltan hills apparently chiefly B.C.
Much earthy material, not like true
moraines & if dep. in water not on beach,
but off shore. No apparent gravel beaches.
Dipping down to Old Wives valley at abt. 1 m
W. of Secretan reach great accumulations
of rounded pretty clean & uniform gravel.
At 448 m. B.C. again shows, the gravel
resting upon it. Gravel finer & much
superficial sand again begins, & is
characteristic of floor of Old Wives basin.
Gravel again found on W. side of basin
tile about 1 m. W. of Renfold, where B.C.
again begins to be characteristic. Old Wives
basin must either have been sheltered bay
(sheltered from heavy ice) or a separate large
lake. In B.C. everywhere much rounded
material.

June 9. Travelling westward on C.P. Ry.
Heavy rain this afternoon north of Cypress
Hills & evidence of same all the way
west.

June 10. Reach Kamloops at 10.30 &
leave McEvoy & Kirkpatrick there, while
I go on to Vancouver, returning Friday
or Saturday. Very fine day & good view
of mountains, including Selkirk. Saw
Col. Baker & Mr. Harpole at Rogers Pass
station & Mr. Mara at Revelstoke.

June 11. Reach Vancouver this afternoon
& Hotel Vancouver. No word of
Bowman. Wire to Anacosty & Fido go
but can learn nothing as yet, but
this morning clearing in B.C.

June 12. Go with Vaughan to see some
Spaniards from mining at Copilawo Ch.
Call on Abbott but find him out.
Bad headache most of day. Get
telegram from Bowman from
Anacosty in which he promises to
be here on Saturday! Very provoking
to have to lose so much time.

Rocks & heights along Ry. W. of Donald

Memoranda along Ry. June 10, 1890

Heights by Bar. no. 271.

Donald. (norm) 2540'

From Donald to first tunnel, good exposures of 'Castle mt. Schists'? Hence little rock seen along track to second tunnel, near & in second tunnel black claty rocks like Grafto. schists, but more or less mingled with grey. Then followed by rock which possibly limestone, near 44 1/2 m.

Beaver. 2420'. Beyond, grey & greenish schists in Cañon of Beaver. On edge.

6 Mile Ck. 2600' The wide upper valley of Beaver begins about here.

Beyond 6 m. Ck., much quartzite seen in cuttings.

Bear Ck. 3560'. Rogers Pass 4070'

Summit grade 4190'. Glacier (2 1/2 m. Run)

3990'. Ross Peak Siding 3430',

Illecillewaet 2710. Albert Cañon 2480'

A decided drop in valley below Illecil.

but no continuous well marked wide

valley above. At Albert Cañon, stream

* falls down suddenly from level gline to

June 13. Telegraph to Bowman & to
Mr. Eddy, asking permits to bring geol. map
of Westminster district, latter to get 2 weeks
supply & that would be unable to leave till
Sunday. Go with Mr. Vaughan in rig
to Stanley Park & spend some time
examining rocks & collecting fossils on
shore. In latter part of P.M. examine
cores from Hastings boring. Evg. see
Dr. Lawson.

June 14 Leave station about 8.30 am
& go out to Woodville on hand-car
examining cuts along railway line.
Get back by train arriving at
Vancouver 2.30. Various errands
about town. Collect a few fossils where
cutting made for water pipes in city.
Bowman arrived about 8.30 P.M.
Had a long talk with him & wrote to
Dr. Selwyn. Morning cloudy
but very fine in P.M. & evening.
June 15. Pack specimens, write some
letters etc. Leave by 1 P.M. train for
Kamloops. See Mr. Good at North

bottom gorge,

Albert Cañon Station 2240'

at this station a considerable flat, &
below it (abt 2150') valley markedly
narrowed, but cont. for abt. $\frac{1}{2}$ m. only.

Below this for considerable distance,
valley moderately wide & wide & on
whole widening, till at 382 m. (B = 1600)

Rather abrupt rocky fall & river canon-
like for abt. $\frac{1}{4}$ m. Then reach head of
delta-flat.

Revelstoke 1510' Bridge 1495,

Si' canyons (grade say 10' above lake) 1200'

Bevd.

16 June. Arrive Kawloops about
4 am. To hotel but find all full
though secured a room in a neighbouring
house. Very busy all day getting packed
& preparations made for start tomorrow.
Heavy rain in morning. Five in P.M.

17 June. Got everything ready to make a
start after noon, but raining heavily & steadily
all day, so decided to wait till morning.

18 June. Before everything packed & ready it
was 11.30. Stormy weather. Travelled
southward on route for Fish Lake &
Camped early at crossing of Joeko Lake, about
1 1/2 miles below the lake of same name.
Overhauling stuff & getting in running order.
Examined rocks in vicinity. Day very
unseasonably cold for June.

June 19. Up early & travelled south to
Fish Lake, getting there early in P.M.

After lunch M.C. & self went off in
different directions to examine rocks.

Day chilly & stormy, but clearing &
froty tonight. Camps in a pretty little

Indian story

on the trail from Rawlroops toward Fish Lake, about a mile north of Jacks or Peterson Creek Crossing is the scanty remnant of an old stump protruding with a few stones piled about it. Indians in passing all make a little offering of some shred of clothing, tobacco etc. Several watches had newly been laid on the stump when we passed. The story attaching is as follows. - Long ago was an old woman who had neither husband nor children & was very lonely. For sake of company she got some pitch & made a figure of a girl which became her daughter. She told her daughter, however, that when she went into baths in the river she must not afterwards sit or lie in the sun to get warm. Here special orders the daughter obeyed three times, but the fourth overcome with curiosity & not understanding the reason of the order, she sat down on a stone in the sun to warm & very soon melted & ran away. Next the old woman similarly made a daughter of

Ind.

grassy hollow just below the end of
the lake & near a couple of Indian staves
where some Indians now are. Inquired
about trails etc with view to get best
plan for tomorrow's work.

June 20 Left Camp at 6:30 with Kirk Petrick
to ride outward along lake looking for
edge of basalt etc. McEvoy with Indian
going south across first ridge to visit another
lake. Got back about 11:30 & after lunch
moved camp, travelling north westward
to near Summit of Tshoo-whelo's Mt. Have
an Indian as a guide & get along pretty
well through one of bays badly mired at
a swamp. Camp late at height of about
5800' in damp tall woods of P. Coulteri.
The grass & bushes just begining to be
leafy up here. Callitris abundant in swamps.

June 21, after usual early breakfast, climb
a couple of hundred feet to Summit of
part of mountain nearest to us,
which is the S.W. angle of a wide
rough high pass. Got some photos,
& examined Coriaria, while McE. got a

clay, & this time told the girl she might
bathe & might scrub herself afterwards as
often as she chose, but must not scrub herself
in the water. Three times the Command was
obeyed, but the fourth she began to scrub &
soon scrubbed herself all away & disapproved.
Next the old woman made a daughter of
a piece of wood & told her she might
bathe seven times herself or do anything,
she pleased. Three times she bathed &
the fourth, as she sat on the bank of the
river with her back partly turned toward
it, drying herself she saw a fine large
trout jump & exclaimed how I would
like to have him for a husband again &
for three times the trout jumped & she
repeated the same wish, but the fourth
she felt something touch her back &
turning round she saw a fine young
man standing, who said you wished
me for a husband now I am come to
take you. She consenting, he took her on
his back & said not to open her eyes
till he told her to do so. Then he

board of transit angles. Weather
fine though partly cloudy in morning,
but gradually clouding up & becoming
showery toward noon. Back to camp &
after lunch, though still showery got packed
up & moved off toward Face Lake. On
trail a very rough forry swamps very
being owing to recent heavy rains &
much down timber. Had much difficulty
& delay in crossing stream which runs
into Face Lake. Eventually reached the
trail which runs along the valley to
W. of Face Lake & got a good camp
in a pleasant looking little meadow
at lower end of lake. See'd with a constant
resort of Indians. Fish-traps set in
the stream where it flows out of lake.

June 22. Start at usual hour & travel
down Greenstone Ck to meadow valley,
then up latter about 3 miles & camp at
suitable place to undertake a trip into the
country to S. to define geol. lines there. Day
generally fine, but rather cool. Clouding &

spraying into the river & dived toward
the bottom, but half-way down she opened
her eyes & then like a flash found
herself back on the bank. Three times
this was repeated, but the fourth she had
resolution enough to keep her eyes tight closed
till ordered to open them, when she found
herself with her lover in a fine country
somewhat like that which she had left.
Here they lived for some time & had two
children a boy & a girl. Other people
were there & when the two children grew
larger they were taunted with having no
grandmother & came to their mother to
ask why they had none. She ~~said~~ told them
that they had a grandmother, but that she
lived in the upper country, but said
that they might go up there & that
when they did so they would see
an old woman engaged in digging
roots on a hillside. That would
be their grandmother, but they might
go to her home & get whatever
they could find there to read. They

Saw light showers in evening. Rem. remain
in camp, keeping Sunday & looking after
Varnis Camp matters. See a fire back first
before reaching camp. Prosper took a shot at it
but did not get it. Son & our guide went
out early in P.M. & came back with two good
sized Goslings

June 23. Very wet morning & raining all am.

Very disappointing as a long day wanted for
work to Southward. Got away at 7:45 P.M., the
train being stopped & speed over six hours
to the South in rough wooded country, swamps
& hollows all day wet owing to great amount of
rain. Have to turn back without reaching
Edge of granite, which our objective point.
Indian bare away too much to westward
& going very bad.

June 24. Paid off Indian guide Joseph.

Started 7 am with M. L. & rode all day
in the country to the Southward, getting back
to Camp 5 P.M. Country very rough & much
bog & swamps owing to recent rains. Wooded
& here & there bad windfall. Much exertion
for small amount of information. Day

acted accordingly & on three occasions
having seen the old woman hard at
work went to the house & helped
themselves to food. The old woman, however,
saw their tracks & found that the
food had been taken & decided that
be one but her daughter's children
would visit the house in that way. She
prepared some strong medicine &
going to a stump said told it that
when the children appeared it must
move & appear to work upon the
file like a woman digging roots.
She then hid in the house & when
the children came the stump did
as told. The boy said there is our
grandmother at work let us go to
the house, but the girl thought the
woman was in the house. The
boy however went in & by a bye
enticed the girl also to go in. Then
the woman threw the medicine
upon them. It covered the boy
who at once turned into an ordinary

Ind.

generally speaking five, but one or two
showers in Pm. Young & another man
abr two sheeps on this creek killed in
at camp in evening. Hunting Cattle.

June 25. Sent packs on to Erenstone Ck, &
rode out to South of Meadow Ck, on a new
route with M. Evoy. Did not get very far, as the
trail we followed gave out & seemed no object of
spending more time. Back to packs for lunch, &
in Pm while M. E. took packs to camp at
Mouth of Witch's Ck, I rode across the
high point S. of Meadow Ck, separating it
from Guichen Ck., with Kirkpatrick. Got back
to camp about 6 Pm. Day fine & quite
warm at times in Pm. In 1888 we had a
Sunday camp on same pretty spot on which
we are now camped. Saw one deer today &
a coyote, which was shot.

June 26. Off at 9 am with K, riding south
down W. side of Guichen valley. Pretty rough
going in places. Back to camp 12.15 & after
lunch, leave at 1.15 riding out over hills to
Eastward. Find fairly good travelling. Get back
5.30. Take photo of camp. M. E. out all day

human being but w^h half of the girl's
body was covered & she changed into
a little dog. The old woman took care
of her grandson & the dog but never
told the boy that the dog was his sister,
she told him however to be kind to
the dog & never to beat it. The boy used
to shoot with bow & arrows & was
shooting red-headed woodpeckers
but three times having shot woodpeckers
the dog ran on & ate the birds. Then
the boy got angry & the fourth time
struck the dog & beat it with an

why do you beat your own sister

the dog before he could catch it turned
into a chickadee & flew away. Then

they sad & said why did not you
telle me that the dog was my sister,
but the woman said if I had told
you perhaps you would be was
sorrowful than you now are.

with Bona on Forge Mt, to north. Day fine
& pleasantly cool. No rain!

June 27. Travel up Litchies Cr. & along
Highland valley westward. Route same as
travelled in 1888. Camp at Creek at mouth
of which Wood & Campbell have a ranch. Intend
riding up this creek in ~~the~~. A fine day
& rather warm at times.

June 28. Rode up creek above camp with M^cL.
getting to a couple of ponds a warby lakes,
dammed in by beavers, at about 3 miles back.
Returned, finding that could not get much
more information by going further. After lunch,
packed up & moved camp about five miles
southward, camping rather early in a high
valch at the side of the great Thompson
valley, at a little pool with yellow &
rather poor water. Intend going back on
the hills a few miles, from here, before
going on to Spencis Bridge tomorrow.
Another fine & rather warm day. Fine
view this am of snow clad mountains
of Coast Ranges, perfectly clear.

The name of the place where this stump is, is Ka-
Wah'-Sa or 'Crying' as it is said nearly always to be raining when people pass as though weeping. The
Ka-kutl'-pie'-e'-hoo'-name of boy who ascended. The old grandmothers
is supposed to have been a grizzly bear.

Ind.

She told the boy that when he went shooting if his arrow lodged in ^{however little} a tree or anywhere above his reach, he must not climb a stretch up to get it. Three times he lost arrows thus, but the fourth he saw his arrow stuck in a tree a very little way above his reach & stood on a branch to clutch it. Then the arrow worked up & he climbed higher & though he thought that he had not climbed far when he looked down after a time he could not see the earth at all. So he went on climbing & the arrow still ascended, till he got at last into a country above which was very pleasant & where many people were & there he stayed. The stump first mentioned is the stump of this identical tree!

Ind.

Fish Lake (Pip'-tsutt or trout lake)
Indians say that the 'water people' or water people of some kind inhabit or did inhabit this lake, in the upper

June 29 Sent Kirkpatrick off to Spencer Br.
to telegraph to Kumbloops for mail, & rode
out with Mr. Eory up creek near which
we were camped. Found a good Indian trail
& got about 7 miles outward to look at head
of creek. Left camp at 7 Am & got back at
12.30. Lunch & packed up & left for Spencer's
Br. at 2.30, reaching there at 6.30 Pm, after
a long day. Very hot in pm, the first really
hot weather we have experienced. A strong
up-river wind however. Camped on stony
& sandy flat about 1/4 m above Spencer Br.
on W. side of river. Usual difficulty in
getting poles & fire-wood. Have been 9 1/2
hours in saddle today & what with the
heat etc feel rather tired.

June 30. Got mail this morning. Ordered
new list of supplies. Writing letters etc.
Very hot. Moved camp in Pm, leaving
at 4 o'clock & travelling a few miles
up Tzool valley to a more shaggy
place than the sandy flat occupied
last night. Pleasantly cool in the
evening.

part (have save as water people of
Adam's Lake) where when the Indians
go out spearing fish by torchlight they
can see in the bottom of the Lake a
cleft from which great numbers of
fish come out, but all half fish, the
tail ends wanting. Long ago the old
people used to catch these half fish
but the water is so deep that they never
spear them now. A similar story told
about the Lake from which Edwards's
Creek flows, with the addition that
the Indians have seen in five columns
but whether water people one or two
or more floating on the surface asleep.
Bona tells a most circumstantial
story of seeing & examining on two
occasions a snake with two heads,
which could & did run in either direction.
Purpure says he has seen these snakes
three times. The stories relate to the
S. Thompson above Kawloops chief fly.
To see this snake is very unlucky
& portends death of some relative or of

July 1. Travel on up Loyal Creek valley,
but eventually, where valley forked, became
uncertain as to which should be followed.
Continued by northward valley for a couple of
miles, looking for reported ledge. Decided to
Camp about 1 P.M. & after lunch Mr. Long
took one branch while South K., took the
other. My branch ran out in a couple of
miles into Kenable valley & being found that
the route good & that it would be our route
tomorrow, returned to Camp about 4 P.M.
The very bad a long trip, getting back near
7 P.M. & being been to look at head of
Green Park branch of Hat Ck. A fine day
& pretty warm at times.

July 2. Traveled northward through notch
& then down into Kenable Valley. Sent packs
ahead to camp & followed down valley. Camped
at point where it begins to descend rapidly
to the Thompsons. After lunch go out with N. & E.
to look for fossils in rocks above 89 m.
Stable, near mouth of valley, in which had
noted occurrence of fossils in 1875-76-1877
Made a considerable collection, but including

the man himself. It is called
Wha-tloo'-sil-i-kin. (Interesting
to compare with double-headed snake
of the Kwokwot, particularly in reference
to the idea that these people are of Solish
origin)

Legend

story of the Legend, which being seen
follows a man up a water by his
pendulum while he sleeps, killing
him, but compared to legends of the
bear Za-Kwot-Ki'nti, as formerly
supposed but told also of other legends
which may be seen when breaking
up rotten wood etc. This happened
formerly but does not do so now.

Formerly also the grizzly bear said
to have been a much more formidable
animal than now, constantly attacking
& killing Indians. This probably means
that the Indians are now better armed,
& possibly implies that the bears have
learned this fact.

few forms, & these not very well preserved. There are uncomfably Cretaceous look about them, but they must belong to a lower zone in the Cretaceous than heretofore recognized here. If they should prove to be Cretaceous it will be a difficult matter to draw lines. Day extremely hot, but evening pleasantly cool & a few drops of rain, the tail of a passing storm, with some wind, about 7 P.M. Hope to reach Spence's Bridge again about noon tomorrow.

July 3. Traveled down to Wagon road & then along latter to Spence's Bridge, skimming rocks by the way. Stop for lunch, get trail & a few extras needed & then continue down river & climb the mountain side south of Arthur's Seat. Very steep zig-zag trail & total country on 3000'. Camp at a little Spring House to Indians as 'Bear's Spring' on the W. slope of the mountain. Day rather hot in morning. but pleasantly cool in high country in evening. Fine view of the river & valley as we climb.

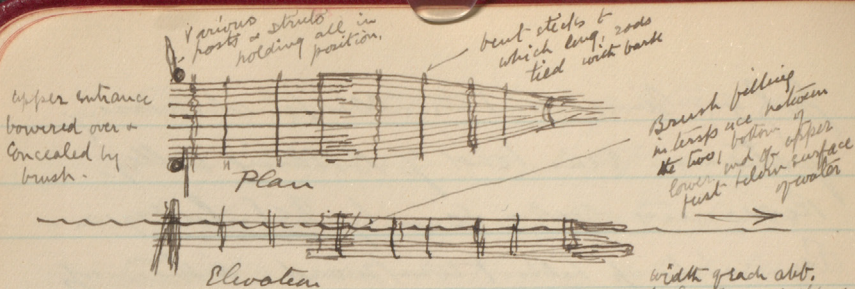

Bona says that a heap of stones etc
is on Whip Saw Ck, but far below
Powder Camps & on route from
Similkameen to Hope, which every
Indian passing has to 'pay' by putting
something on, such as a stone or twig.

Ind
Hunting grounds. The Nicola Indians
& possibly others, are said to have
hereditary hunting grounds, each
family having its own. This is formerly
the case also with the Kowloops
Indians, but the custom is now broken
down & all the Kowloops Indians
hunt indifferently or nearly so in
different parts of their territory.

Story that once a mosquito, gorged
with blood, flew up to where the
thunder is. The thunder asked where
it got the blood & the mosquito not
wishing to tell, replied that it sucked
it from the buds at the very highest
tip of the trees. Hence the circumstance
that the lightning (thunder) strikes
the tops of trees.

July 4. Went on to a camp of crossing
y stream near head of Botanic valley.
Reservoirs rocks seen by J. L. last year.

valley & northward, getting information
for boundaries of rocks. Rather disappointing
day in the whole, but still got some facts of value.
Several camps of Indians of here at
present, the women being engaged in
digging roots. A beautiful country. Flowery
meadows in the valley & many open
slopes of hills & mountains also covered
with many varieties of flowers. Wonderfully
luxuriant growth everywhere.

July 5. Called at Indian Camp after
passing & secured a man to act as guide
to mountain to east of valley which wish to
ascend, chiefly for purpose of getting information
about Coast Range. Traveled down valley some
miles, camping before town high up on
W. slope of valley where, according to our
guide we can start for summit tomorrow,
no time to occupy the mountain today,

A trough made of willow sticks tied together, leading into a second, similarly constructed, but with the branching ends of the willows tied together. So arranged (not exactly as in diagram, but fish running down stream pass over the lower edge of the first trap & collect in the second, being unable to get back without jumping out of the water. Indian not far off watching for them. The necessary weir or blocking of stream so as to allow fish to pass down into the trap, of course implied. This used when fish running down out of lakes. Called Mooh'.

also use, so they say, the regular cylindrical basket traps as used by

Even if atmospheric conditions favorable,
which they are not. Had in consequence a
rather lousy afternoon. Warming mesquite,
Rain & becoming partly clear & clearing but
unpleasantly strong wind, with showers in
the foot ranges down the Fraser. Cold &
dew.

Before we left Camps this morning, a number
of Indian women passed on way out to dig
roots, each with basket on back & a digging
stick. The stick has now often substituted
for it a pointed & slightly bent bar given,
with the usual transverse crutch-like
bevels slipped on upper end of it. Length of
stick or bar about 3 feet, of transverse
handle about 9".

our new guide an amusing old
fellow named 'philip'. Quite ready to
accompany us at a moment's notice.
Merely dived into his tent & reappeared
ready for the road with a large stone
(steatite) pipe & an extra pair of
moccasins.

Chilcotin etc, made of narrow bars of split pine  with covering spikes at entrance, have of this Pip'-ah,

The Salmon was such as photographed last year on the Nicola, called Sail-min',

Custom with respect to berrying, This is not done at random, but for each place known as a berrying ground, some

experienced old woman takes charge. watches progress of ripening & when full time, send word by messengers to the Indians, also then all collect & begin picking. The berrying is genuine woman's work.

Bows, were formerly made chiefly of Juniper wood (poontlp) also sometimes of yew (skin'-ik) which is said to grow & probably does so, some distance up the North Thompson. The bow was formerly often covered on the outer or convex side by a rattlesnake skin. Arrows were made of Amelanchier wood.

Said, & Prosper says he has seen, Chief Logan handle rattlesnakes with impunity. Also said that an old man

July 6. Got off immediately after breakfast under 'Philips' guidance to climb the mountain between Botanic Valley & the Fraser. Very steep zig-zag route till reach summit of ridge, which then followed a less severe gradual slope, to Columniating Point. All Am. very cloudy with heavy mists particularly on Coast Ranges, which remain ahead of the ascent. Made a fire in the lee of a rock & wait about. In P.M. clearing & at times pretty clear, so that possible to get all the information needed as well as half a dozen photos. Great work gain, but moderately warm & at least not immediately cold. Back to camp pretty late, having been away 11 1/2 hours.

winter The wind on summit with a SW direction & only moderate, while can see from clouds of dust below that the usual gale blowing up river there. Also find that has been blowing my hand from S in valley at camp all day. Evident that this up-river wind & lower current.

of Deadman R, deceased some years ago was similarly able to handle
Yellow Snakes, twisting them round his neck etc.

Battle Bluff formerly known as a haunt
of the 'Water People' (Same Ludi'an name
as applied to these people on Adams' I., etc.)

Canoes could not pass round the point etc.

Water people described as human, though
hairy, as to upper part, fish-like below.

The Bluff called Hoon-a-tat'-Kewa.

Ind. The story that some hostile Ludi'ans,
informant thinks Okavogans, were coming
to attack people of Kainboops lake vicinity.

Looking over the bluff, they saw below a
woman, in a witch of the bluff, dancing.

The woman probably a witch & said to have
been at her wretched period. The Ludi'ans
sat down along the edge of the bluff to
watch her dance & were there turned to
stones, which may still be seen.

In addition to other roots, the Indians eat
those of elaytonia or spring beauty, - as of
the dog - both violet or Adder's tongue.

July 7. Paid 'Philip' off & travelled
down Botanic Valley to Camp at
edge of river near bridge at Lytton.
Went on to town & got some provisions
& information about routes to be followed.
Then rode out some miles on road to test
to examine rocks. Return to town &

Climbed about 5000' above level of Lytton,
& camped rather late in stunted woods

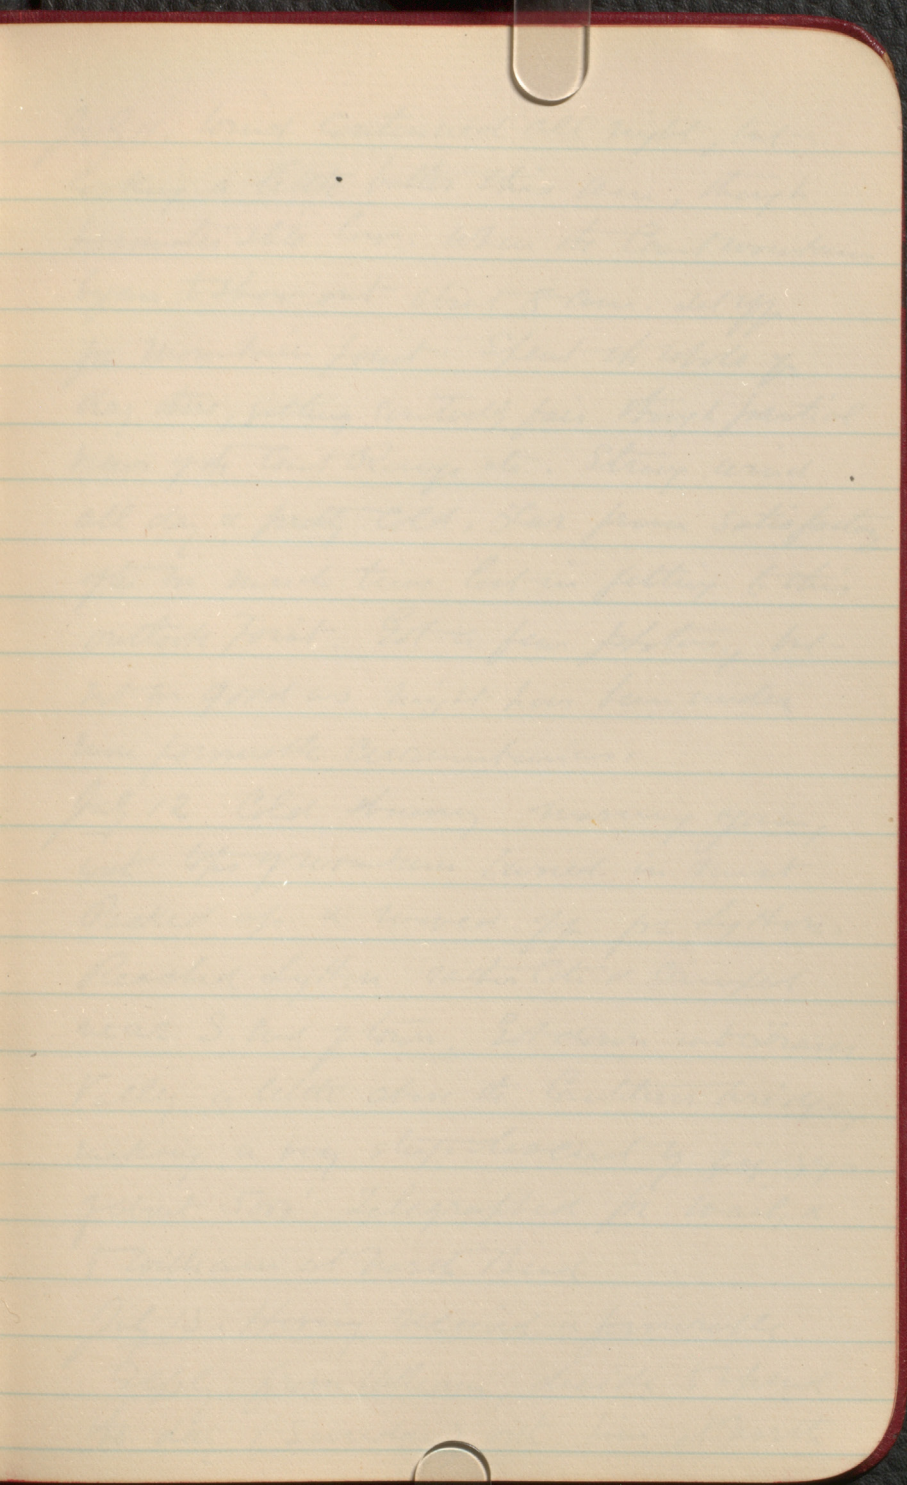

Indians eat root of *Bahomostiga*,
On enquiry find that it is dug in the spring,
when the rough barky outside comes
off easily. It is then roasted for two or
sometimes three days, in a covered
heap in the usual way, when it changes
from white to brown & acquires a very
sweet taste. The root is shaped like a
small spindly parsnip & when in the
New state has a unpleasant
leisure-like taste.

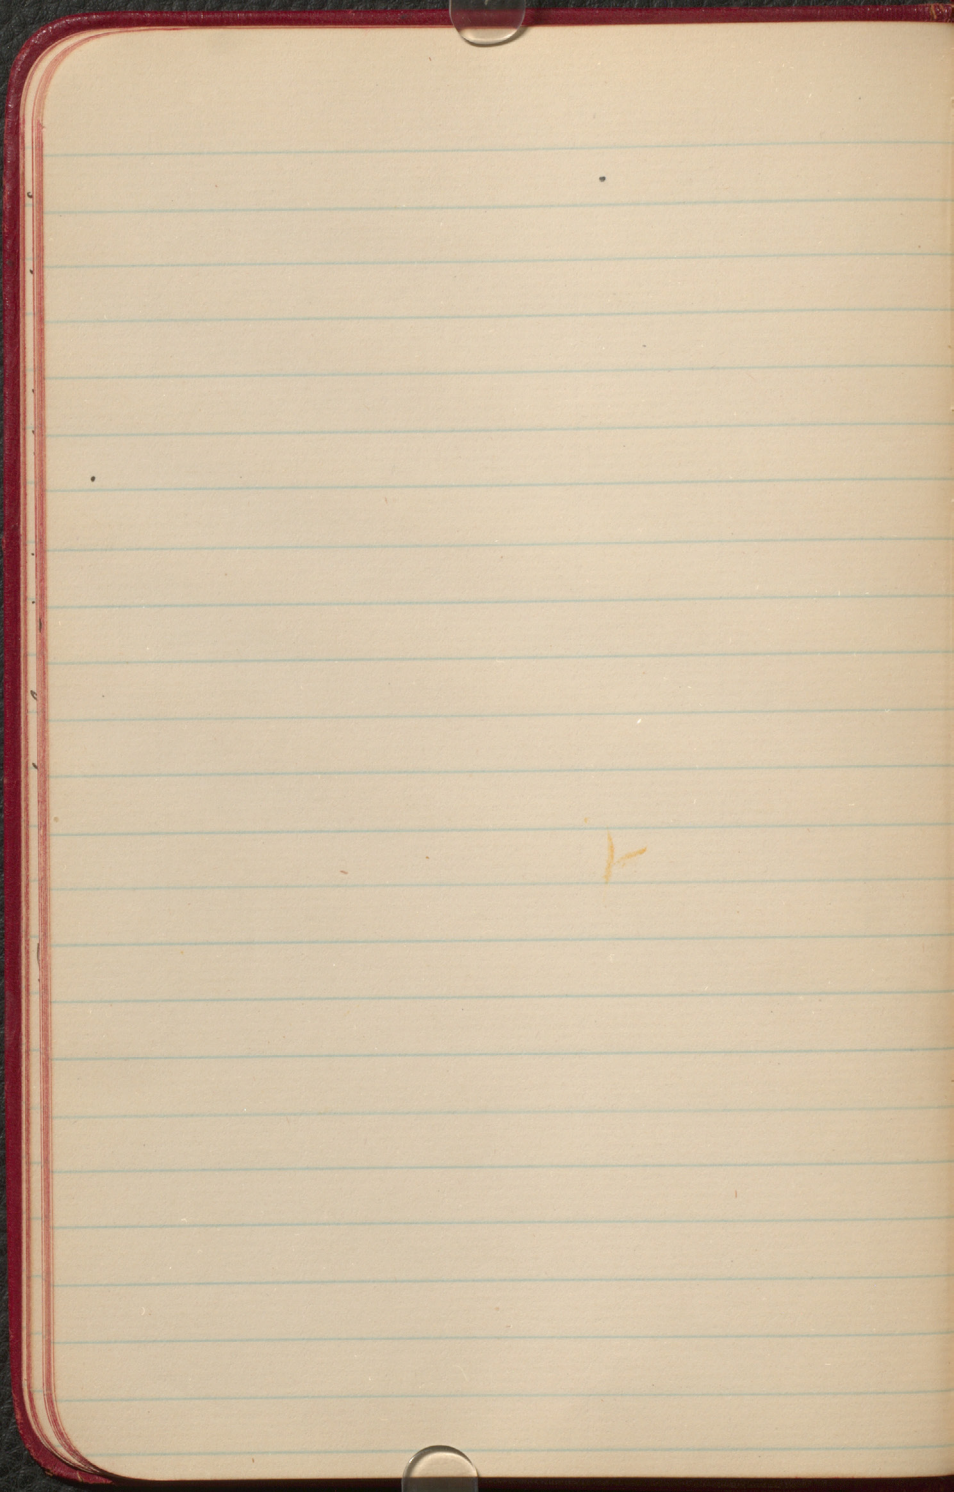

near points which it is proposed to ascend tomorrow. Very fortunate that we have taken this route as it turns out to lead exactly where teams of country wanted. A hard climb for the horses.

July 9. Off early with 'Tommy' for highest point of mt. to N.E., which turns out to be about 6600' in height. Took transit & Camera, but mist & flying clouds obscure everything. Build a fire a little below summit & make a shelter of brush, in which spent the rest of day, getting back to camp at 5 P.M. without having seen or done anything. The mountain top which we were on was almost continually buried in drifting mist. One little flurry of snow during Am. A long cold wait for nothing. Must return tomorrow.

July 10. Blowing a gale of wind this morning with clouds low & drifting fast over all, even the lower mountains. Evidently impossible to do any work on the mountain. Very cold & heavy in P.M. All day spent in & about camp. Reading, etc.

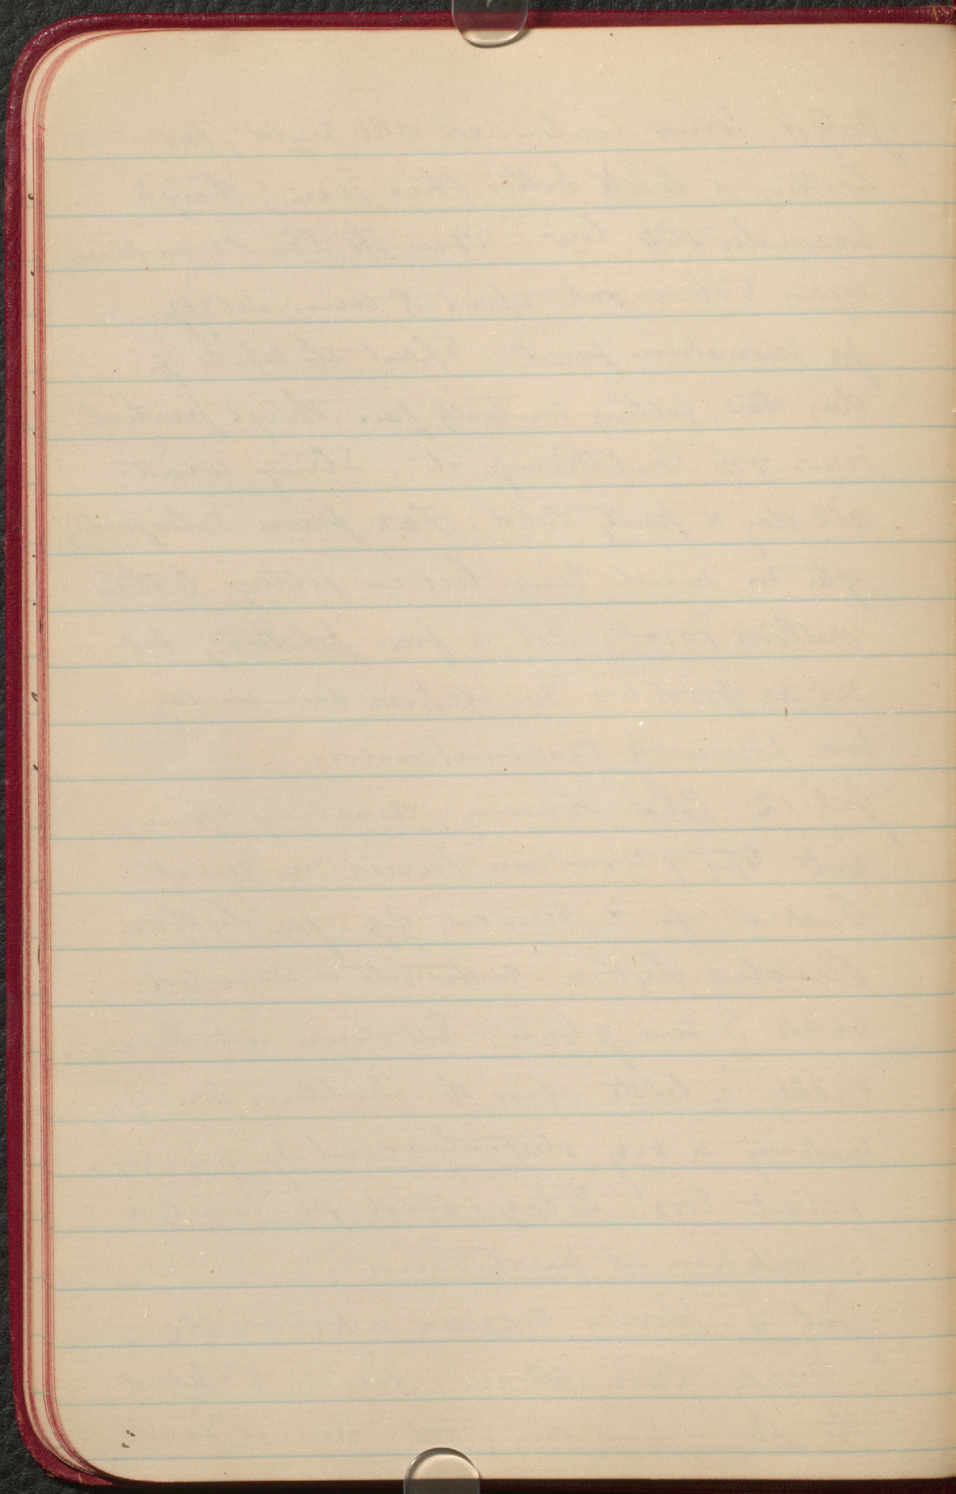

July 11. Wind continued all night, but looking a little better this am, though barometer still low. When the Coast mountains began to show out about 8 am. set off for Mountain Point. Spent the whole of day there, getting eventually fair though partial views of the Coast Range etc. Strong wind all day & pretty cold. Far from satisfactory after so much time lost in getting to this outlook Point. Got a few photos, but not so good as might have been under more favorable circumstances.

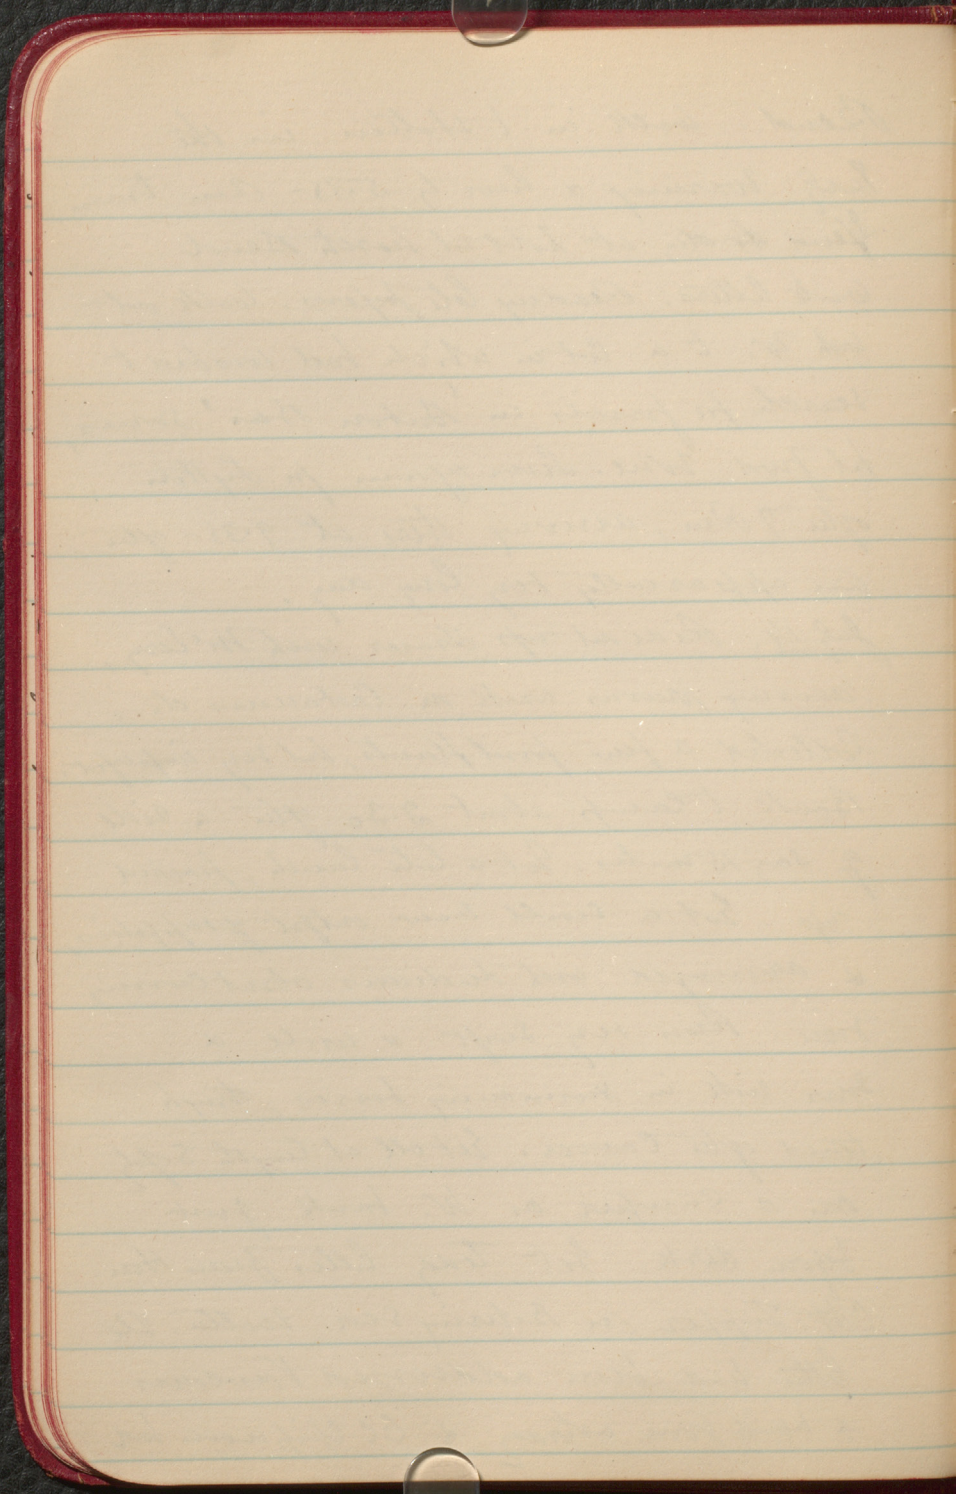

July 12 Cold stormy morning again, with tops of mountain buried in mist. Packed up & waved off for Lytton. Reached Lytton rather late & camped near S. end of town. Got down into Fraser Valley a little above the Cauldron bridge, making a very steep descent by zig-zag about 5000'. Telegraphed for mail, & to William at North Bend.

July 13. Having received a favorable reply from William, decide to spend the day (Sunday) with him at North

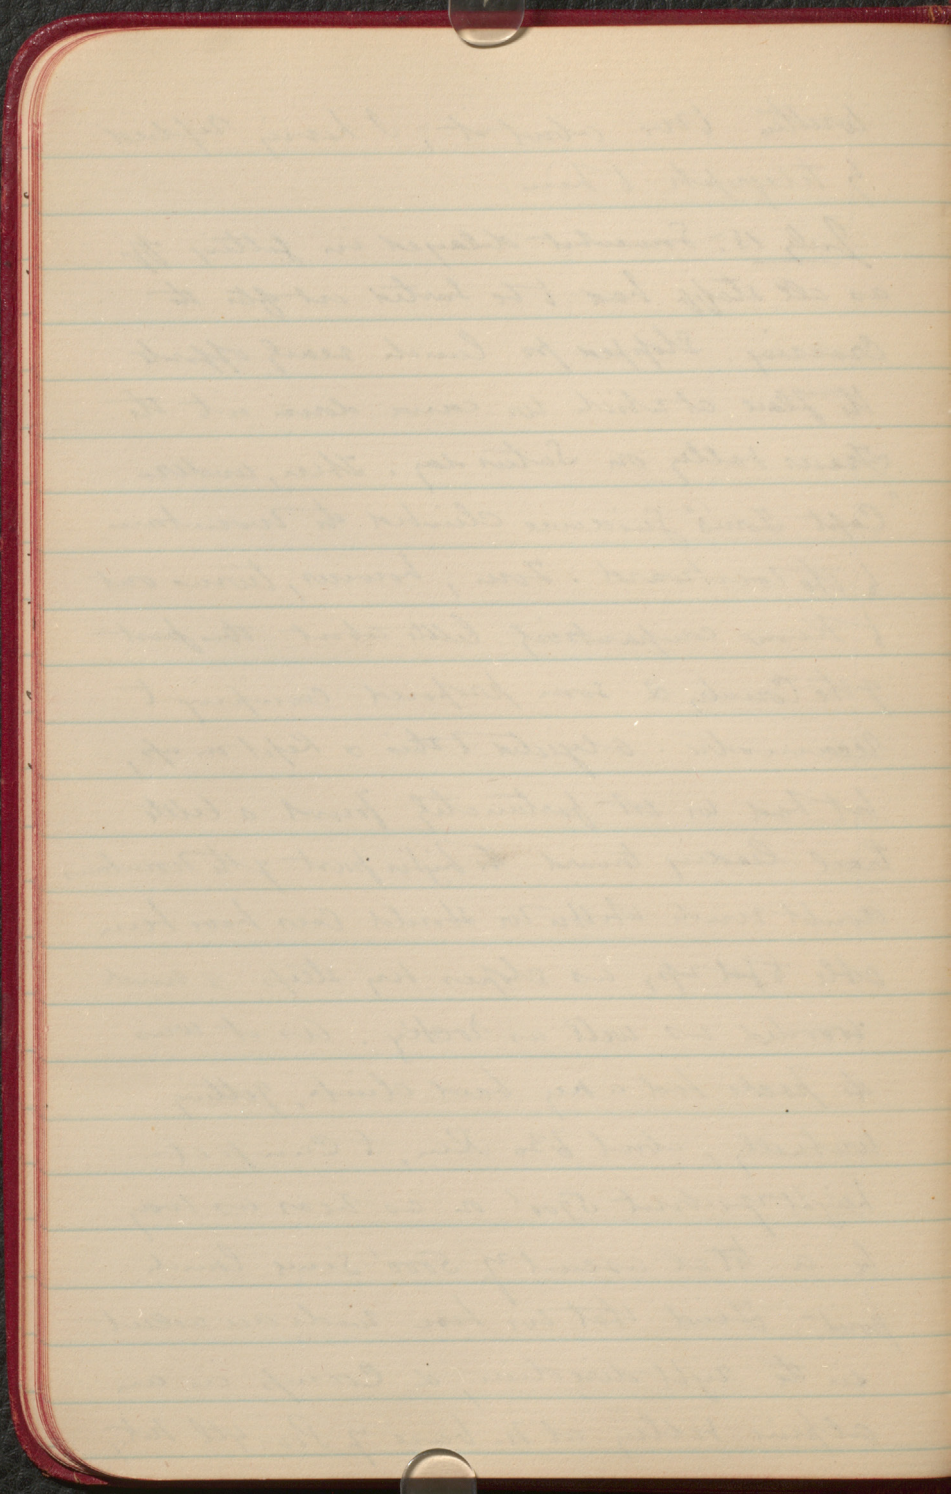

Bend. Walk in to station in the
Pearly morning & leave by 5:35 - Am train.
Spent the day at Hotel at North Bend.
Write letters. Reading late papers. Walk out
with W. to a lot in which had wished to
search for fossils in 'Anton Bar' series,
but find none. Leave again for Lytton
after 7 Pm, arriving there at 9:35 - after
an apparently very long day.

July 14. Ride out up Tracer with McLeary,
revising previous work on Cretaceous etc.
Collected a few fossil plants, but very imperfect.
Back to camp about 2:30 after a ride
of say 15 miles. Got a late lunch, packed
up. Got a small bear outfit of supplies,
& arranged with Indians about crossing
river. River very swift & wide &
some risk in swimming horses, though
traced after canoes. Got all at length safely
over & camped on W. bank just
before dark. Got today letter from Hon.
C.H. Zupfer on Behring sea matter. The
letter had been addressed Vancouver
& had gone astray & C.C. Chipman had

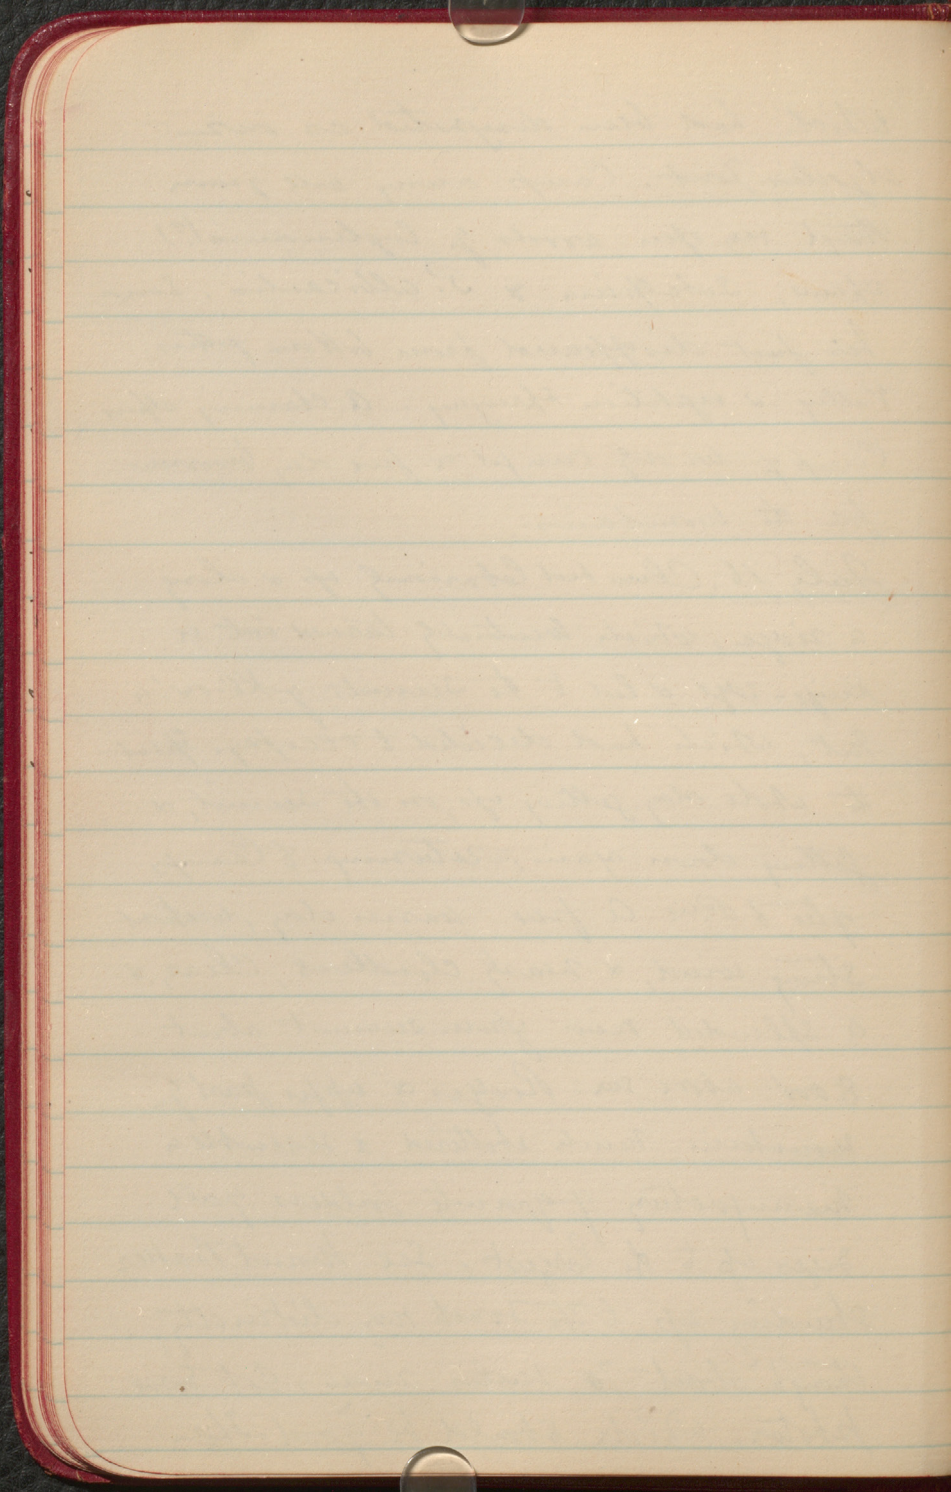

written to me about it, I having replied
by telegraph to him.

July 15: Somewhat delayed in getting off
as all stuff had to be sorted out after the
crossing. Stopped for lunch nearly opposite
the place at which we came down into the
Fras valley on Saturday. Then, under
"Capt Zorn's" guidance climbed the mountain
to the westward. Zorn, however, turns out
to know comparatively little about this part
of the country & soon proposed camping to
reconnoitre. Objected to this & kept on up,
but had we not fortunately found a little
trail leading toward the higher part of the mountains
doubt much whether we should ever have been
able to get up, as slopes very steep & much
wooded as well as rocky. As it was
the packs had a very hard climb, getting
started, about 6.30 P.M., to camp at
height of about 5700' or as near as may
be a total ascent of 5000' since lunch
point. Find that we have made an ascent
in the right direction, & camp in an
alpine valley at N. base of Poo-ytl Mt.,

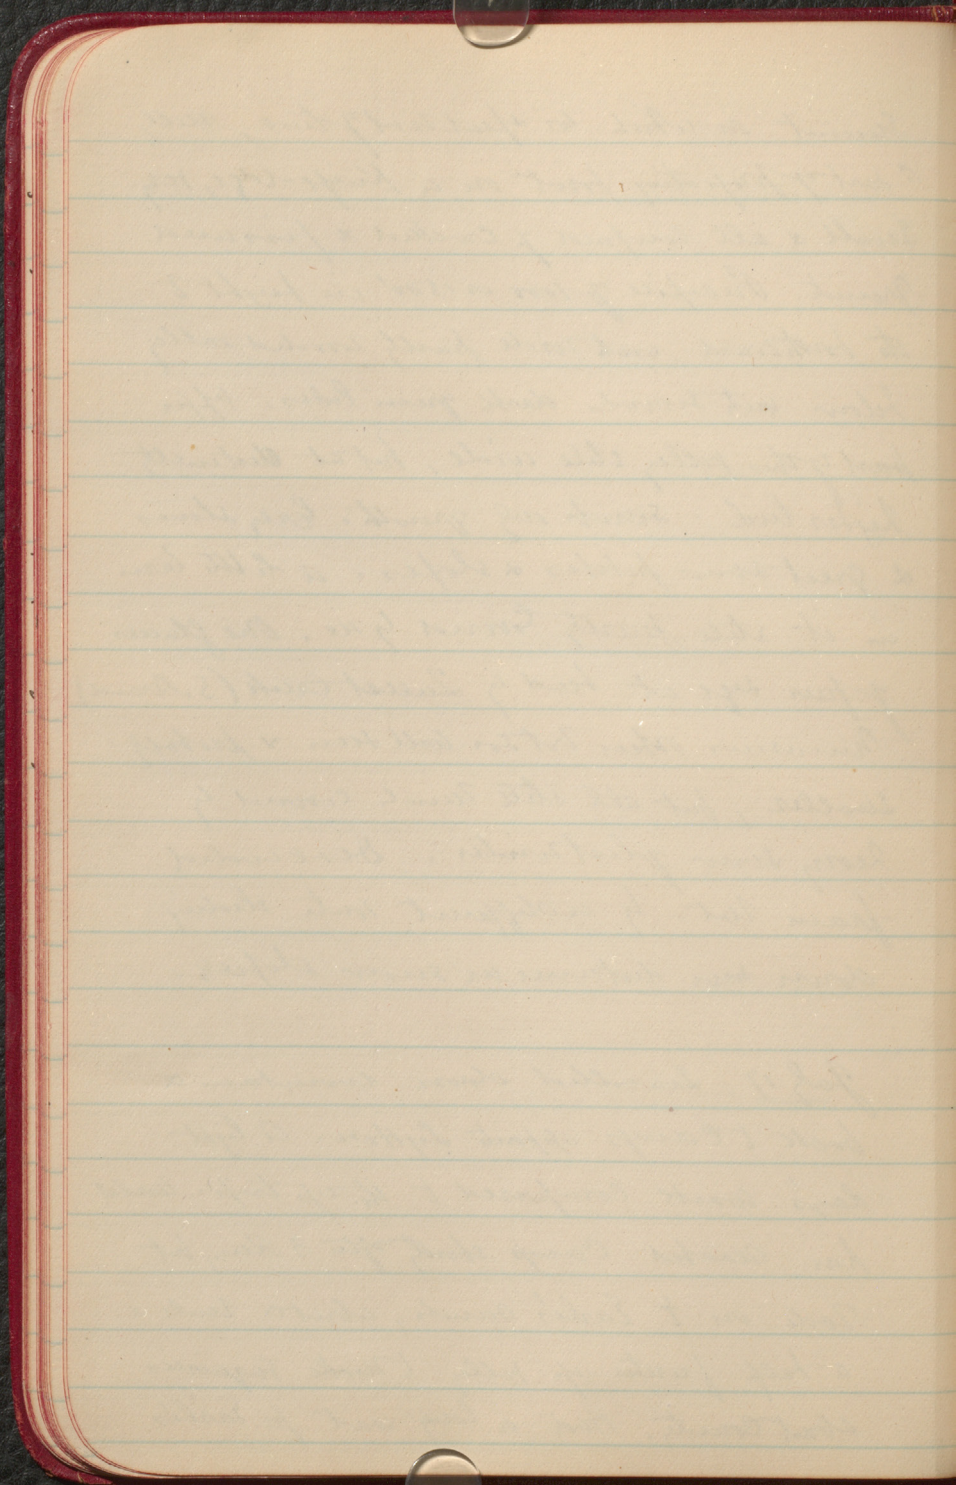

which had been designated as our objective point. Camp among well grown though very open woods of *Cuglenianus*(?) spruce, *Subalpina* & *P. albicaulis*. Snow has just disappeared from bottom of this Valley & vegetation springing. A charming alpine Camp of. We only camped a few days tomorrow for the mountains.

July 16. Climbed laboriously up & along a ridge, which eventually turned into a knife-edge & led to the summit of Kl-ov-a Mt., which had decided to occupy. Spent the whole day getting up, on the summit, & getting down again, returning to Camp after 8 P.M. A fine warm day, without strong wind, & nearly cloudless, clear, & a splendid view from summit about 8000' above sea. Ridges & upper part of mountain much shattered & resemble a manufacturing of granite boulders of all sizes up to the largest. See Mount Baker standing up to the South very distinctly, though about 70 miles away. Got some photos. which should be good. Then

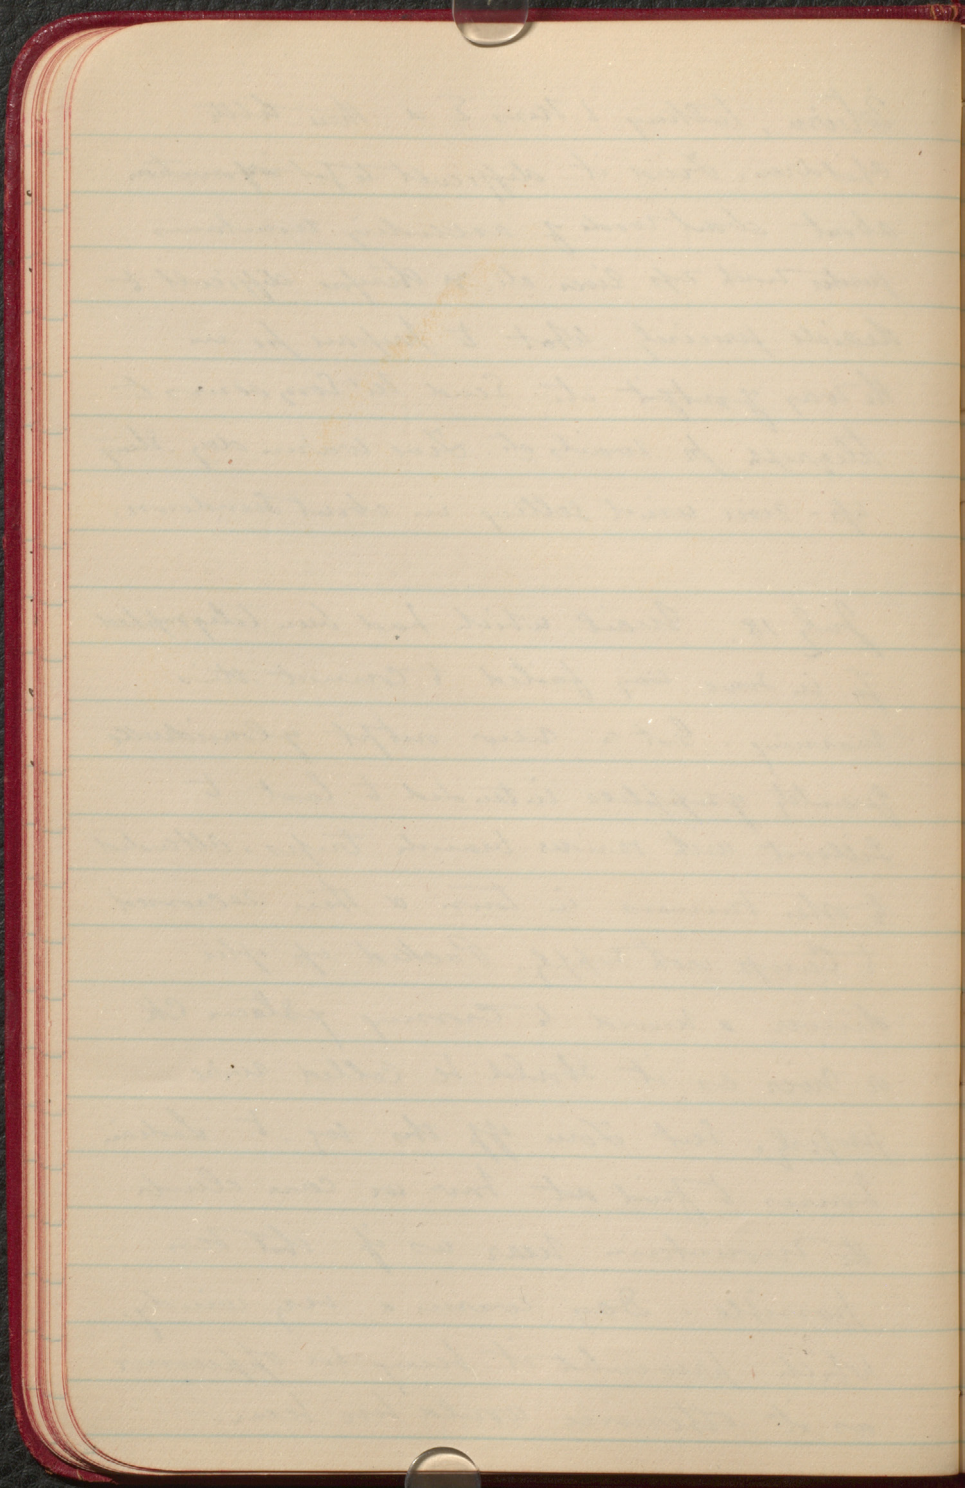

Summit on which we spent most of time, really
a sort of projecting point on a knife-edge, very
small & all composed of crumbled & fissured
granite. Precipice of 1000 or 1500' in height to
the southward, with wide partly wooded valley
below with several dark green lakes. Upper
part of this valley still wide, but at distinctly
higher level. Scrub only growth. Grey stones
& great snow patches & slopes. A little tarn
in it still partly covered by ice. One glacier
of fair size at head of Lulea Creek (S. Branch)
Numerous others but too well seen & probably
smaller, but all still much covered by
heavy snow of last winter. Descended
from Mt. by a different route sliding
down some distance on snow slopes.

July 17. Traveled down mountain &
back to Camp opposite Lyttan. A light
day's work compared to the up trip. Would
have reached Camp shortly after 3 P.M., but
rode on to Earle's ranch, about a mile &
a half further up valley to make inquiries
about country. Had a long wait for Earle's

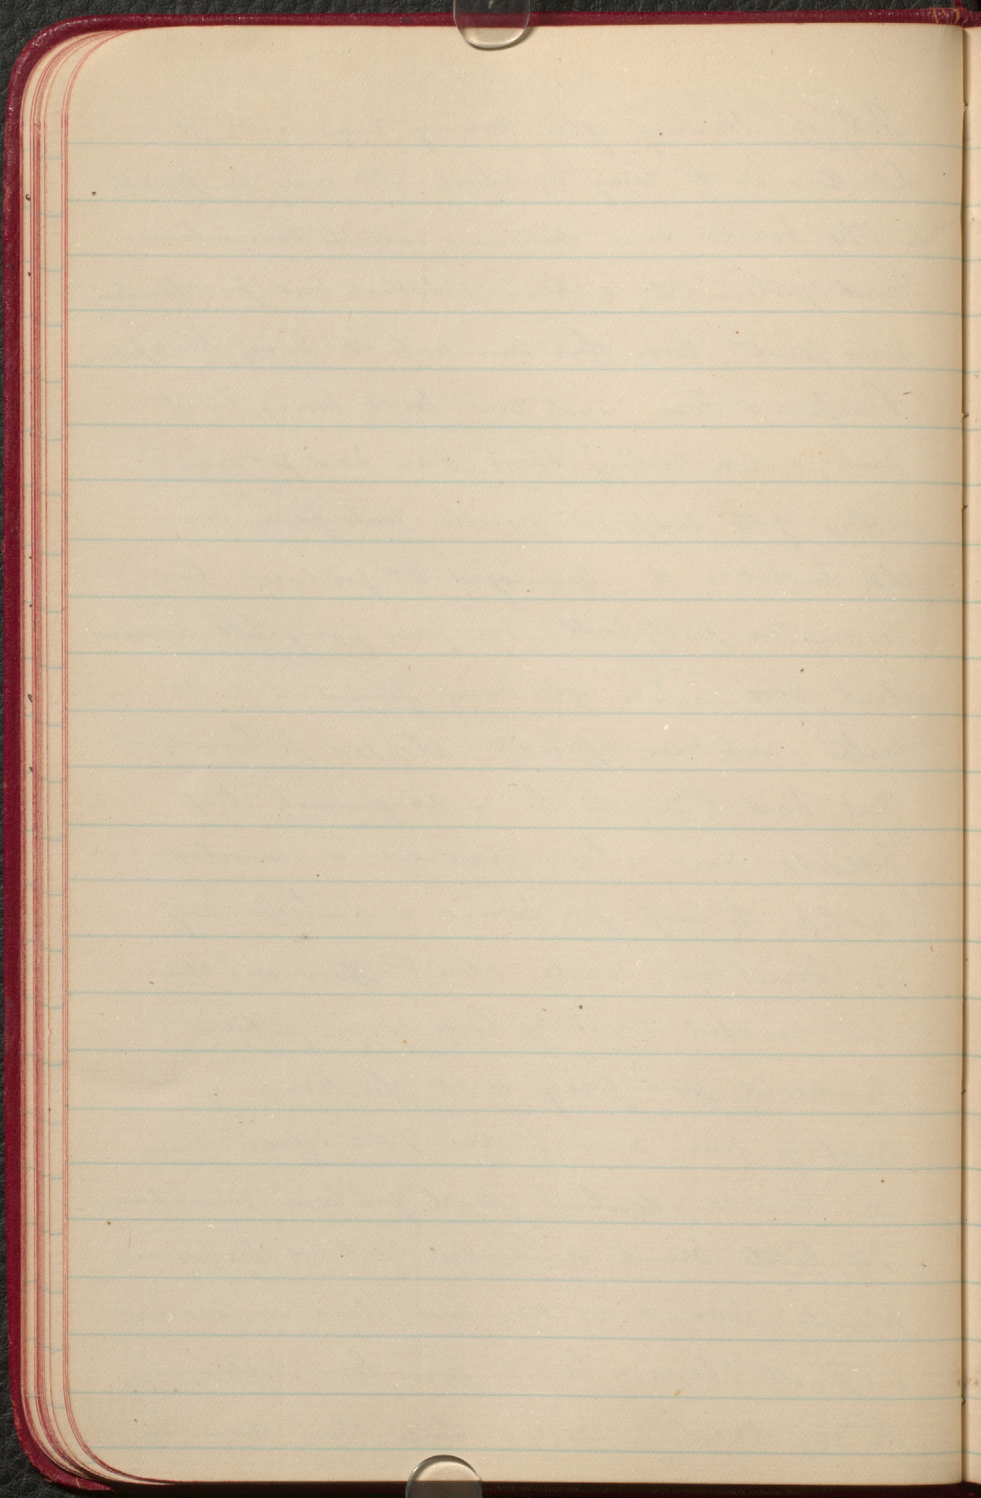

Return, talking to Mrs E & their little children. Find it difficult to get information about about woods of ascending mountains further north up river. etc. & therefore difficult to decide precisely what to prepare for in the way of outfit etc. Send Mr. Long, across to telegraph for mails etc. Fine warm day. Strong up - river wind setting in about sundown.

July 18. Mail which had been telegraphed for in some way failed to connect this morning. Got a new outfit of considerable quantity of supplies intended to last to Lillooet with various branch trips. Attended to other business in town & then recrossed to Camp with supply. Packed up after dinner & moved to Crossing of Stein Ck or river as it should be called more properly. Sent Tom off this morn. to Indian houses to find out how we can climb the mountain near us if that be possible. Day warm & very windy, which prevented it being so oppressive as it otherwise would have been.

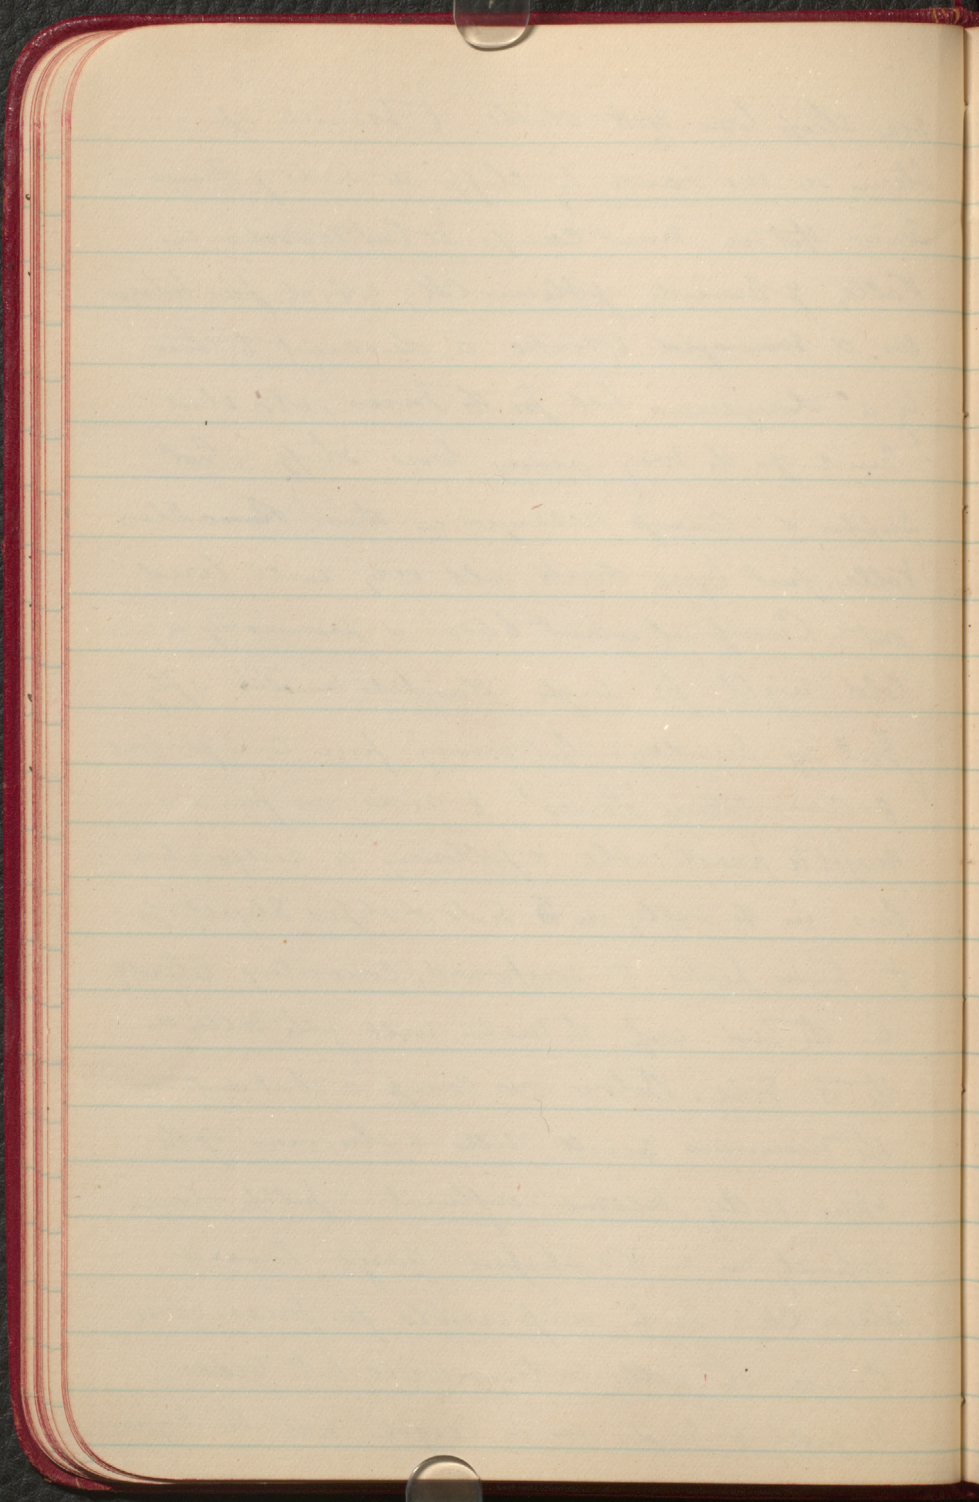

July 19. Having after many inquiries found
that there is a way by which it may be possible
to take horses some distance into the mountains
North of Stein Ck., & thus establish base for climbing
Sawie point, leave this morn with Mr. Eddy, Kirkpatrick
Proffers & Tom with one horse being light
pack, & own riding horse. Tom had got an
outline of the supposed feasible route from an
old Indian & managed to follow his
description pretty well. Very fair going till reached
about 3000', where after being found a little
water, with some difficulty, stopped for lunch.
Next had to negotiate a dangerously steep
hillside, was a less grassed & wooded,
but like the roof of a house & a steep roof
too. Must have made about 3000' on this
when reached crest of long ridge, which
undoubtedly good going, & at elevations of
crest of from 6000 to over 7000 feet ran
on toward central part of Stein Mountains.
Very little brush or timber, rocks & herbaceous
plants. Found an very bad place, where had
to partly clear a trail from loose rocks, along
the very crest of ridge, which ran down by

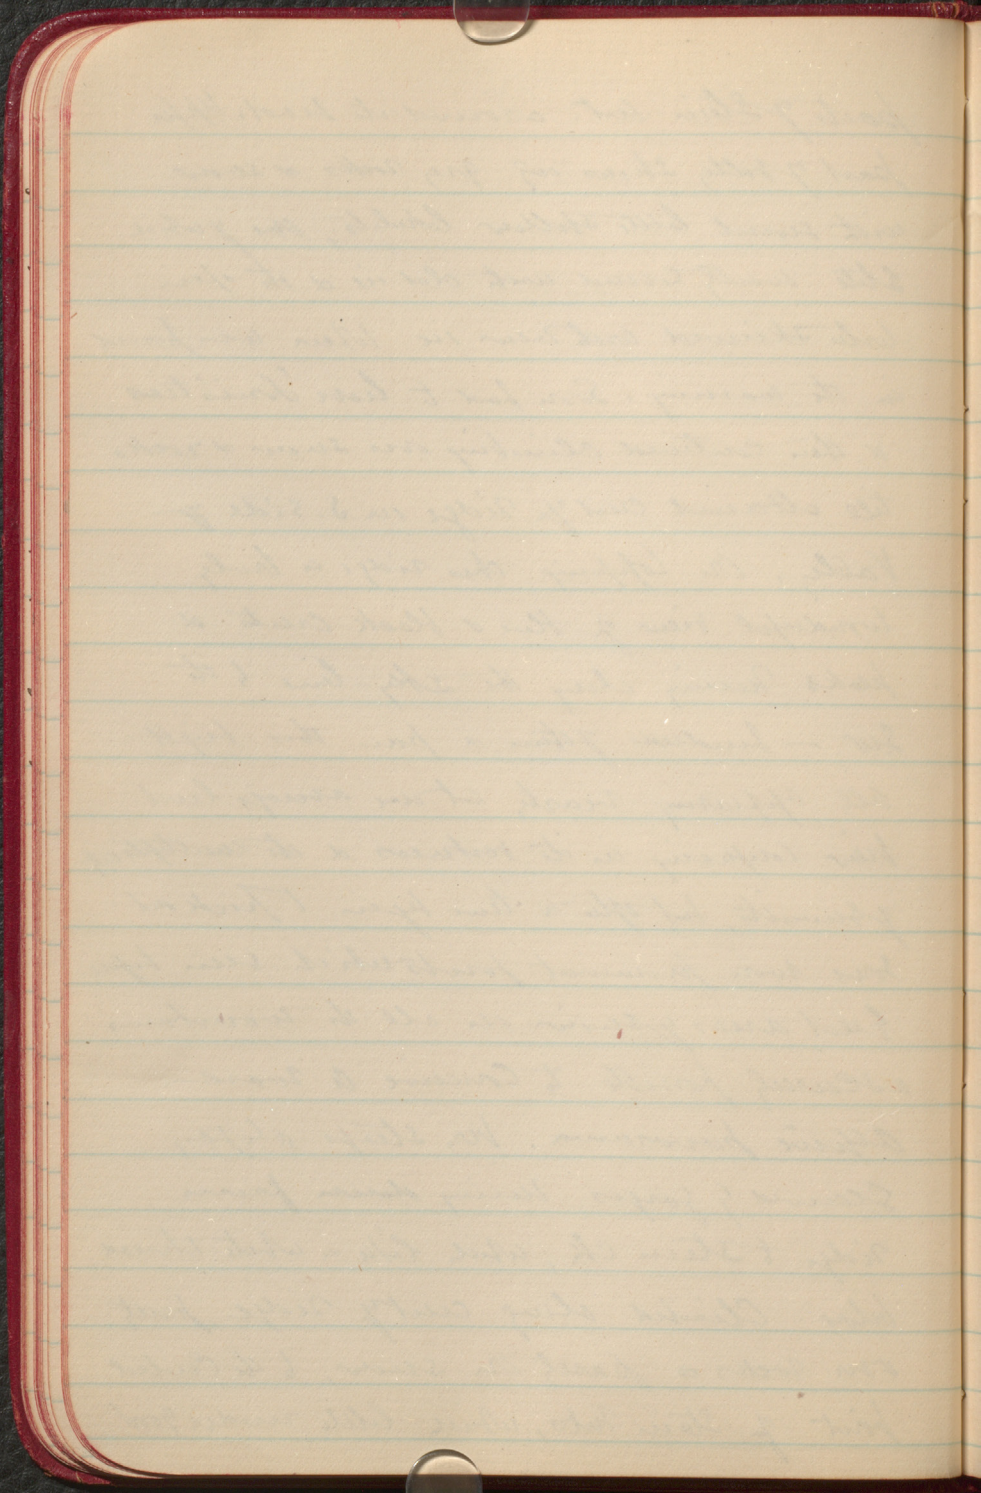

Very steep loose rock-slide to branch of
Stein on one hand, by cliffs on side of Tross.
Saw that we must camp at Cat Woods in
Valley of branch of Stein Ch, which far below
us & managed to make a descent to there
by a dangerous hill for the horses, who slid
much of the way away loose stuff. Got
supper & camp arranged in this Rosalles
Valley just before dark, all very well tired
out. Camp at about 6400' & promising a
cold night for single blankets under aphy.

July 20. Sunday. Got away from camp about
8 am. taking 'Louis' to ride as far as
might be practicable, & following a ridge which
lies in the valley on S. side & slopes slightly up
& higher peaks to westward, connecting laterally
in the end with the main wall of the valley on
the S. side. Below our camp a short distance
the numerous small rills & streams of the
upper valley become confluent & pitch down
rapidly in a V-shaped gorge toward
Stein Ch. Quite impassable for horses. Above
camp, the valley continues wide, but sides
rapidly & ends in a cirque, with the higher

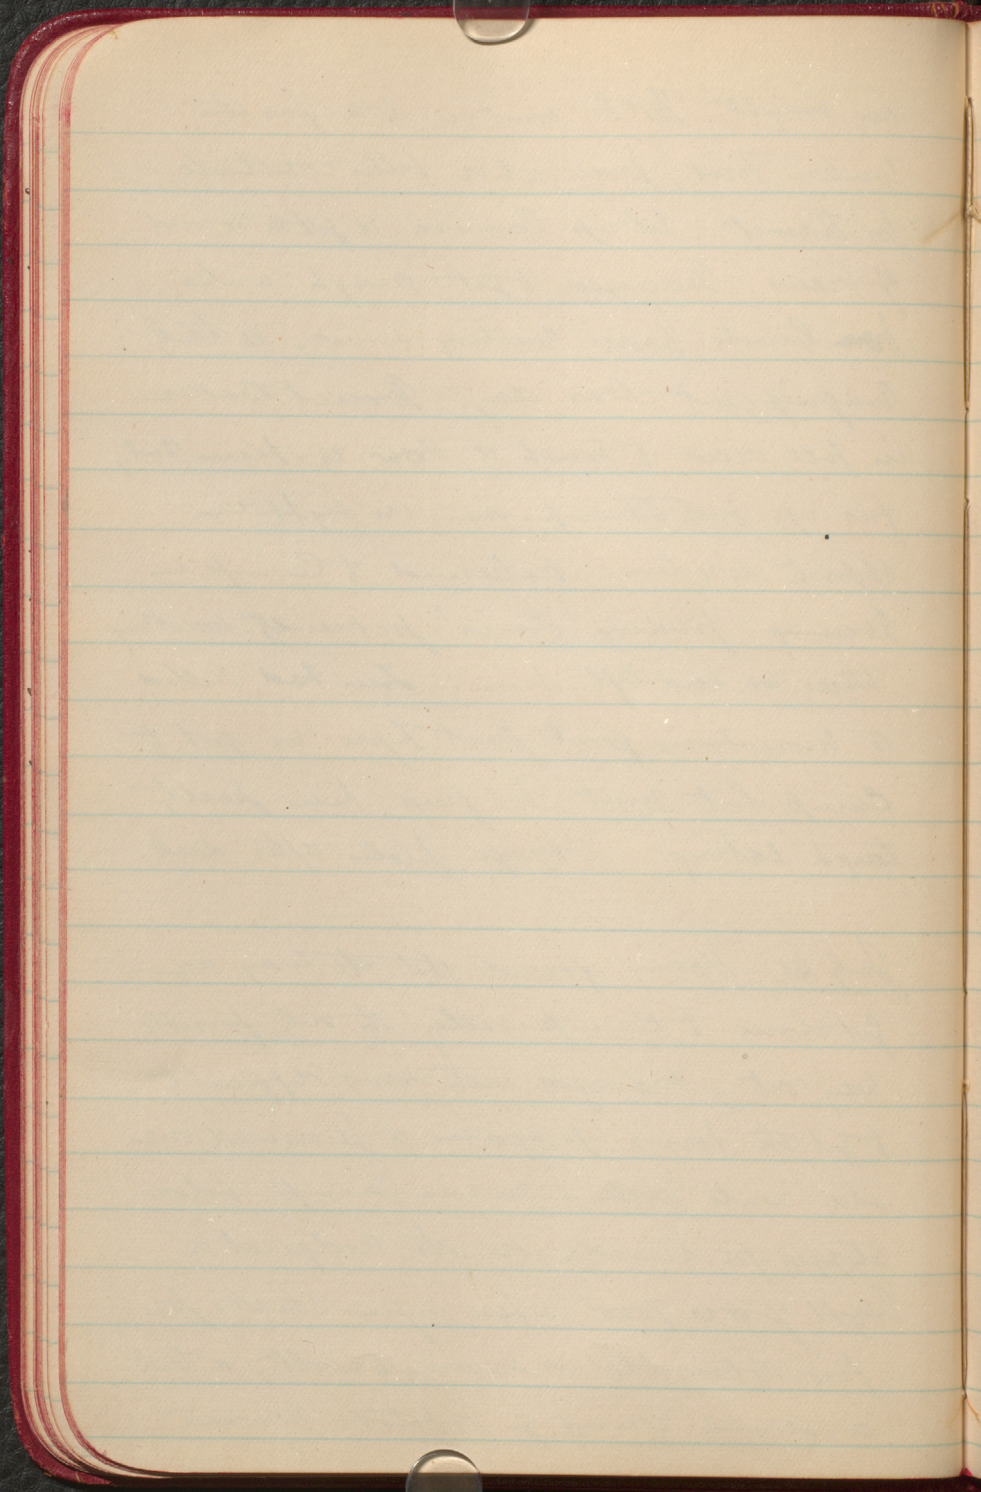

part of Stein Mt. around its head. Upper
part of valley shows a grey rocks & snow
with several little hollow ledges, one yellow
stone water covered with old ice & the open
water skinned with new ice when we passed
in the morning. Soon had to leave Louis' trail
& then continued climbing over snow & rocks
till obtained crest of ridge on S. side of
Valley. On topping this ridge a truly
wonderful view of blue & black crests &
peaks rising along the sky-line to the
S.W. — hundreds of them a pair this height
all appearing nearly at one average level.
View confusing in its vastness & the multiplicity
of summits, but after a time began to pick out
some more prominent points which seem before.
Great areas of snow on all the mountains
& scarcely possible to conceive a more
alpine panorama. Very steep slopes,
scarred by gorges, rising down from
ridge to Stein ck, which like a white thread
below. Climbed along crest of ridge, partly
on rocks & partly on snow, to the Central
point of Stein Mts, which little under 9000'

in height. M^{rs}, went on to a further
western point, from which better outlook
for transit. Set up Camera & got a round
of views. Managed to get enough water
for lunch from melting snow. A truly
magnificent clear day. Mount Baker
in full view to South & Tow-ss-Kum Mt.,
far up both Thompsons in sight in
opposite direction. Returned to Camp in
evening, finding 'Louis' patiently waiting
where we had left him. Tom had killed
a mountain goat just before we got to
Camp last night, but find him pretty
tough eating. Change plates after dark.

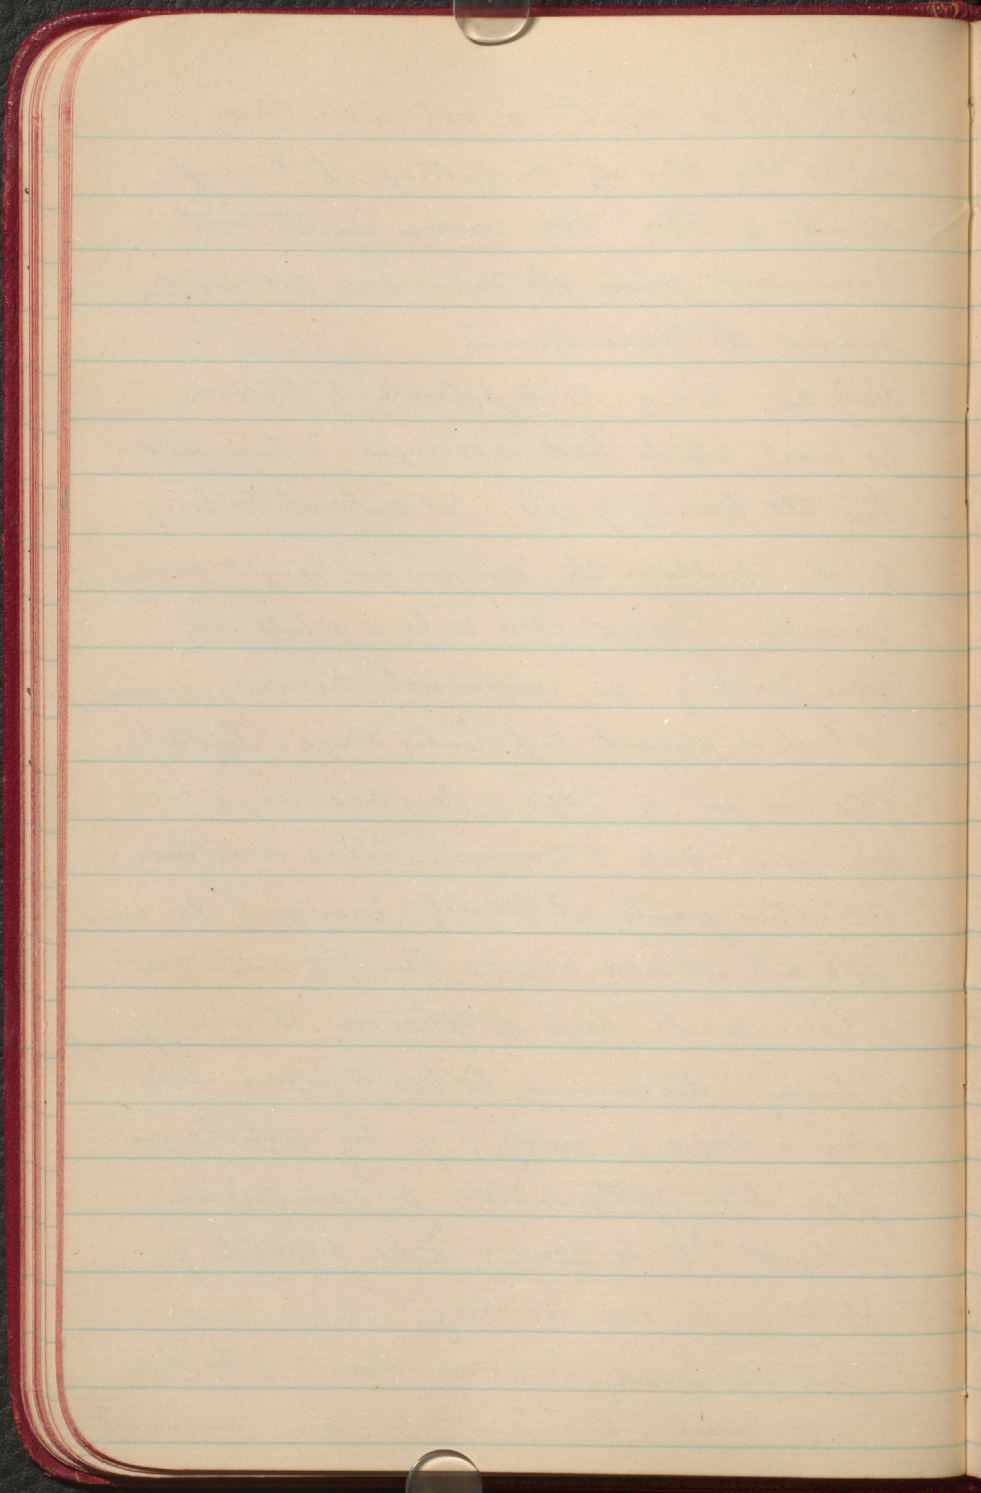

July 21. Having found that the way we
got down to Camp valley the only possible
way out, managed with some difficulty
to get the horses up again & pursued our
old route back to main Camp below.
Stopped for lunch on the ridge at a
height of over 7000' where a few sticks for
fire obtainable & snow melted, & took
a second round of photos. Descent

Very hot & dusty & all well tired
out & very thirsty on getting to Camp
about 4 P.M. Very warm in the valley
soon now when the sun has got well
behind the mountains.

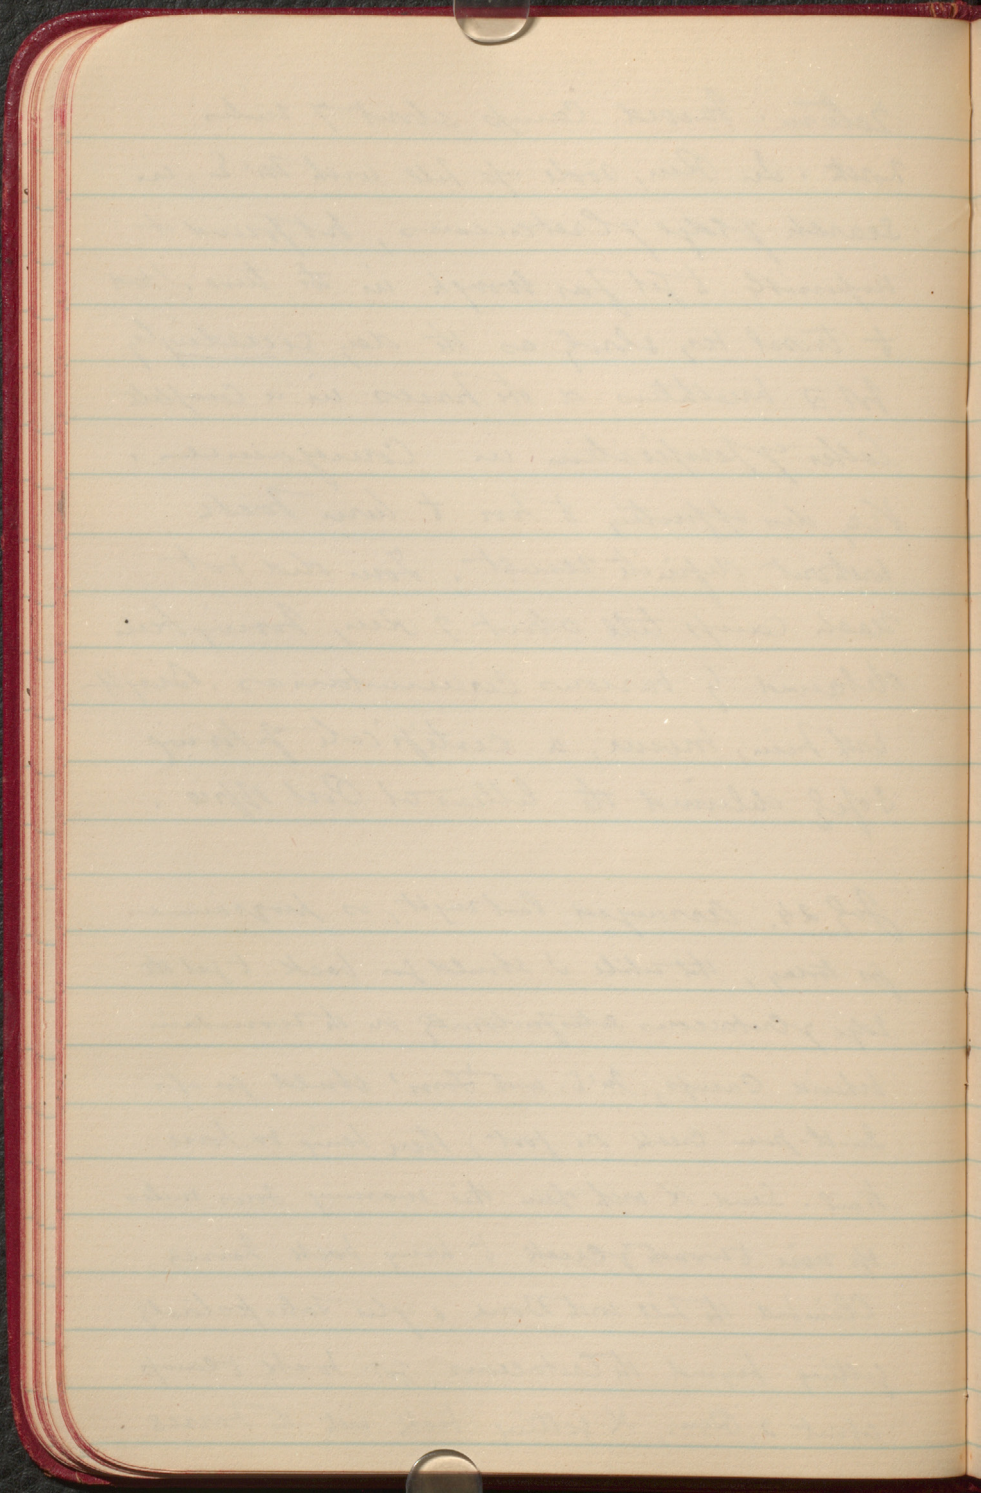

July 22. Send Kirkpatrick to Fyffon
for mail, which had arranged to be sent
there till evening of 21st. Set out with Mr. Gray
to ride up Stein Cr. as far as might prove
possible. Stopped at a mile & a half only
from Camp by an impassable tributary, *despinede*
at least at present high water stage. Left Mr. E.
to go as far as edge of Cretaceous, & take
both horses back to Camp. Spend some time
collecting fossils at locality previously dis-
covered. Mr. E. & K. got back about 7 P.M., the latter with
a large mail. Keep the afternoon as a sort of
Sunday, discussing letters & papers. Find
also a piece of proof (of my article on
glaciation of Cordillera for 'American
Geologist') to be read. Take a couple of
photos. A very hot day.

July 23. Send Indian Tom to Fyffon
with mail, the prof requiring immediate

Return. Moved Camp about 7 miles
North. In P.M., rode up hill with M.E. in
search of edge of Cretaceous, but found it
impossible to get far enough in the time. Had
to travel very slowly as the day exceedingly
hot & breathless & the horses in a complete
lather of perspiration in consequence.
Very disappointing to have to turn back
without definite result. Tom did not
reach camp till about 7 P.M., having been
delayed by various circumstances. Bought
with him, however, a certificate of having
safely delivered the letters at Post Office.

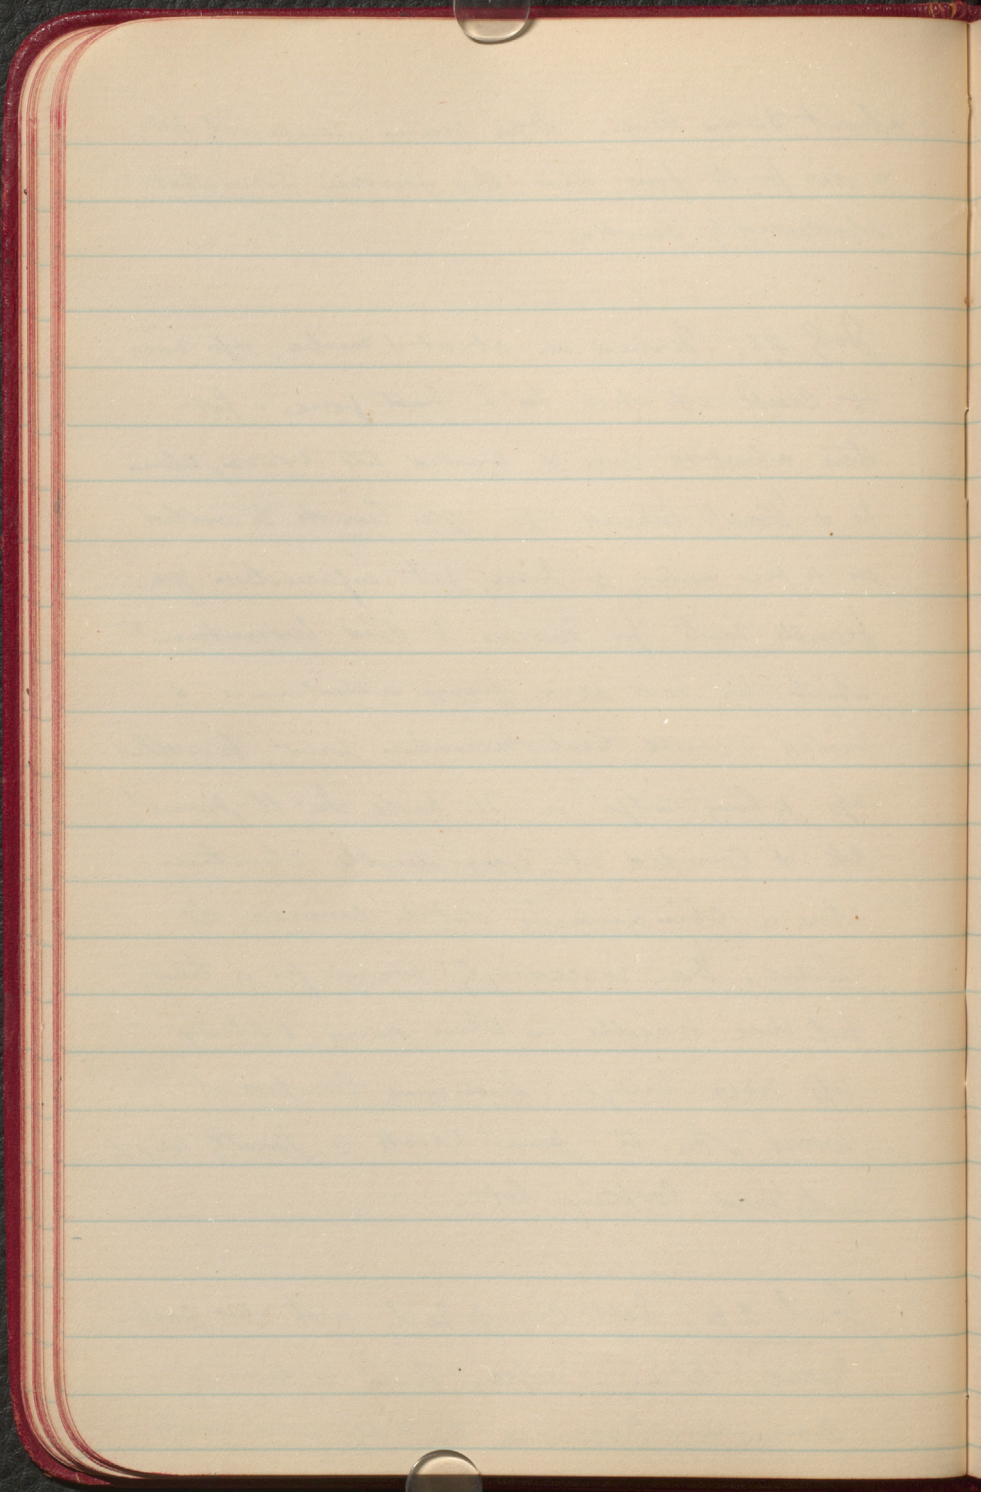

July 24. Arranged last night, as programme
for today, that while I should go back to get the
edge of Cretaceous satisfactorily on the mountain
behind camp, M.E. with Tom's should go up
In-the-pain' Creek on foot, then being on horse
trail. Send X with them this morning some miles
up river to mouth of creek to bring back horses.
Climbed the hill with Dora & after satisfactorily
getting beyond the Cretaceous, got back to camp
about 2 P.M., X getting back with the horses.

about same time. Day again extremely hot,
& air for the first time this season somewhat
obscured by smoke.

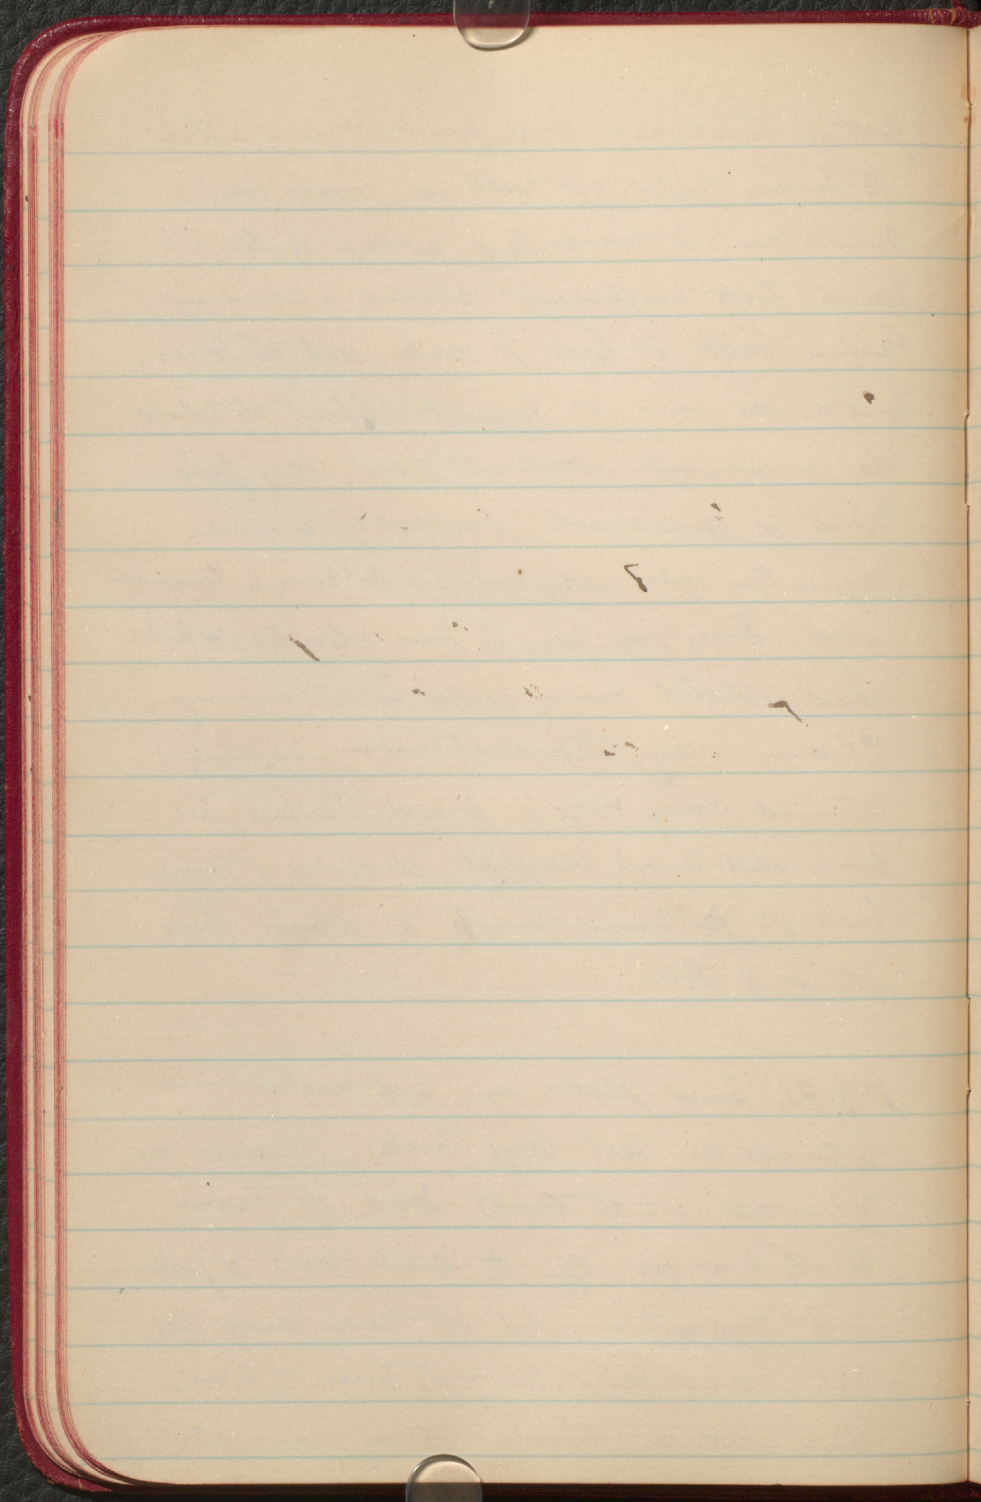

July 25. Moved on about 5 miles up river
to Creek up which M^cE. had gone. Got
there about 10 am & waited till noon, when
he & 'Forn' turned up. After lunch travelled
on a few miles, & Forn got information of a
feasible route for horses to 'Red Mountain'
which we had seen from a distance &
visited to make next observation point, travelled
up a long ridge on N. side 'In-tt-pam'
Ck & camped at considerable elevation
where a Chinaman's ditch crosses the
ridge. Day exceedingly warm for a time,
but more bearable in P.m. owing to steep
up river breeze. Indians camped at
mouth of 'In-tt-pam' Creek a pretty rough &
untutored looking lot.

July 26. Left camp early with one pack-
horse, M^cE., Propper, Forn & riding
animals. Ascended the ridge from camp,

getting eventually to a point beyond which
the horses could not well go, would have
made an out-camp here, but no water to be
found. Took instruments needed & sending
Purpere back to look for water, with the horses,
went on on foot to Summit. Spent the whole
day on summit at about 7600'. Very fine
views & considerable amount of useful
information gleaned, includes McRony's transit
work. Day very fine, the few clouds which
had collected away peaks in morning,
clearing away. Pleasantly warm. Evening
returned down ridge & found Purpere, but
being still through daylight, decided to push
back for ~~the~~ main camp & arrive there
about 8 P.M.

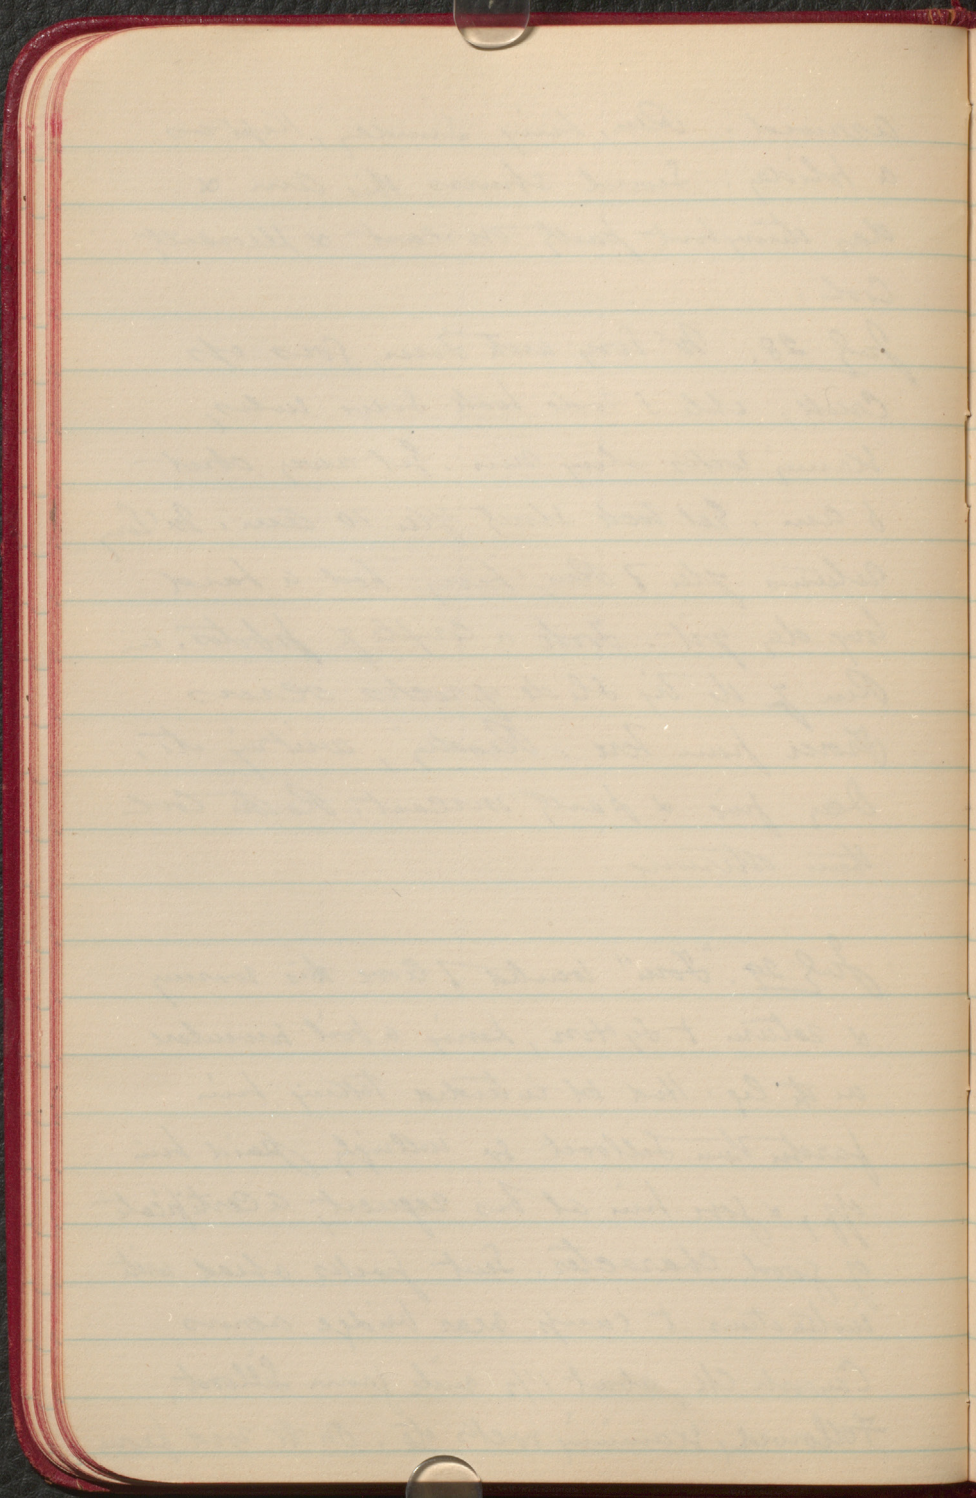

July 27. Sent packs on with instructions
to camp on best large creek, known as
Chi-wosh' (= the creek) Did not know
exactly how far off the creek was & following
with observations did not reach camp till
1:25, having been en route since 7 am.
Teats set a dinner ready when we

arrived. Rain, being Sunday, kept us
a holiday. Several showers this am &
day, strong but partly overcast & pleasantly
cool.

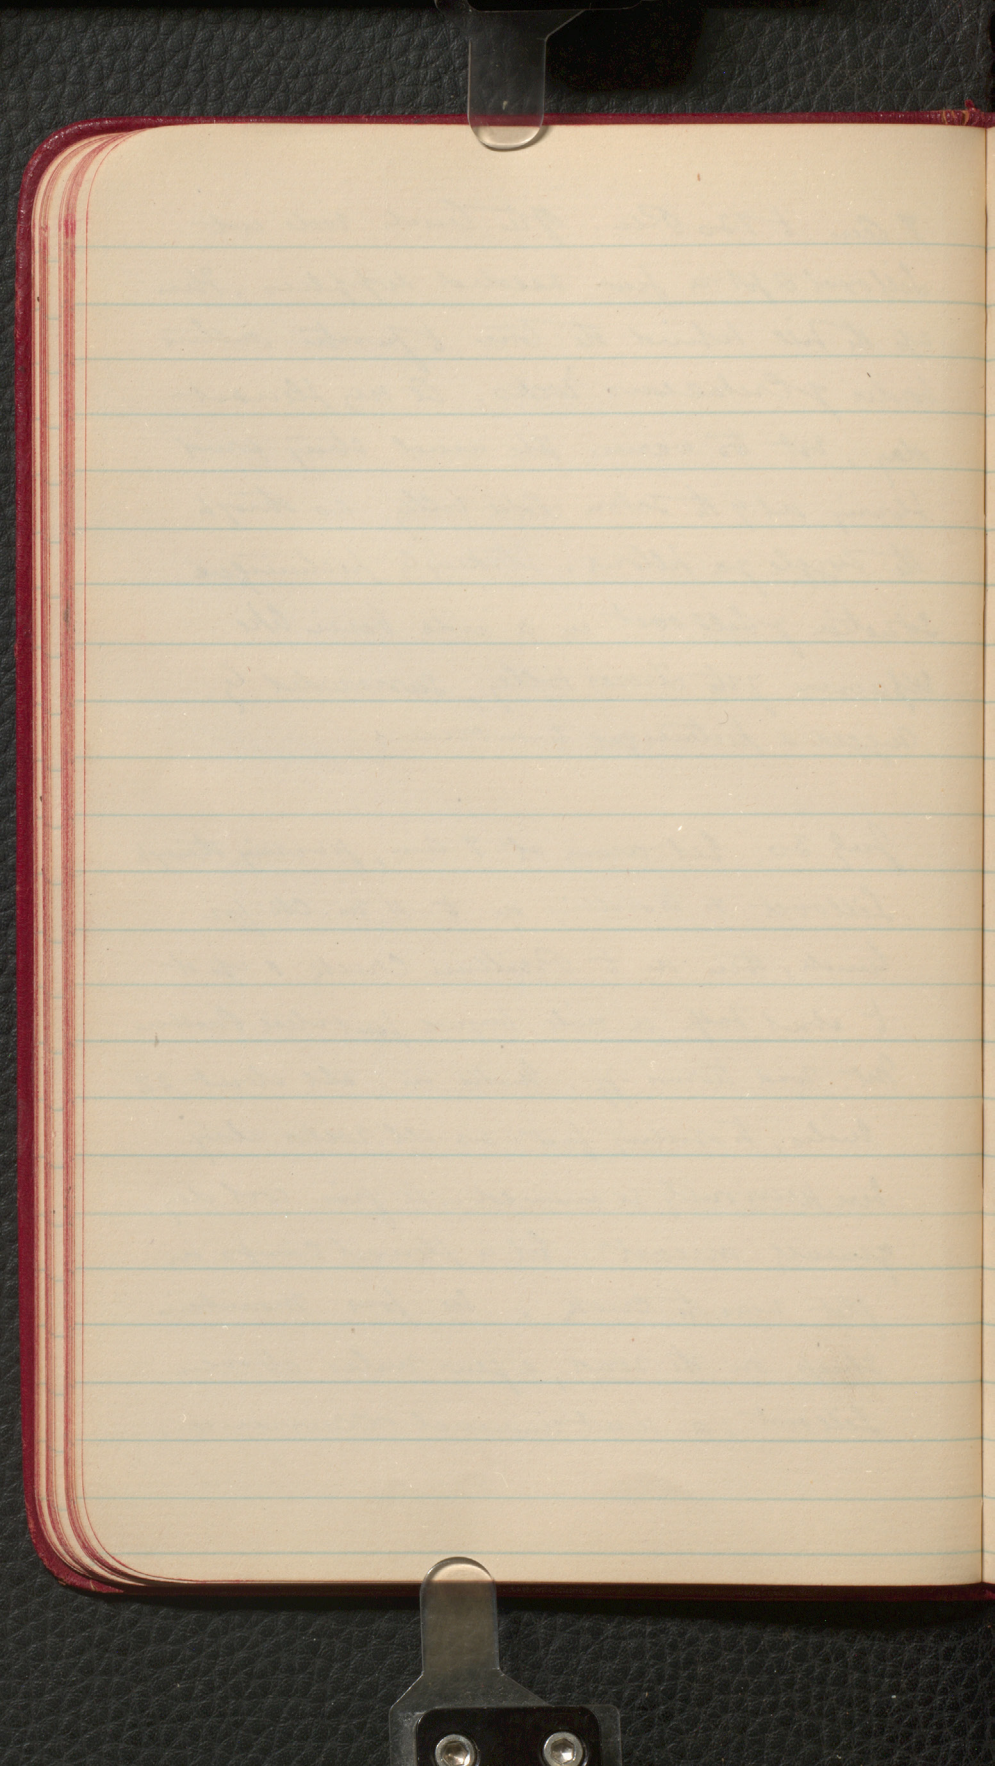

July 28. Mc'Long with Tom, goes up
Creek, while I rode back some miles,
examining rocks along river. Got away about
6 am. Got back about 10 am. Mc'Long
returns after 7 pm, being had a hard
day yet. Took a couple of photos in
Rim of the big slide of rocks across
Tracer from here. Reading, writing etc.
Day fine & partly overcast. Rather cool
than otherwise.

July 29. "Tom" wanted to leave this morning
& return to Lytton, having a boil procedure
on the leg. Had not intended taking him
farther than Sillvoot so willingly paid him
off, & gave him at his request, a Certificate
of good character. Sent packs ahead with
instructions to camp near bridge across
Cayosh Ck, about 1 1/2 mile from Sillvoot.
Followed, examining rocks etc. On the road from

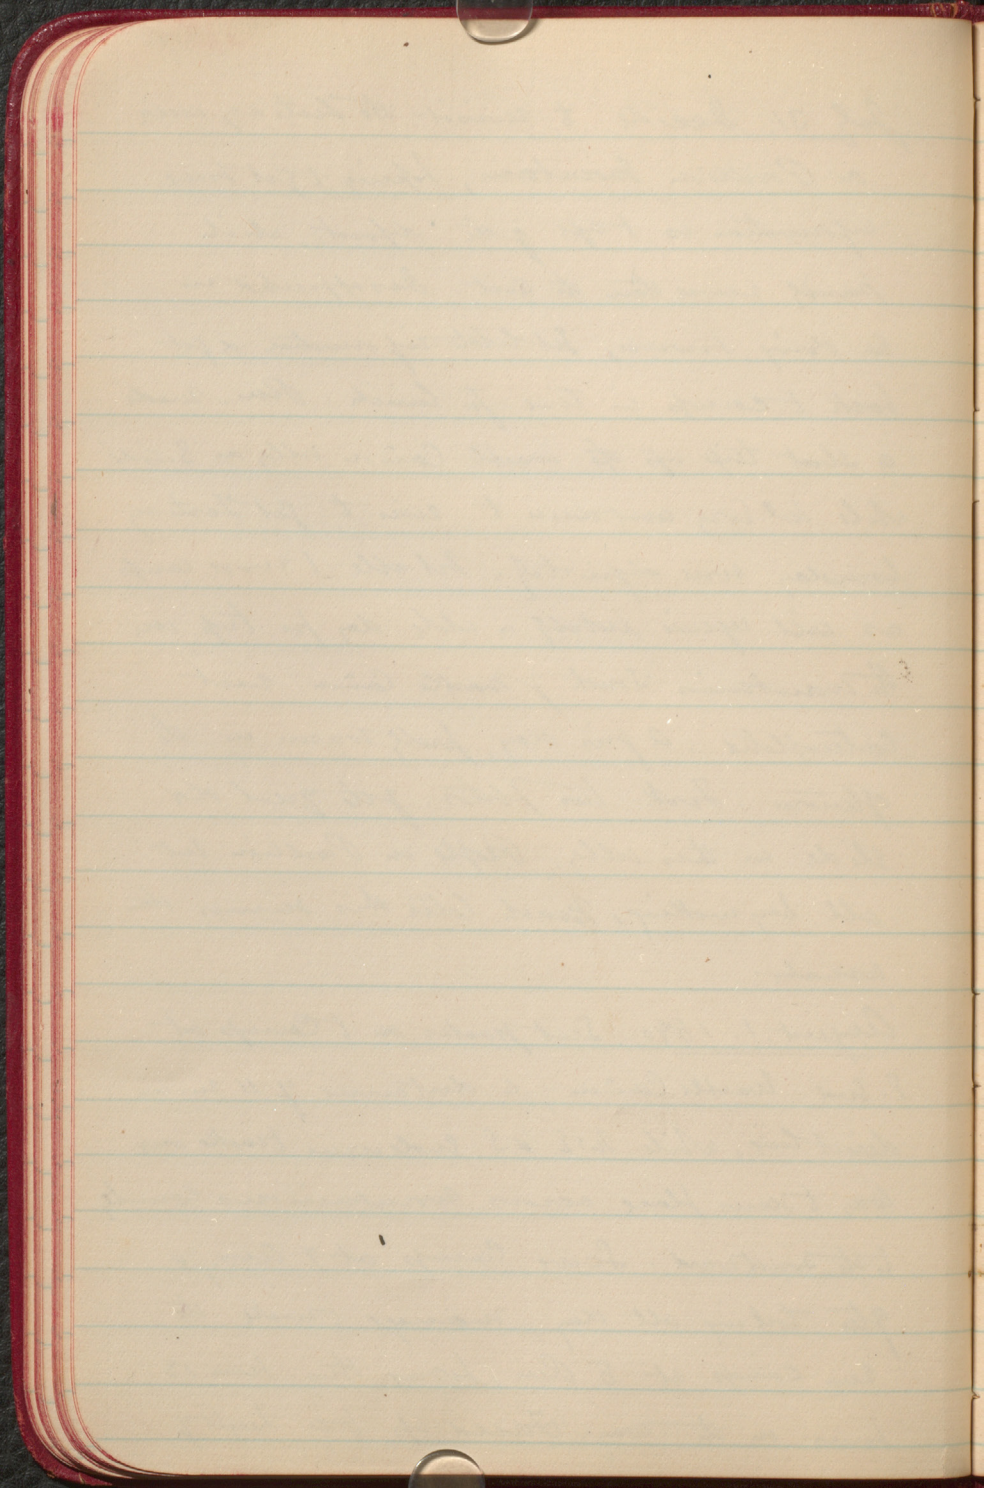

7 Am to 1.20 Pm. After lunch rode into
Lillooet & got a few needed supplies. Then
up the hill behind the town to further outline
border of Cretaceous rocks. A very pleasant
day, not too warm. The usual strong wind
blowing out of the Seton Lake valley as through
the Cragge ya hills. Strikingly picturesque
situation of Lillooet in a wide basin like
upstream of the Fraser valley, surrounded by
rugged & picturesque mountains.

July 30. Got away at 7 Am, passing through
Lillooet & travelling on to 11 m. Ch for
lunch, then on to Powell's Creek & up it
to about half a mile beyond point where Pacific
Int. road turns off. Made in all about 22
miles, travelling fast as all rocks along
here previously examined. A fine cool day,
generally overcast. Got a pleasant camp on
flat near the Creek. See four mountain
sheep on the road, a few miles above
Lillooet, a most unusual occurrence.

July 31. Decide to revisit the Tertiary area
on Powell Mountain, hoping to get some
information as to age of the deposit, which
possibly newer than the rest. Disappointed in
the morning, however, get little information & get
back to camp in time for lunch. P.M. made
a short trip up the Washle Cañon valley on S. side
while Mr. Eory went down to river to get Tertiary
boundary more definitely. Got little to write camp
as will require probably a whole day for trip over
the mountains South of Washle Cañon next
contemplated. A fine day, pretty warm in the
afternoon. Took two photos. got the great old
slide in this valley. People on Powell Mt.
all hay making, much later this summer than
usual.

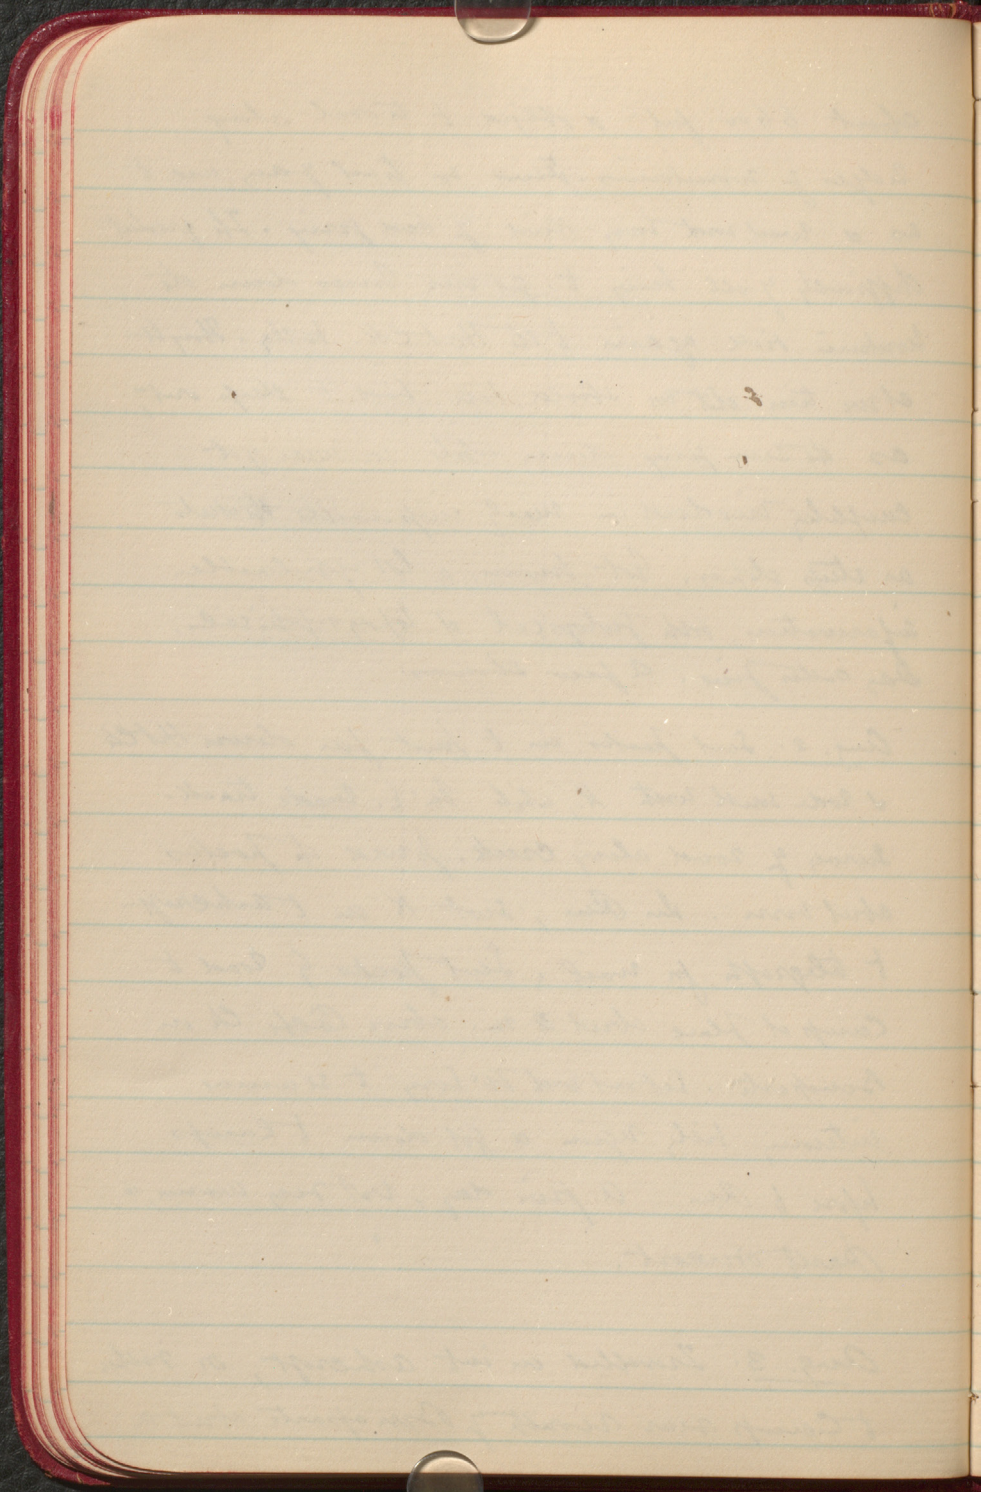

August 1. 1890. Sent pack on to Camp at
S. end Washle Cañon, a distance of 11 m. in
direct line, while Mr. E & S rode across tracks our
way to same place across mountainous country
to the southward. Leave Camp at 7 A.M. &
after toiling all day, manage to make the
new camp at 8 P.M., having thus been 13
hours on the way. Forced up to a height

about 6600 feet & obliged to travel along
ridges of mountains. Found on trail many more
as we went with every kind of bad going. The greatest
difficulty of all being to get our horses down the
mountain side again to the Hat Ch. valley. Thought
at one time that we should have had to sleep out,
as the sun going down while we were yet
completely involved in nearly impassible thickets
on steep slopes. Got, however, a lot of valuable
information, both geological & topographical.
Day rather fine. A few showers.

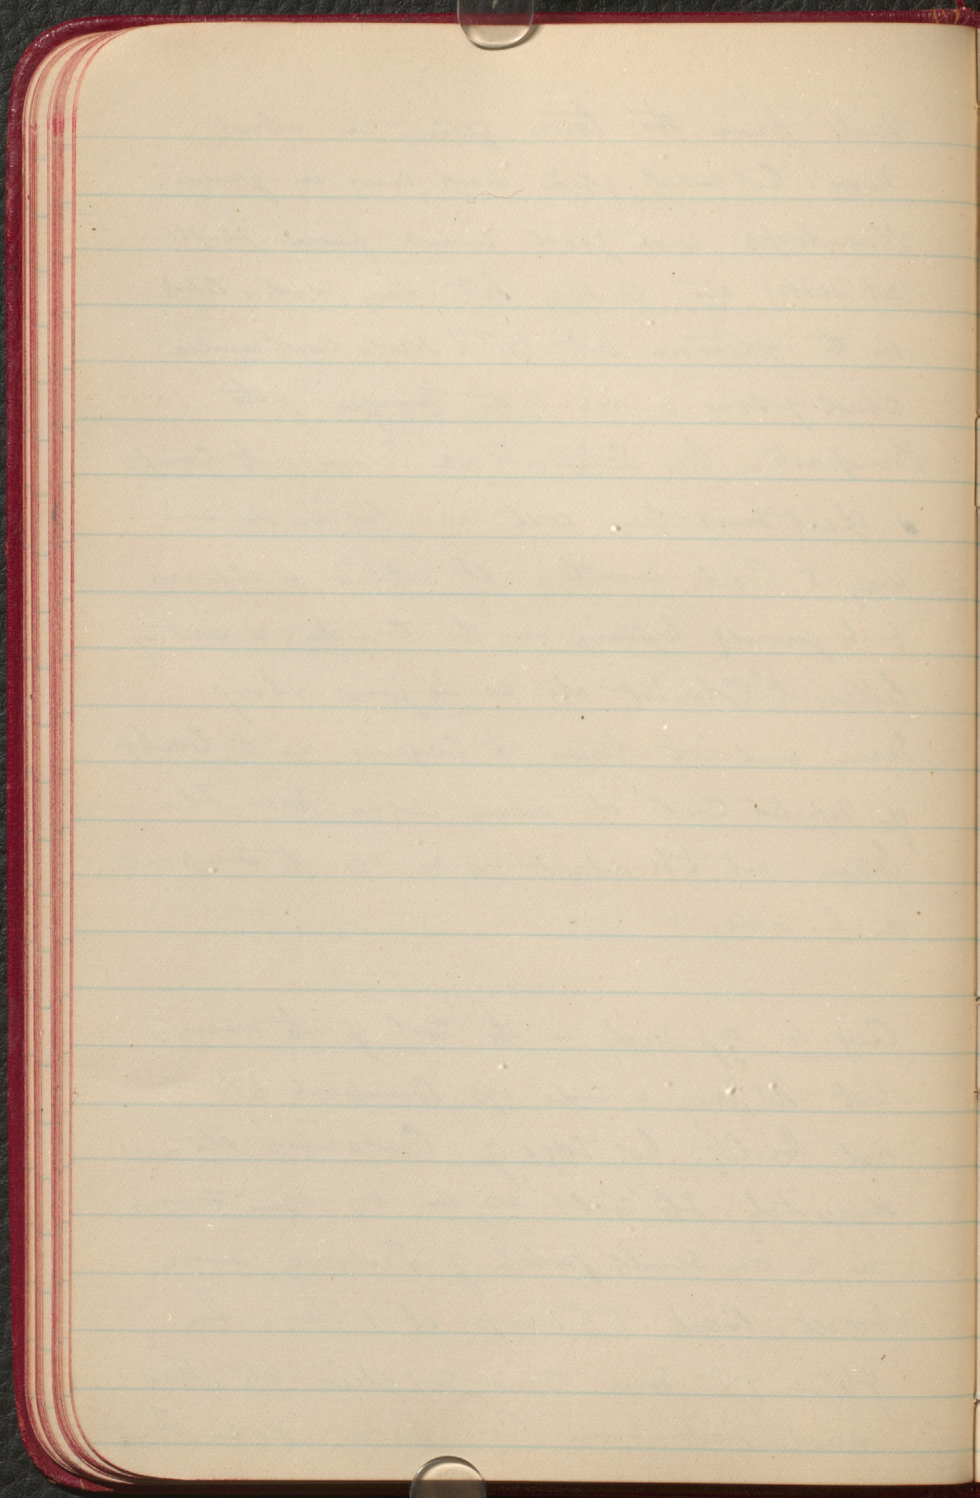

Aug. 2. Sent packs on to post for down Hat Ch
& rode south with K., while W. & E. made track-
survey of road along creek. Joined the packs
about noon. In P.m., sent K. on to Ashcroft
to telegraph for mail. Sent packs by road to
Camp of Place about 2 m. above Cañon Ch on
Benaparte. Set out with W. & E. to examine
interesting hill region & got down to camp
before 6 P.m. A fine day, but very warm, &
partly overcast.

Aug. 3. Traveled on into Ashcroft, or rather
to Camp near mouth of Benaparte about a

Mile from the town, getting in about
noon. Got mail, which had come in from
Kawloops, with good news from people
at Wit's etc. A very hot day, & did not
in the afternoon but try to keep cool under
shade of some bushes by the margin of the
Bonaparte. Mr Seton-Kar came into camp
& spent some time with us. He is on his
way to Capt. Mantley's et ultra, & appears
to be generally looking over the country & writing
letters to 'Colonist' etc as he goes along.
Evening went into town to inquire as to locality
of reported coal discovery near here. This
turns out to be about 4 m. up the Bonaparte
on E. side.

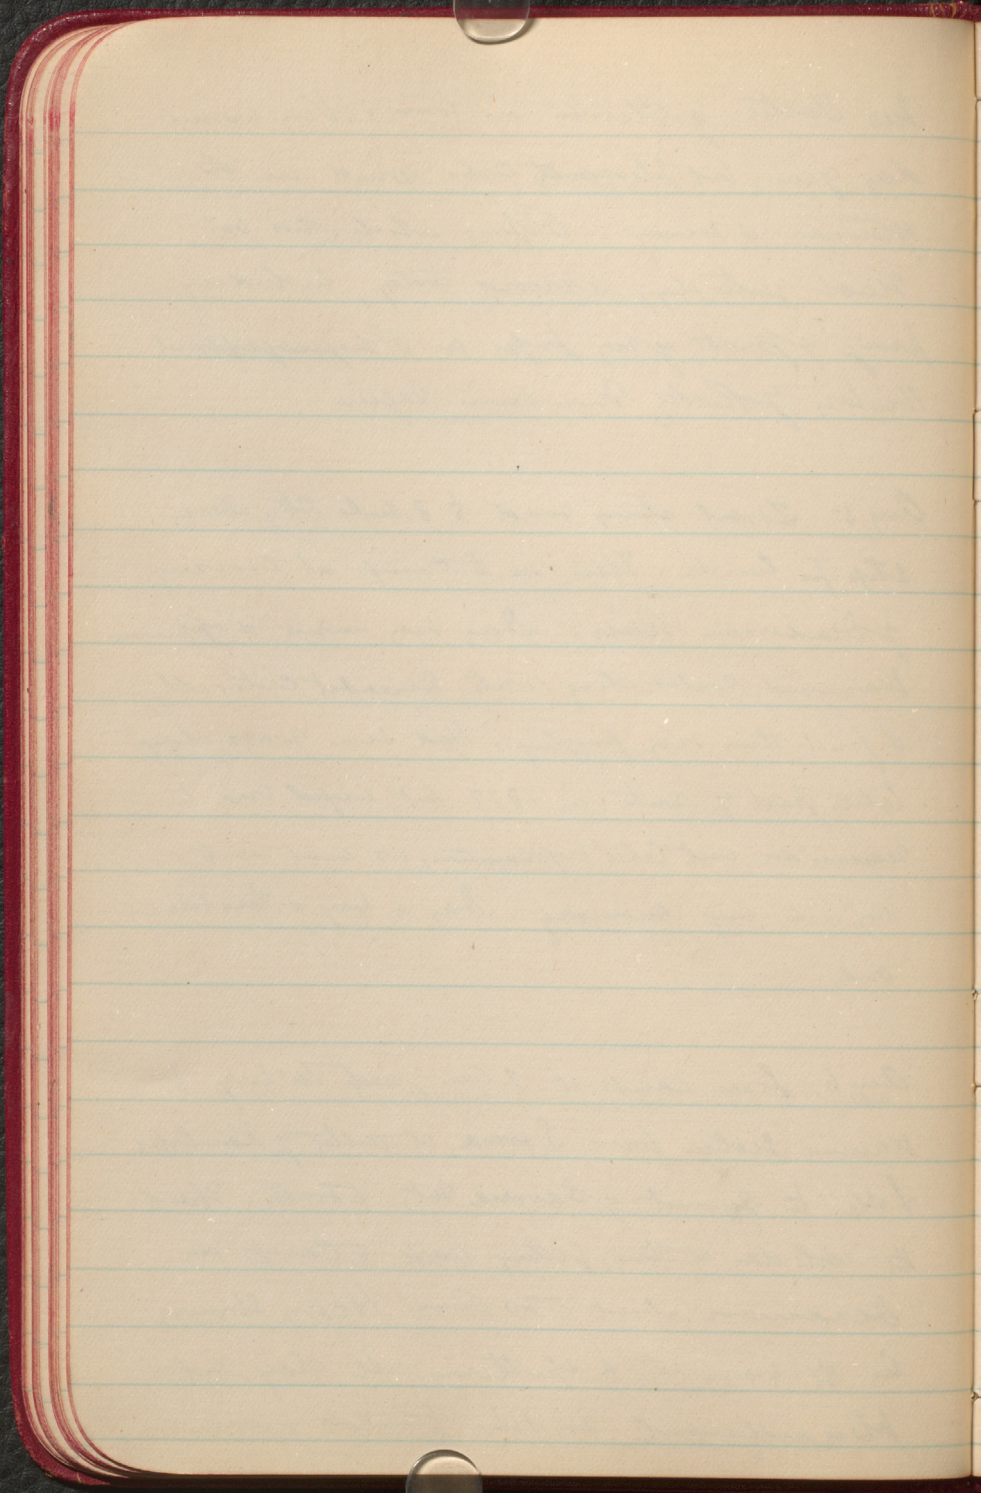

Aug. 4. Off early in the eve of the morning
with Mr Eddy & rode up Bonaparte to the
coal locality. Got trace of Crinoids etc
definitely. The 'coal' is in by open seams
in a very small patch of Tertiar., under
basalt. Back to camp at 1 P.M. In
afternoon got some new supplies etc. Had
another visit from Mr Seton-Kar. Found

has Foster of Clinton in town. Very warm
day again, but pleasantly cool wind in the
afternoon & evening. Papers which did not
reach yesterday, arrived today, including
proof of part of my paper on Physiographical
History of Rocky Mountain Region.

Aug. 5. Traveled along road to 8 mile ck., where
stop for lunch. Then on to camp at crossing
of Deadman River. Day very warm & oppressive.
Examined rocks along route somewhat critically,
& find them very puzzling. Had seen rocks along
latter part of route in 1877 but useful now to
reconsider with later information, as well as to
refresh my memory. Day a long & tiresome
one.

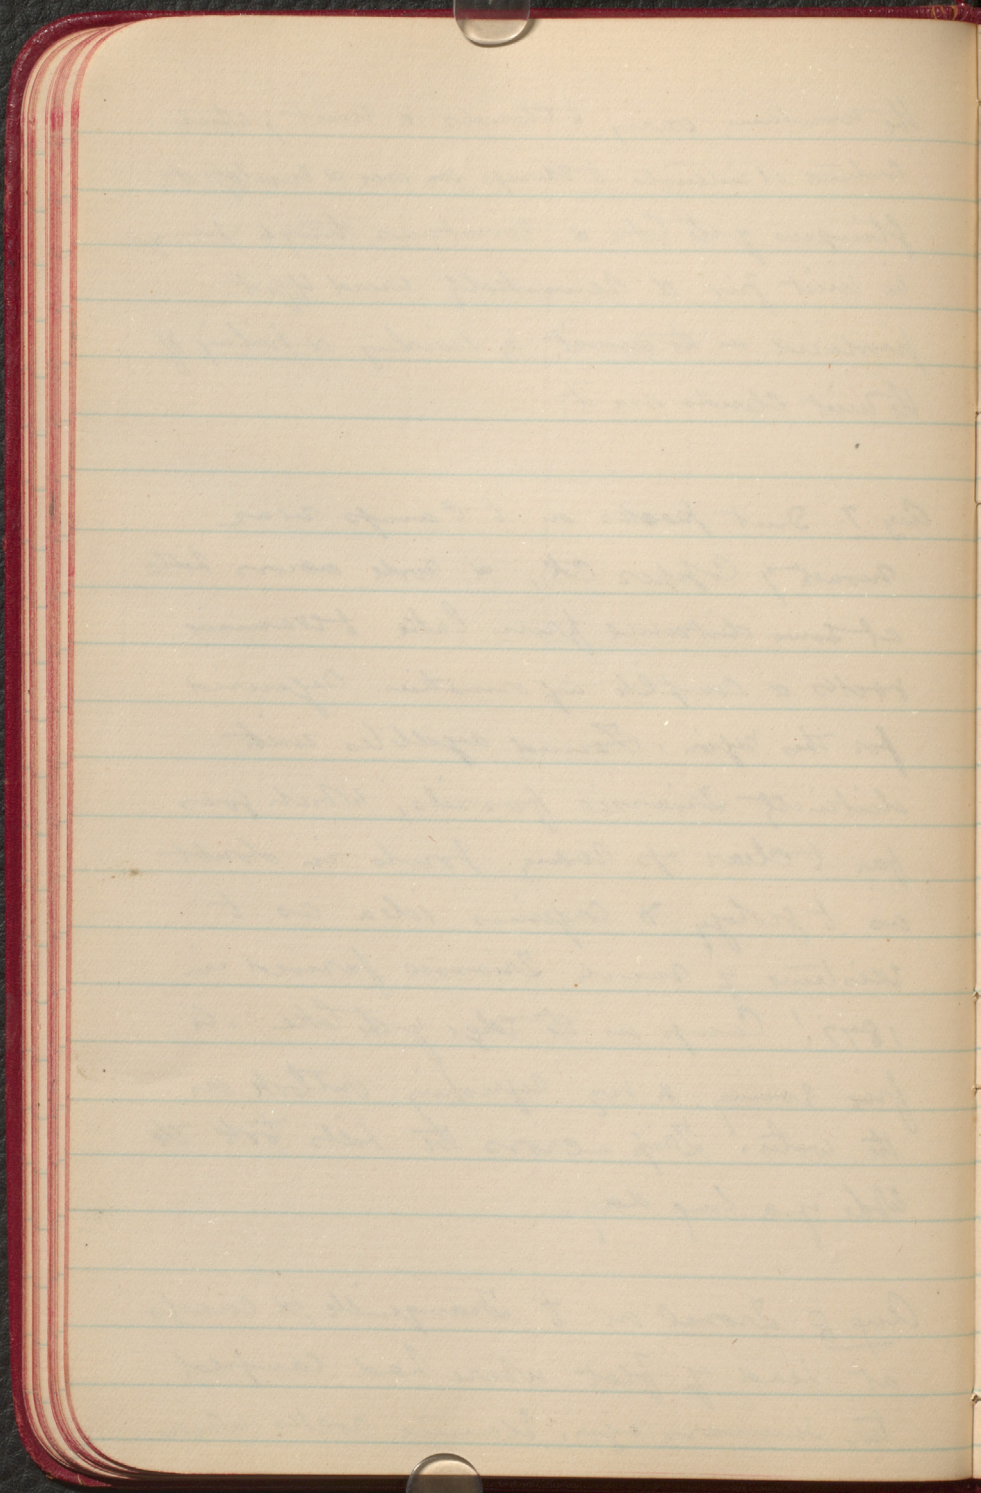

Aug 6. Leave camp at 7 Am, with McEury to
Wainie section from Sarona, at outlet of Kawloops
Lake, to Summit of Savona Mt. to South. Spend
the whole day at this, getting back to camp on
Deadman about 5.30 Pm. Heavy showers
in the morning & spattering all day, but
pleasantly cool. No time to speak of from

The mountain owing to clouds & mist, which
continued at intervals to sweep over us & envelop it,
glimpses of the lake & mountains through openings
in mist fire & remarkably weird effect
produced on the summit by swirling & boiling of
the mist clouds over it.

Aug. 7. Sent packs on to camp near
mouth of Copper Ck., & rode across hills
at some distance from lake to examine
rocks & complete information required
for this region. Found argillites with
distinctly Triassic fossils, which goes
far to clear up many points in doubt
as to geology & confirms idea as to
existence of much Triassic formed in
1847. Camp on the edge of the lake. A
fine evening & very refreshing outlook on
the water. Trip across the hills took the
whole of a long day.

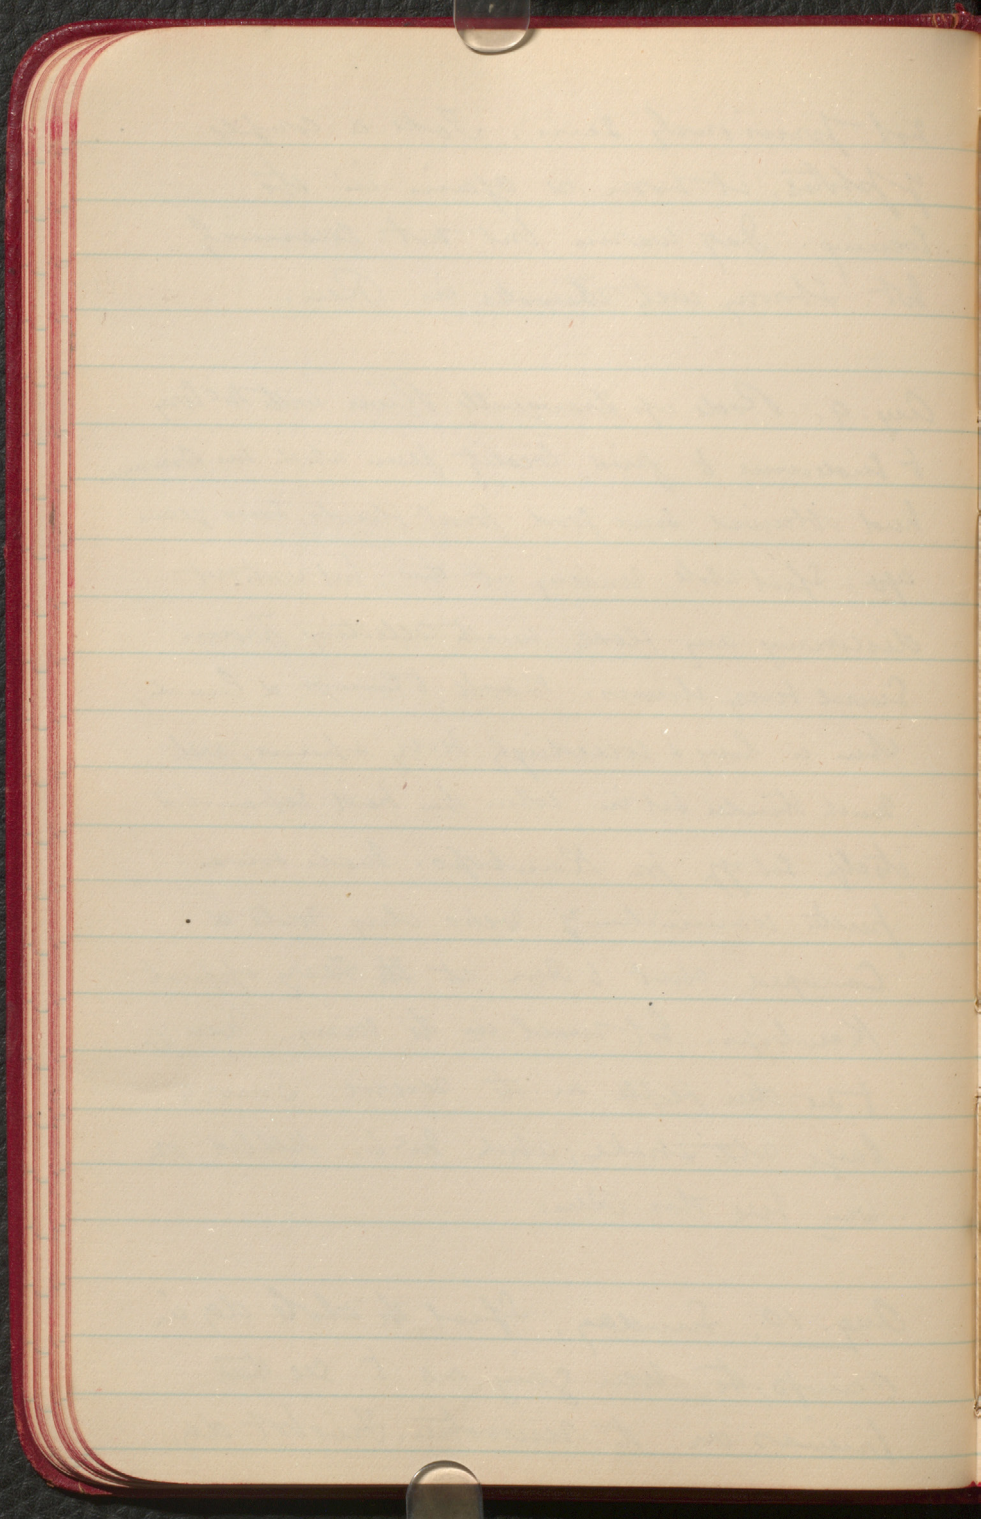

Aug 8. Traveled on to Tranquille, & camped
at head of flat where had camped
two summers ago. Examine rocks where

not provisionally seen. Took a couple
of photos, at noon & again in the
evening. Day warm but not excessively
hot. Showy with thunders in P.M.

Aug. 9. Rode up Tranquille River with McLaughlin
to endeavor to find locality from which his foreman
had obtained some good fossil plants some years
ago. Spent whole morning at this, but without
discovering any place worth collecting from.
Several heavy showers. Back to camp & lunch,
then a heavy & exceedingly heavy shower, with
much thunder set in. When this had exhausted
itself set off for Kawbops. Made some
further examination of rocks along route &
Camped about 6 P.M. at the Ferry opposite
Kawbops. Got mail in the morning. Went off
to see their people on the reserve. Saw a
large rattlesnake, which McL. killed, on
way here this P.M.

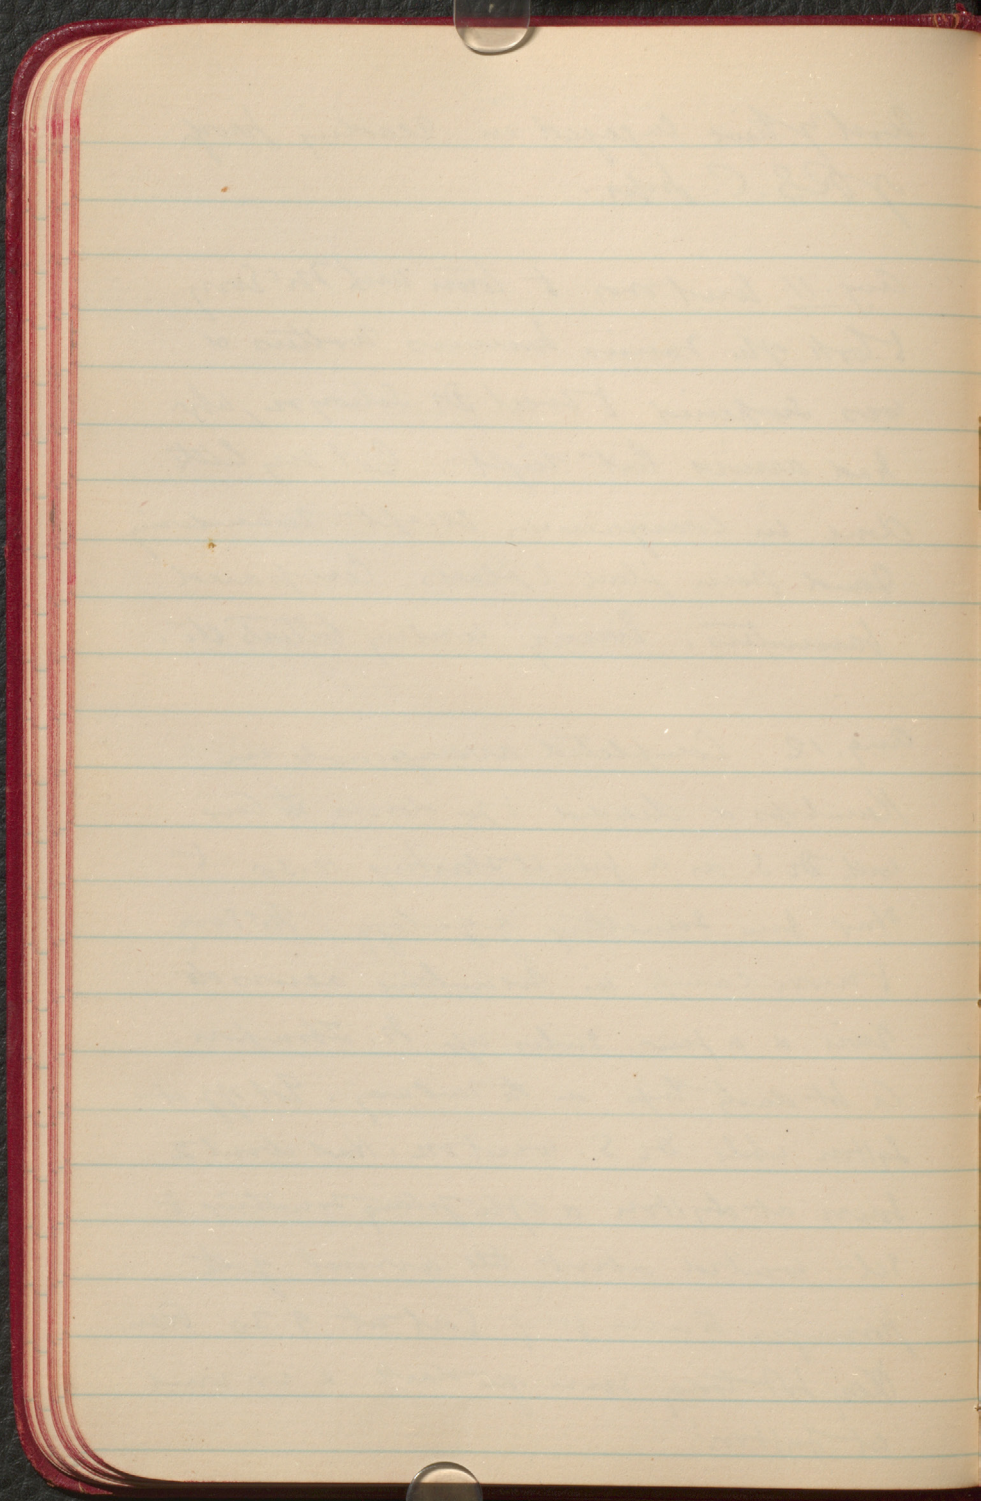

Aug. 10. Sunday. Spent the whole day in
camp, the men going out to see their
friends on the reservation. Fine hot day.

Most of time engaged in reading proof
of R.S.C. paper.

Aug. 11. Went over to town with McEvoy
& took of the various business matters &
was surprised to meet Dr Selwyn, who
had arrived last night. Got my little
done in consequence, except wandering
round from place to place. Compared
barometers. Evening writing letters etc.

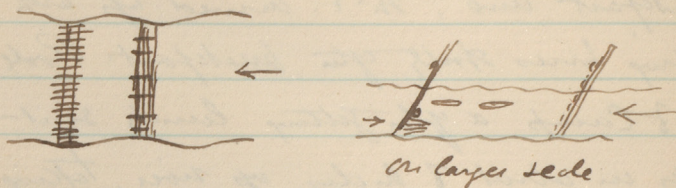

Aug. 12. Completed arrangements in
Kearneys & decided to go down the line
with Dr S. on a freight starting 12.30 to
star in something of geology. McEvoy
to move camp in the line across the
river & a few miles up N. Thompson.
A hot dusty trip on the railway. Got off at
Sylton while Dr S. went on. Had about 2
hours at Sylton & after getting something to
eat - waited about till arrival of the
passenger train going East at 9.30 P.M.
Went East today even after dark & no wind
at Sylton!

Aug 13. Arrived at Rawloops at 4:15-
Am. Got a bed in Hotel & turned in. In the
breakfast time, Mr. E. turned up with
riding horses shortly after breakfast. Rode
out of Camp & after getting lunch sent
packs in about 8 miles up river, taking to
the hillside & examining rocks there for
general section, with Mr. Eoy. A very hot day
with scarcely a breath of wind. Beautiful
evening & a pretty camp overlooking the fruit-
bearing both Thompsons

Aug. 14. Two of horses having strayed, got
a rather late start. Another very hot morning.
Examined rocks along hills for about 5 miles
& seeing more distant hills which appeared
basaltic, decided to camp at lunch spot.
Spent all afternoon out of the tentward. Breezy
& pleasantly cool. Camp situated about a
mile above 'Edwards', beside an irrigation
ditch which has become naturally bordered
with alders etc. Thunder storms in the
distance this afternoon & evening.

At Barriere R see another new Salmon
Catching device, as below

Ind.

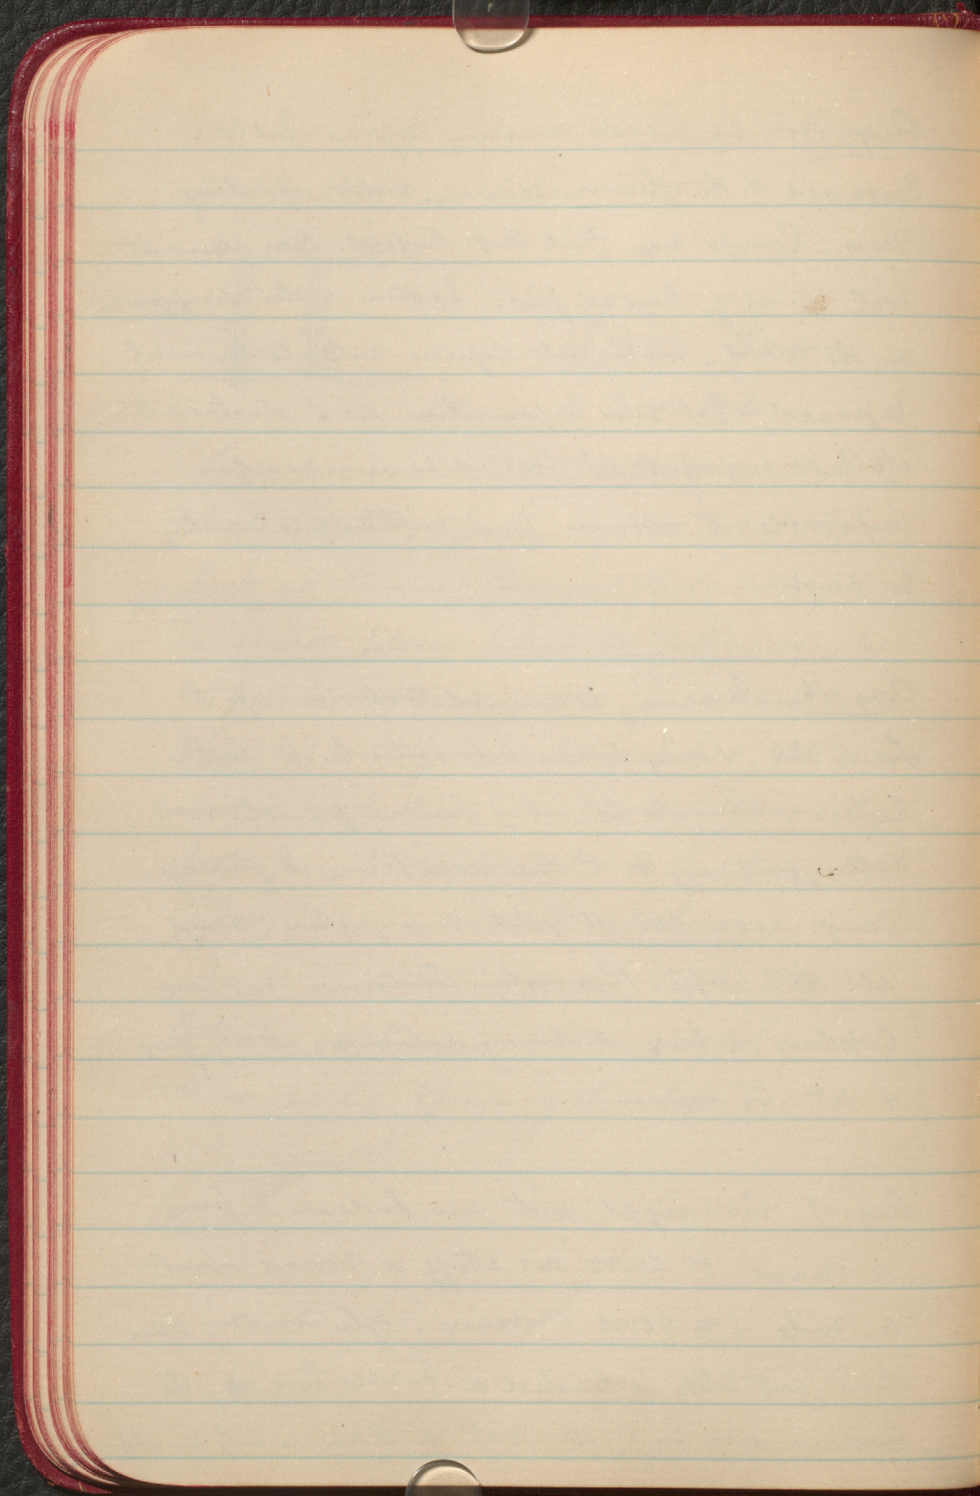

Salmon barrier composed of upright small poles,
dual supported, & forming a fence which slopes
back up stream. Convergent sticks arranged
in several places below as buttresses, but
not possible as exits. Upper fence with same
slope, but with bars horizontal & wadded in
with small sticks etc. See no reason why
both fences should not be similar, but
judging from number of salmon enclosed,
must be a very effective trap. The
Salmon afterwards taken at with usual
three-pointed spear of this slope

Aug. 15-. Spent the morning off in hills to
Eastward & the afternoon examining rocks up along
River. Camp near Fish Trap Rapid. Day pleasantly
cool most of time & fine. Section rather disappointing
on the whole, rocks not regular & not continuously
exposed. Got some information as to distribution
etc but imperfect at best & seems nearly
impossible to obtain exact outlines, country
too rough.

Aug. 16. Morning I examined rocks on up to
Louis Ck, hoping somewhat better luck with
Section. Then rode out to Tent & got into back
Valley, following it to Barrière River & finding
Camp near mouth of that river, where nearly
all the Upper Riverine Indians now are
catching, setting & drying Salmon. Day fine
& not too warm.

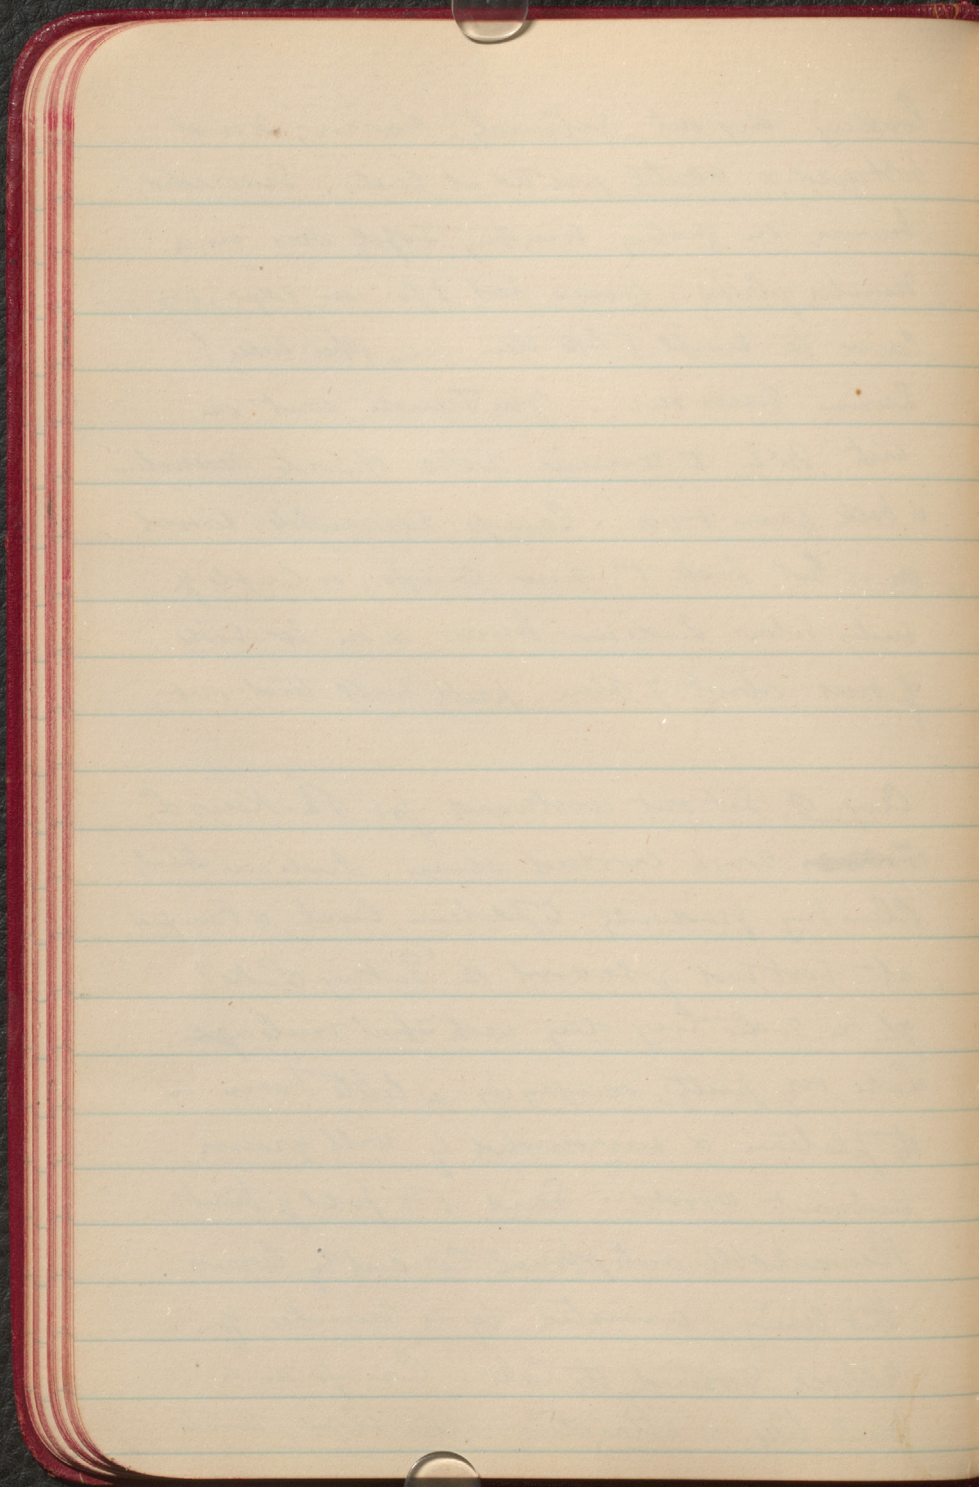

Aug. 17. Arranged with an Indian to bring
a canoe to cross our stuff & would about
a mile to a good crossing. After waiting some
time, with stuff unloaded & horses tied up, the
Indian bore in sight with a dangerously small

Looking dry out, extremely narrow, road
followed & acutely pointed at ends. Succeeded,
however, in getting everything safely out in a
number of trips. Boxes had to go on edge, as
cave too small to take them any other way!

Swam issues out. After lunch, went on
with Mr E to examine rocks opposite reservation
& back from river. Camp meanwhile moved
on. Got back to new camp, a couple of
miles below Indian houses & on W side
of river about 7 P.M., pretty well tired out.

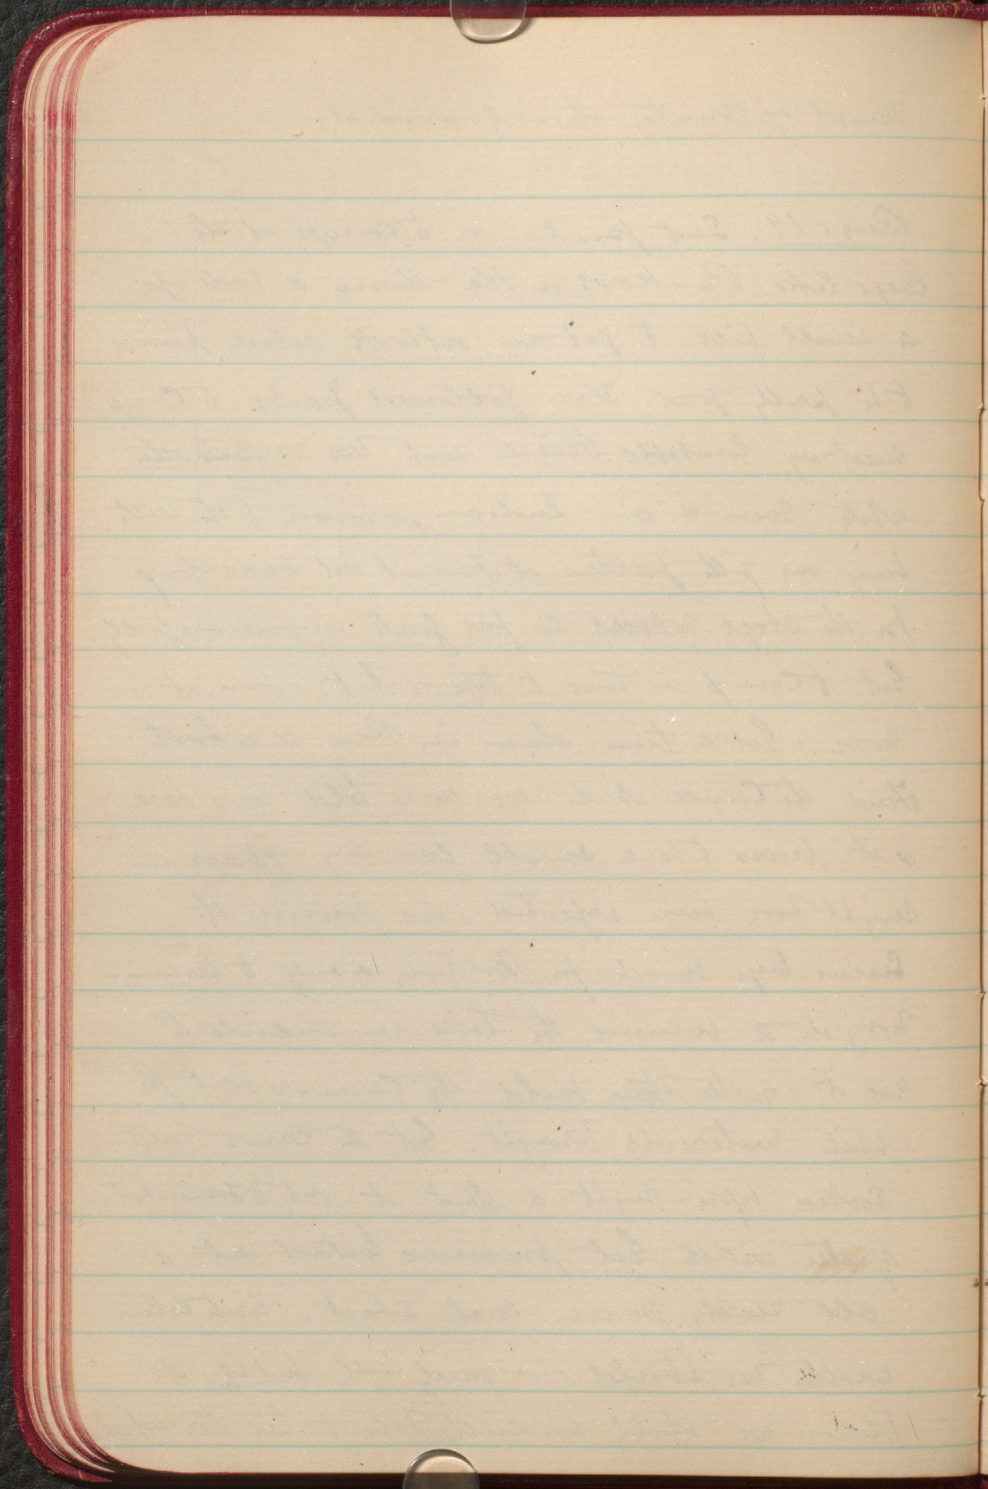

Aug. 18. Set out westward for Pa-Kewo L.
~~From~~ rough crooked climb Indian trail,
climbing gradually to plateau level, & camped
at - sort of end of second or 'Sating Lake'
plus a rather long day with short mileage.
Lake very pretty, occupying a little basin in
the plateau & surrounded by well grown
amburmit woods. Seid the full of trout.
Remarkable antiphonal concert by loons
this evening, assisted by a number of
elbows round the lake. Camp on a
park like & attractive open slope, though

most of country thickly wooded.

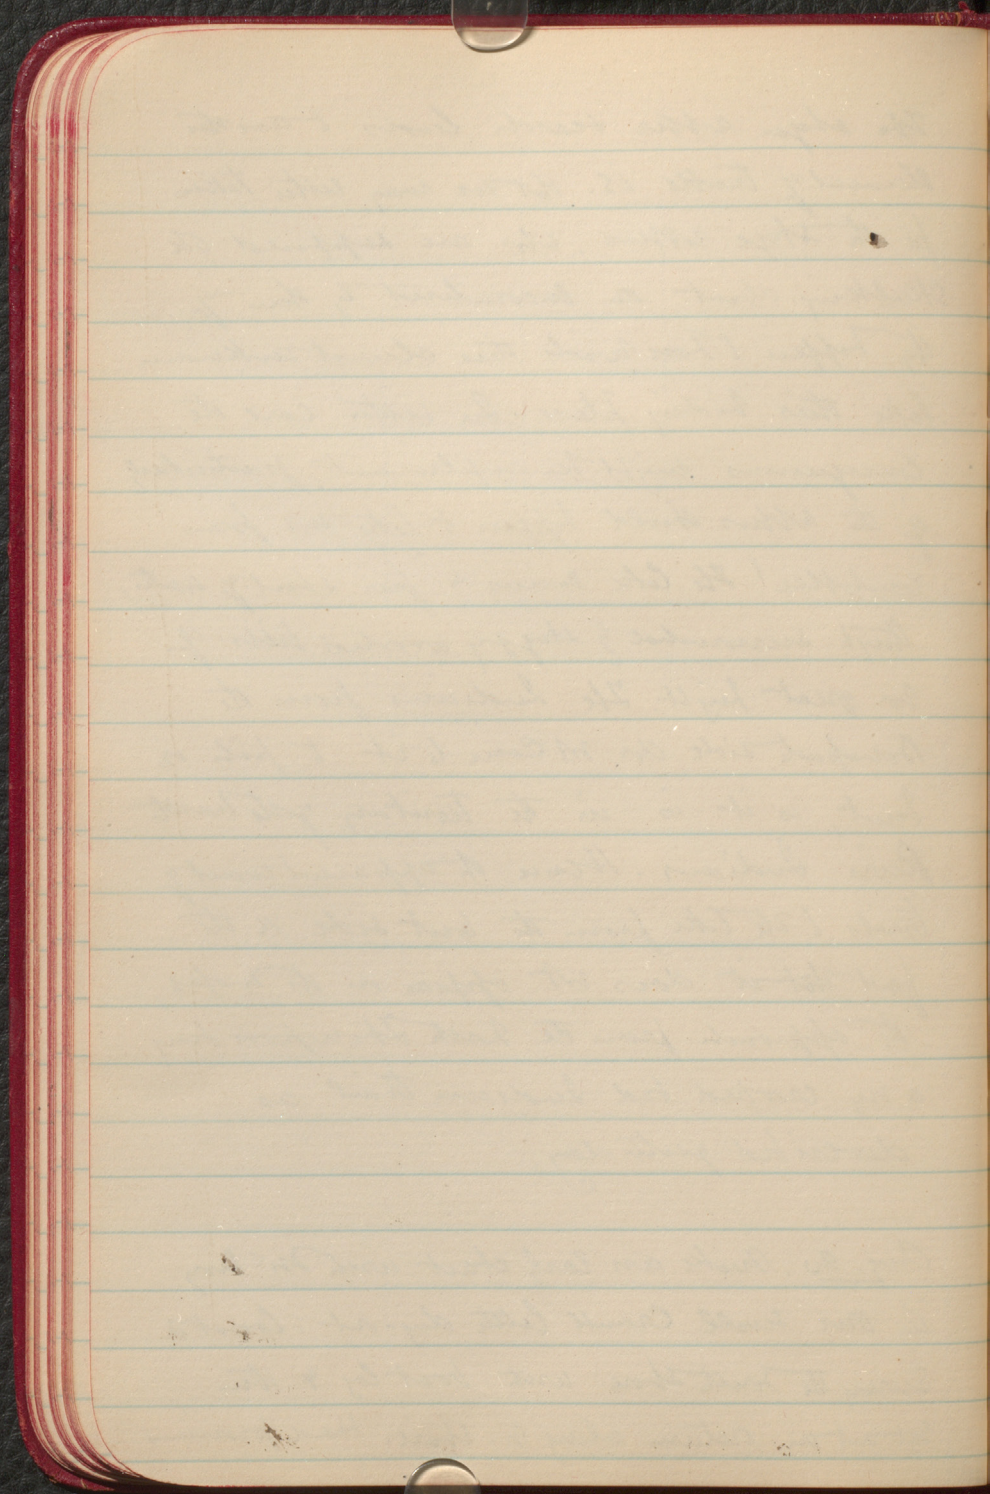

Aug. 19. Sent packs on to camp at the large lake Pa-Kows or Ka-Kowse & rode up a small hill to get an outlook which proved to be fairly good. Then followed packs to camp, meeting Constable Pierce with two or three other white men & an Indian, armed to the teeth, being one of the parties at present out searching for the stage robbers so far quite unsuccessfully.

Get to camp in time to take a lat. obsn. at noon. Get a time obsn. in Pen & a bath. Find the canoe which we were told was here & it proves to be a small cranky affair as might have been expected. As however, it seems large enough for McEvoy & self to circumnavigate & examine the lake in, decide to use it rather than build the canvas boat for which materials brought. Get the canoe well soaked before night & strut it out to somewhat greater width. Get provisions looked out & all ready for an early start. With calm weather we should do fairly well but if it blows we shall evidently have to lie to some.

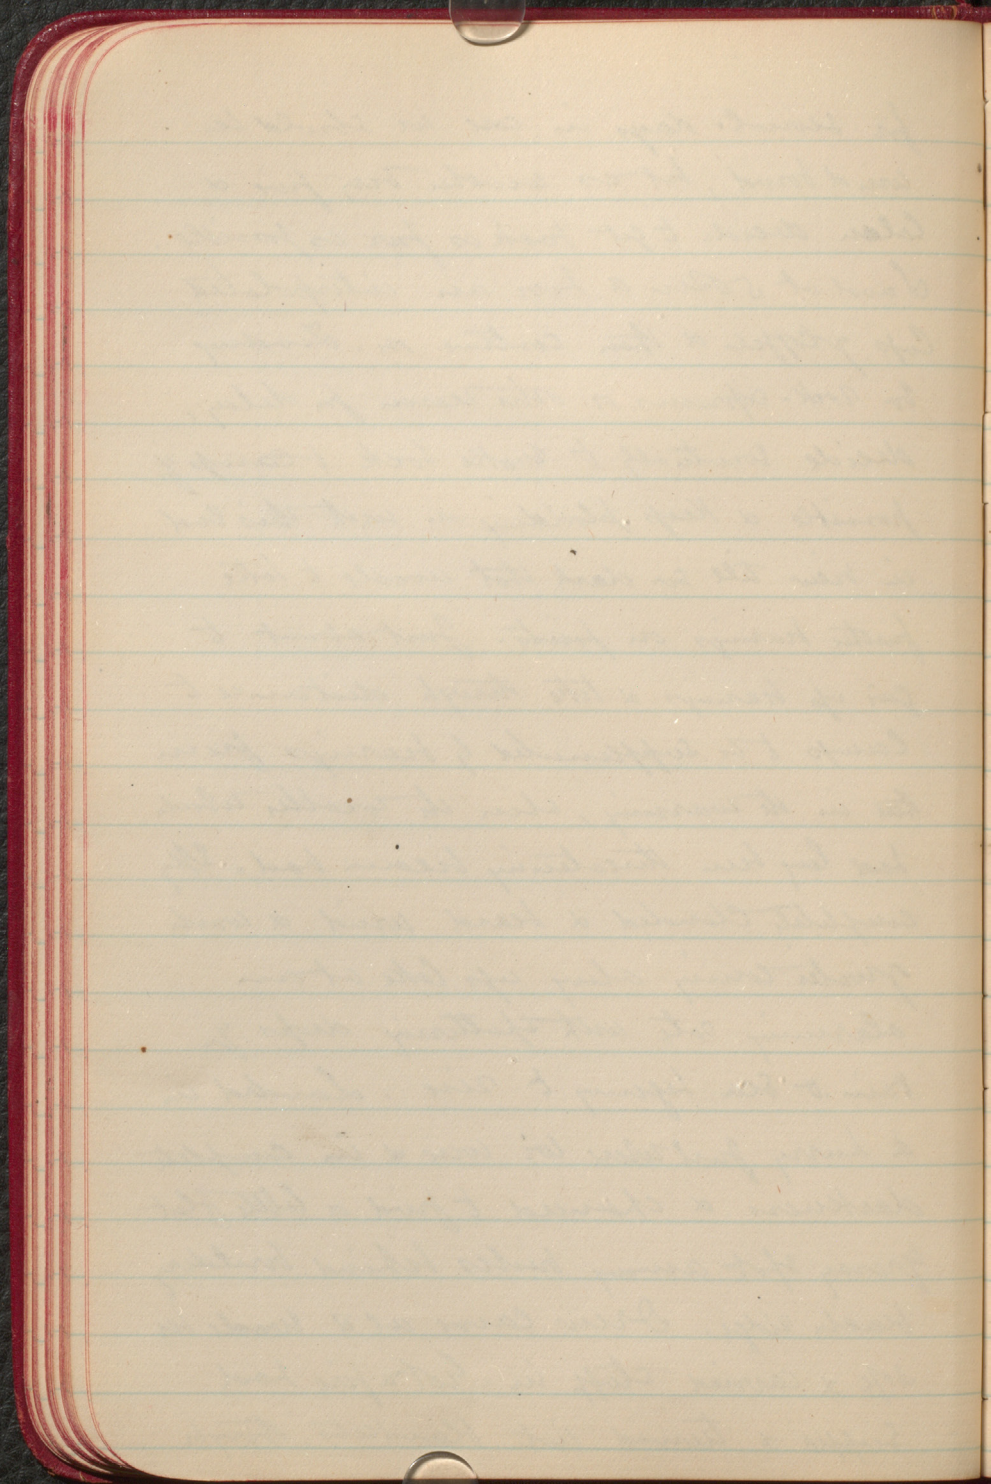

The stage robber search leads to another element of trouble is. That we may either take in for the stage robbers, who are supposed to be skulking about or encountered by them if they happen to have made this almost unknown lake their hiding place. In either case the consequences might be unpleasant, particularly if the robbers should happen to take us for cowboys! The lake seems a fine study water, though surrounded by stogy wooded hills of no great height. The Indians from the Nezapate side do not come to it to fish or hunt, as it is in the territory of the Harsho River Indians. Hence the apparent want of trails to the lake from the west side & the fact that it does not appear on the maps, the approach from the North Thompson being a very crooked bad Indian trail as described yesterday.

Aug. 20. Make an early start with McEvoy in our small Crank little day-out. Coast & survey the South Shore with boat log & then set out on return along N. Shore. Had previous

for several days in case we should be
wind bound, but as weather began fine &
clear decide to get back as far as possible.
Landed at 5 PM & have an interpolated
Cups of coffee & then continue on. Finding
no rock-exposures or other reason for delay,
decide eventually to wade back to camp if
possible & keep plodding on with this end
in view till so dark that unable to take
further bearings on points. Just about to
give up bearings & take through distance to
Camps to be supplemented by bearings from
there in the morning, when the weather which
had long been threatening became bad. Sky
completely clouded & heard wind & wash
of water coming along up lake at an
alarming rate with spattering drops of
rain. Sea began to rise. Landed in
a hurry just where we were & in complete
darkness & chanced to find a little flat
grassy spot among bushes behind bouldery
beach ridge. Drew canoe out & waded her
safe & carried stuff in. Got a fire had
supper & turned out blankets, though

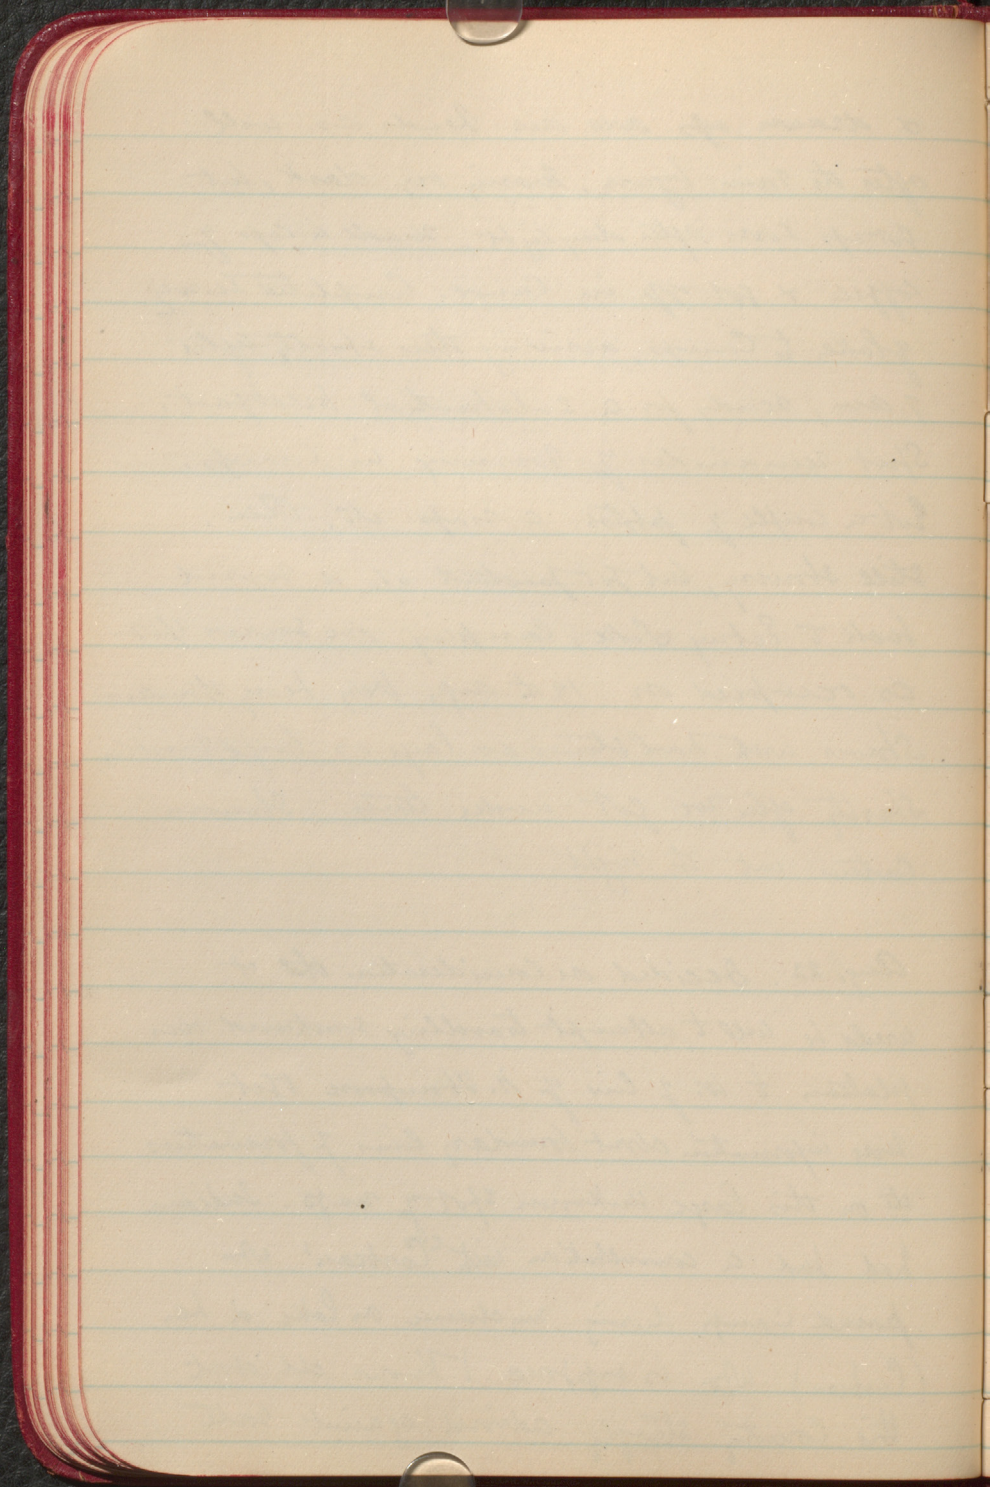

much disappointed to be caught thus when
only about 2 miles from camp, saw
& shot two deer along the shore in the course
of the day, but both were able to get away into
thick brush where we were unable to find or
follow them. Caught a couple of prairie trout
with troll which had at pr less than half an
hour. Heard a shot back in the woods
but very far from lake when near its
lower end. Did not know whether meant as
a signal to us to communicate or not, but
took no notice of it. Indians say that there is
no possible trail on either side of lake, which
on looking at tangled state of woods can
well be believed. No signs of camps around
the lake, the Indians evidently hunting round
it in canoe & returning to main camping
place at the head. It is in the territory of the
North River Indians & is not visited or
seldom from the Bonaparte River side.

Aug. 21. Heavy rain toward morning
rendering our bivouac uncomfortably wet,
though we had a fly spread over our blankets

[Faint, illegible handwriting on lined paper]

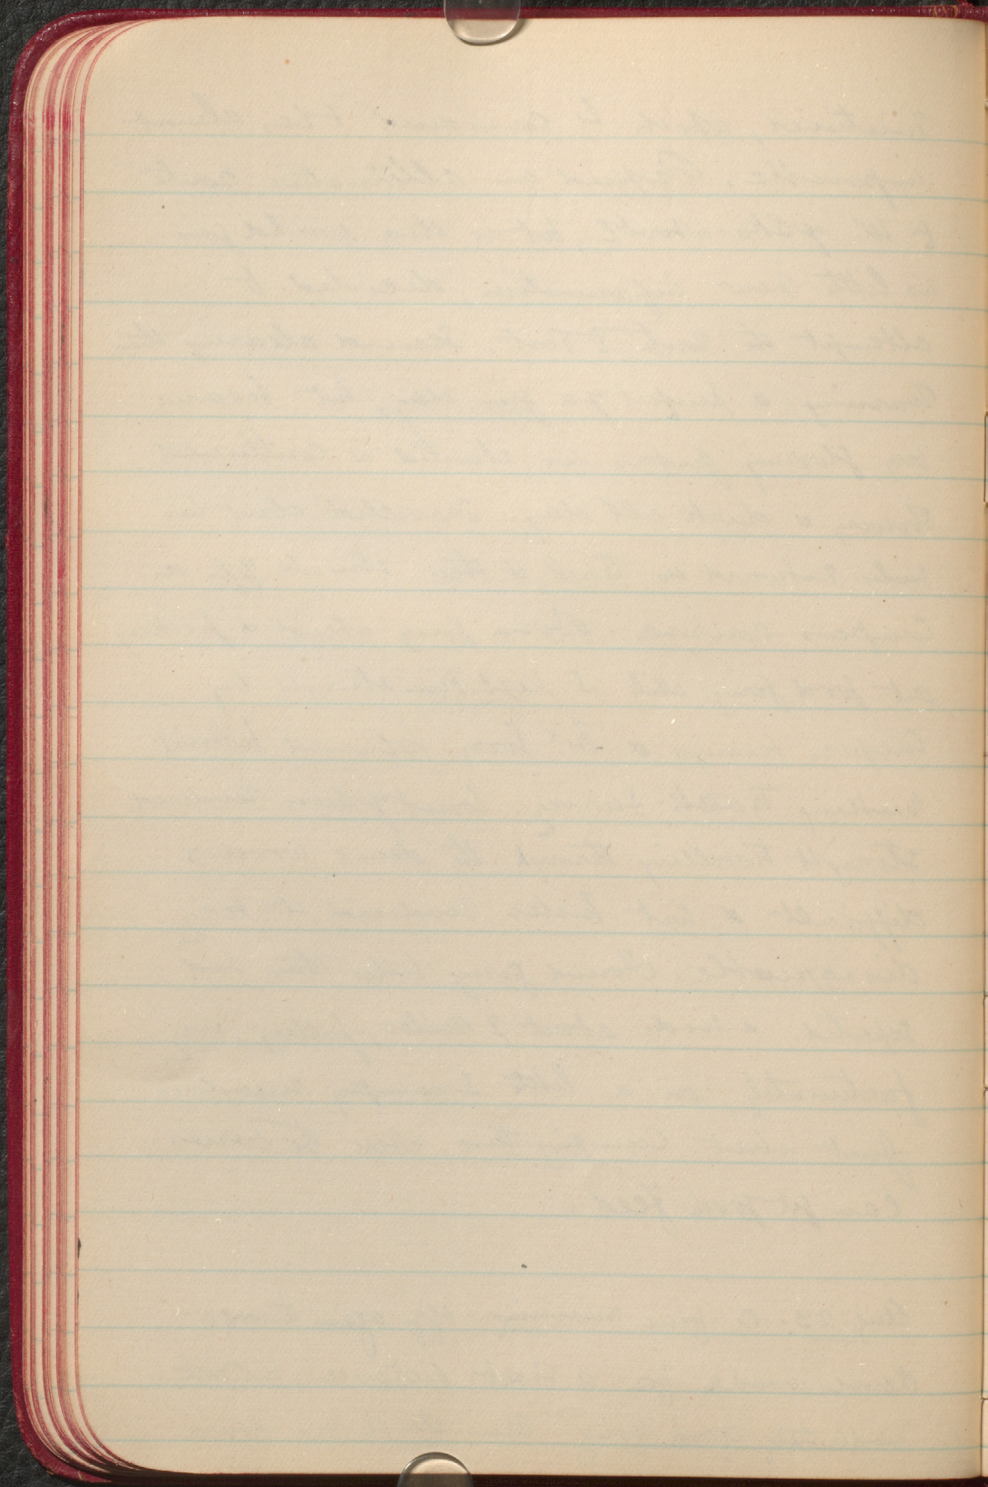

& drawn up over our heads as well
after the rain began, turning very dark, but
got up soon after daylight, made a cup of
coffee & got off in canoe. Completed survey
of lake to camp, arriving there shortly after
7 am, ready for a substantial breakfast.
Spent remainder of morning in camp.
Got a couple of photos, a nap etc. Rain
still stormy, but got packed up & moved
back to Eating Lake, camping on same spot
as occupied on 19th Aug. Very heavy thunder-
storms with hail stones as large as large warblers,
shortly after we got under tents. Storms
continued into the night.

Aug. 22. Decided on consideration that it
would be well to attempt travelling southward over
plateau to W. of line of N. Thompson to get
more information about boundary lines of formations
etc on this large unknown spot of map. Indians
had had a consultation with "Corbeau" who
found camp during my absence on lake & he
(Corbeau) who is supposed to know all about
this country strongly advised against route

mentioned, which he considered to be almost impossible. Proposed an alternative route to W. of Sko-wootl, but as this would give us little new information, decided to attempt the route to East. Secured clearing this morning a perfect ya fire day, but became very gloomy just as we started & continued stormy & dark all day. Travelled about two miles outward on trail & then struck off on Campes course. Bona going ahead & picking out food going while I kept him straight by Campes, Kanyis & Mc Lory followed behind making track-survey. Country seen rendered straight travelling through the dense woods difficult & wet tracks rendered it very disagreeable. Found going better than had expected & made about 7 miles, falling, very fortunately, on a little swampy meadow just about camping time, where the horses can get good feed.

Aug. 23. A fine morning. off again through dense woods for a short distance, but with moderately good going. Then strike bad down

timber which looked not unpromising. By great good luck find a belt of standing trees through which we manage to pass for some distance. Then again we had fallen logs, but after some delay & cutting got into valley of a small stream which evidently the upper part of 'Skull Ck'. Stop for lunch & get fairly good going most of afternoon over country which has been pretty completely burnt off. Saw, & Purpure shot at, three deer during day, getting the last just before camping time. The Carcas. hauled into Camp. Camp beside a little pool with good feed in bones around margin & full of pond-lilies in the centre.

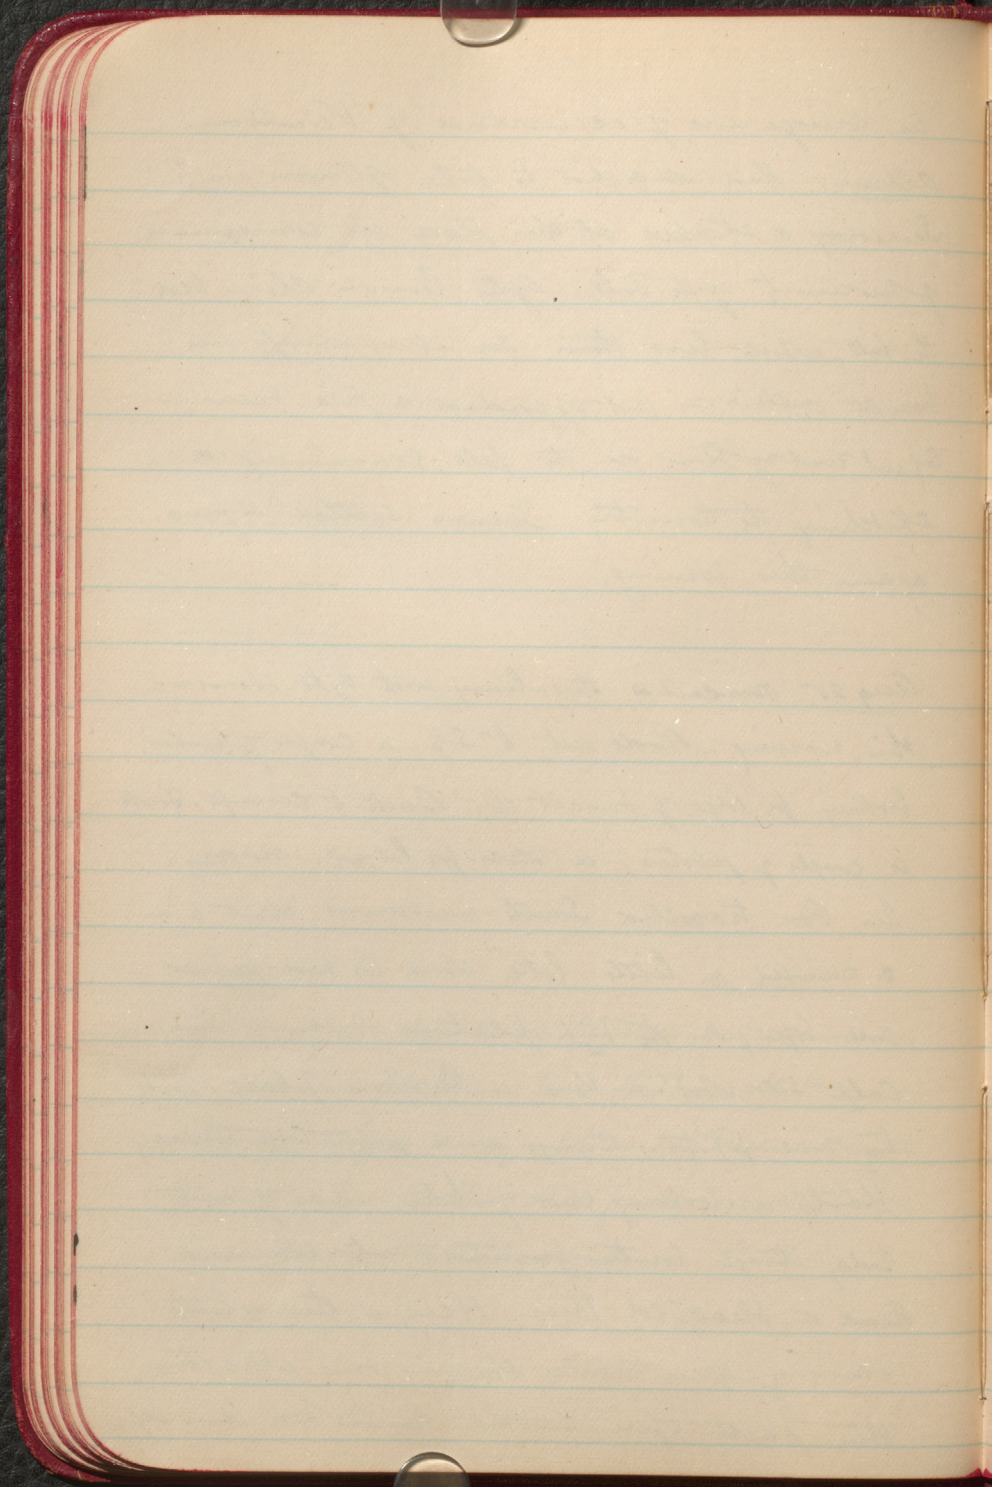

Aug. 24. Sunday. Light showers during the night & on into morning, giving us a rather late start. Strike a lake of same size just after leaving Camp & follow round its north side, only to be turned back & had down timber & obliged to return much of way along south side. Then found better going & kept on till about noon, when reached base of 'Poison Hill' of Indians - so named

Caribou

about a generation since Caribou were abundant on this high plateau. Now they have all been killed off or gone away. It is not, however, very far to where Caribou still found, as they come down nearly to the Clearwater on the In. Thompsons.

In consequence of occurrence of Veratrum album. Had decided to take afternoon as Sunday & stopped at this place in consequence of proximity of the hill. After lunch climbed the hill, which less than 300' above camp - a basalt outcrop - but afforded a fine view. Spent rest of day on the hill, examining & sketching the country. Seems settled & fine again this evening.

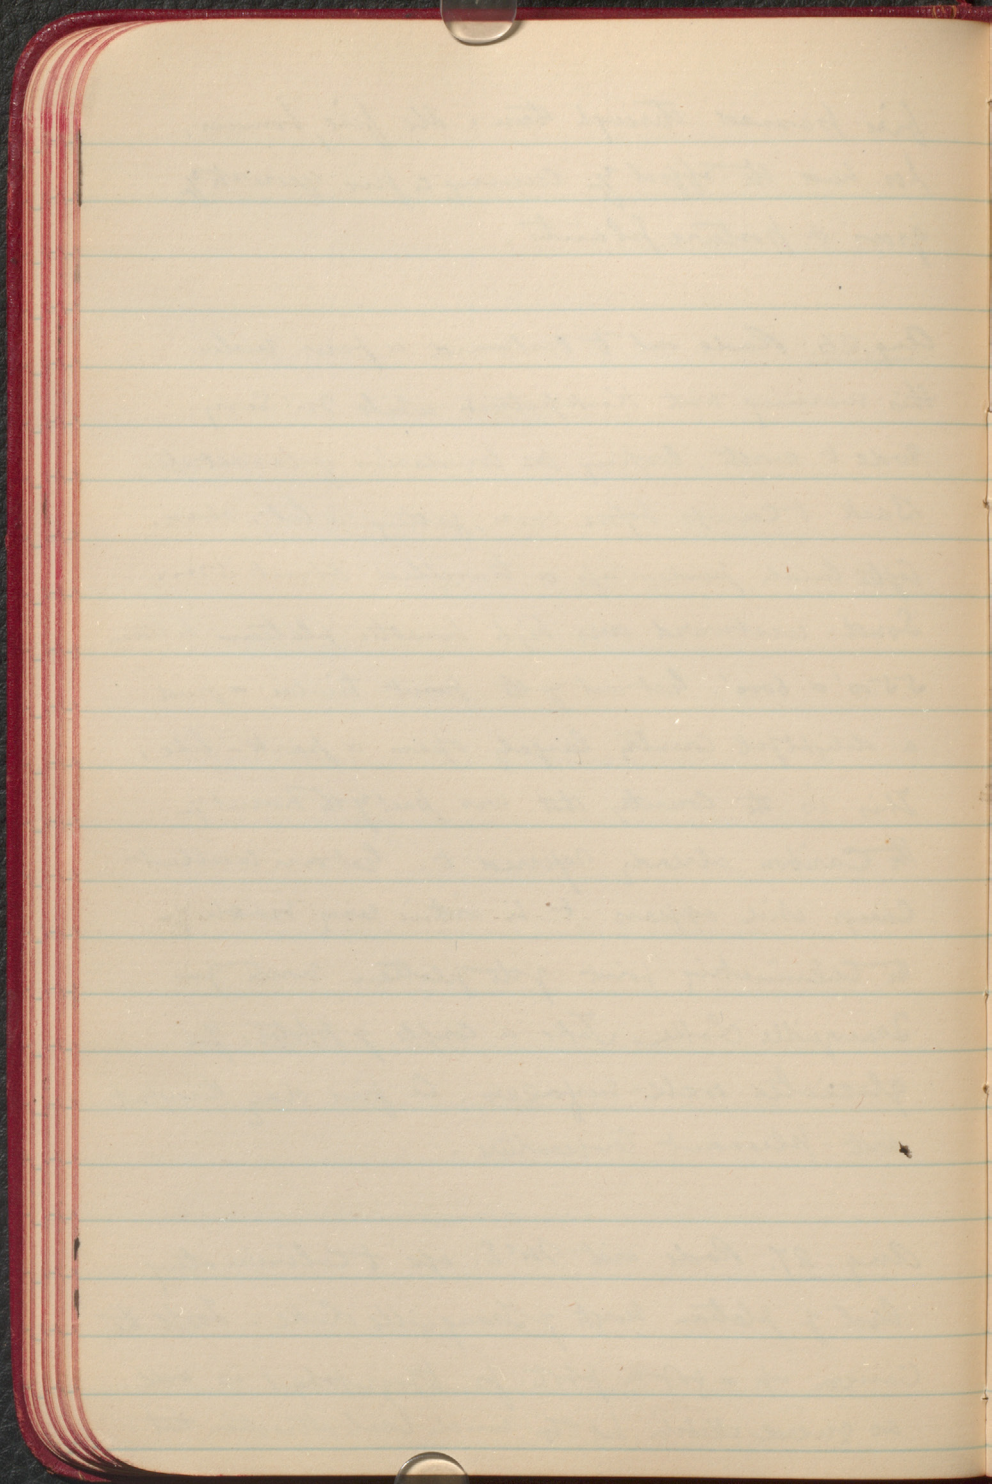

Aug 25 - overcast & threatening with light showers this morning. Rode out to S.E. a couple of miles looking for edge of basalt etc. Back to camp. Took a couple of photos. & obsn. for lat. at noon. In P.M. travelled South-westward about 6 mi. & camped on little lake which we had passed once before, on the high plateau which the Indians call Sie-Whoi'-a-Kum or Caribou-place. Took two more photos. Camp on a pretty little grassy knoll overlooking end of lake. Most of route today through country forested with stunted dead & bleached trees. Here & there a little oasis of green timber showing how attractive the partly open woods must have been before

fire passed through them. The fire, however, has had the effect of causing a fire growing grass & pasture plants.

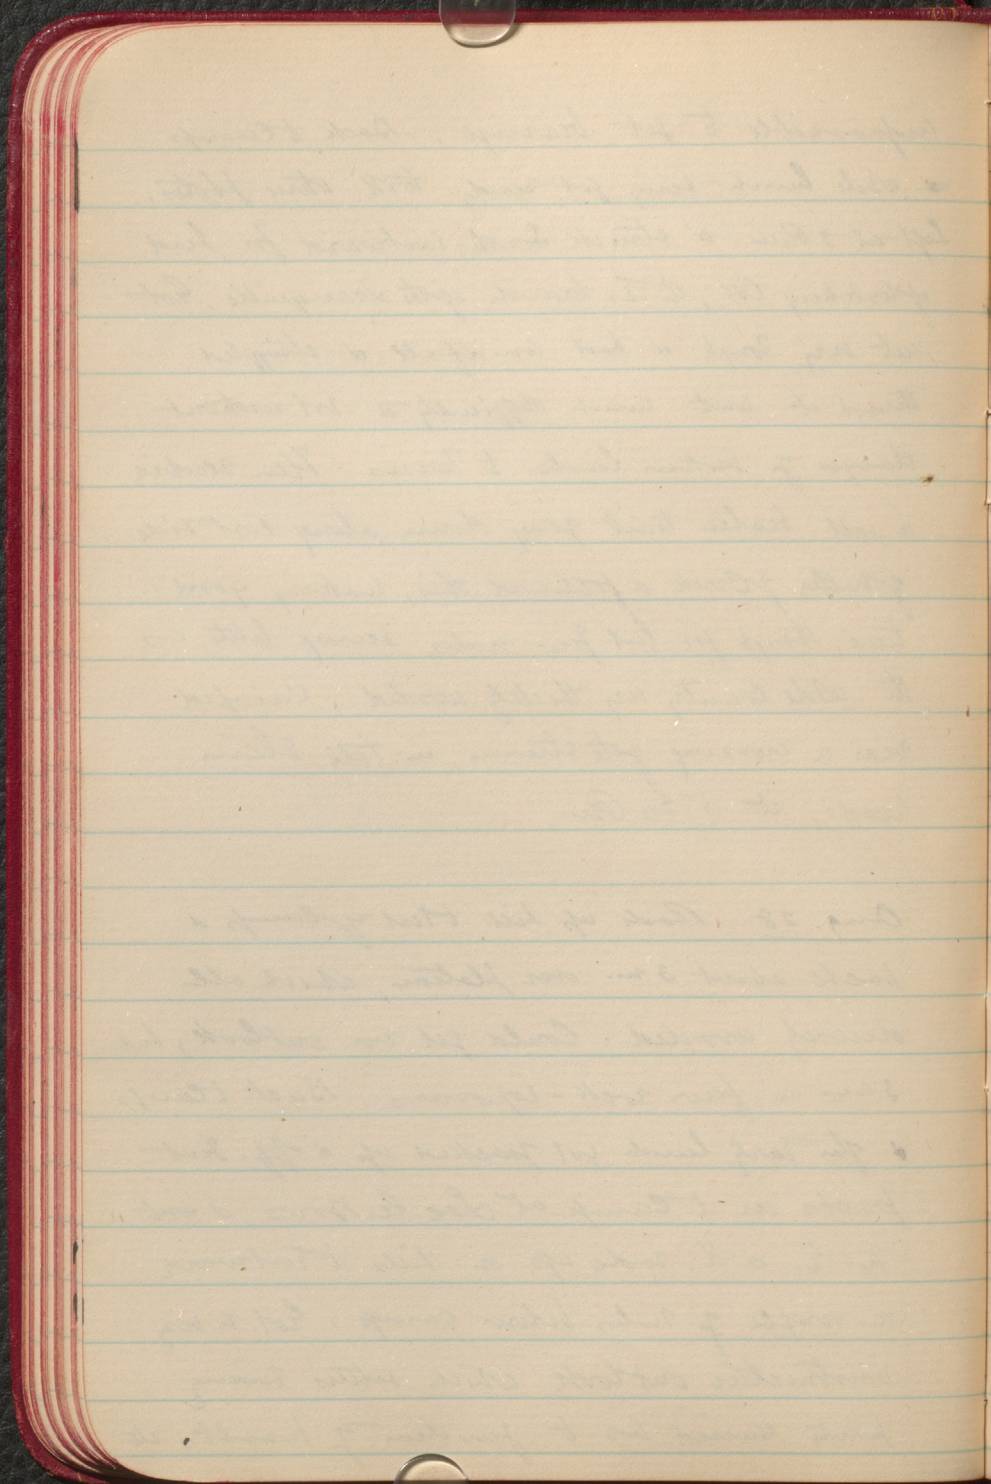

Aug. 26. Rode out to eastward a few miles this morning with Kerkpatrick while McEwen rode to south, looking for boundaries of basalt etc. Back to camp before noon, getting a lot. obsn. After lunch packed up & travelled about 5 mi. South-westward over high basaltic plateau between 5500' & 6000'. Got out of the burnt timber & find a delightful country largely open & park-like. This is the country that was part of the haunt of the Caribou already referred to. Got an excellent camp which appears to be within easy reach of the culminating point of the plateau north of Tranquille Lake. Take a couple of photos of glaciated rock-surfaces. A fine day throughout with pleasant temperature.

Aug. 27. Rode with McE. up to culminating level of plateau north of Tranquille Lake. Took the camera up & got a photo. for topography; as well as general sketch, but for much local attraction that

impossible to get bearings. Back to camp
while lunch being got ready, took three photos.
Left at 1 P.m. & struck South-Southward for head
of Watchdog Ck, the E. branch of the Tranquille. Got
out very rough & had windfall & stumbled
through it with much difficulty & not without
danger of broken limbs to horses. Then reached
a well beaten trail going down along east side
of valley of Creek & followed this, making good
time, though for last few miles seeing little as
the whole country very thickly wooded. Camped
near a crossing of the stream, in tall Elms
woods, at 5:30 P.m.

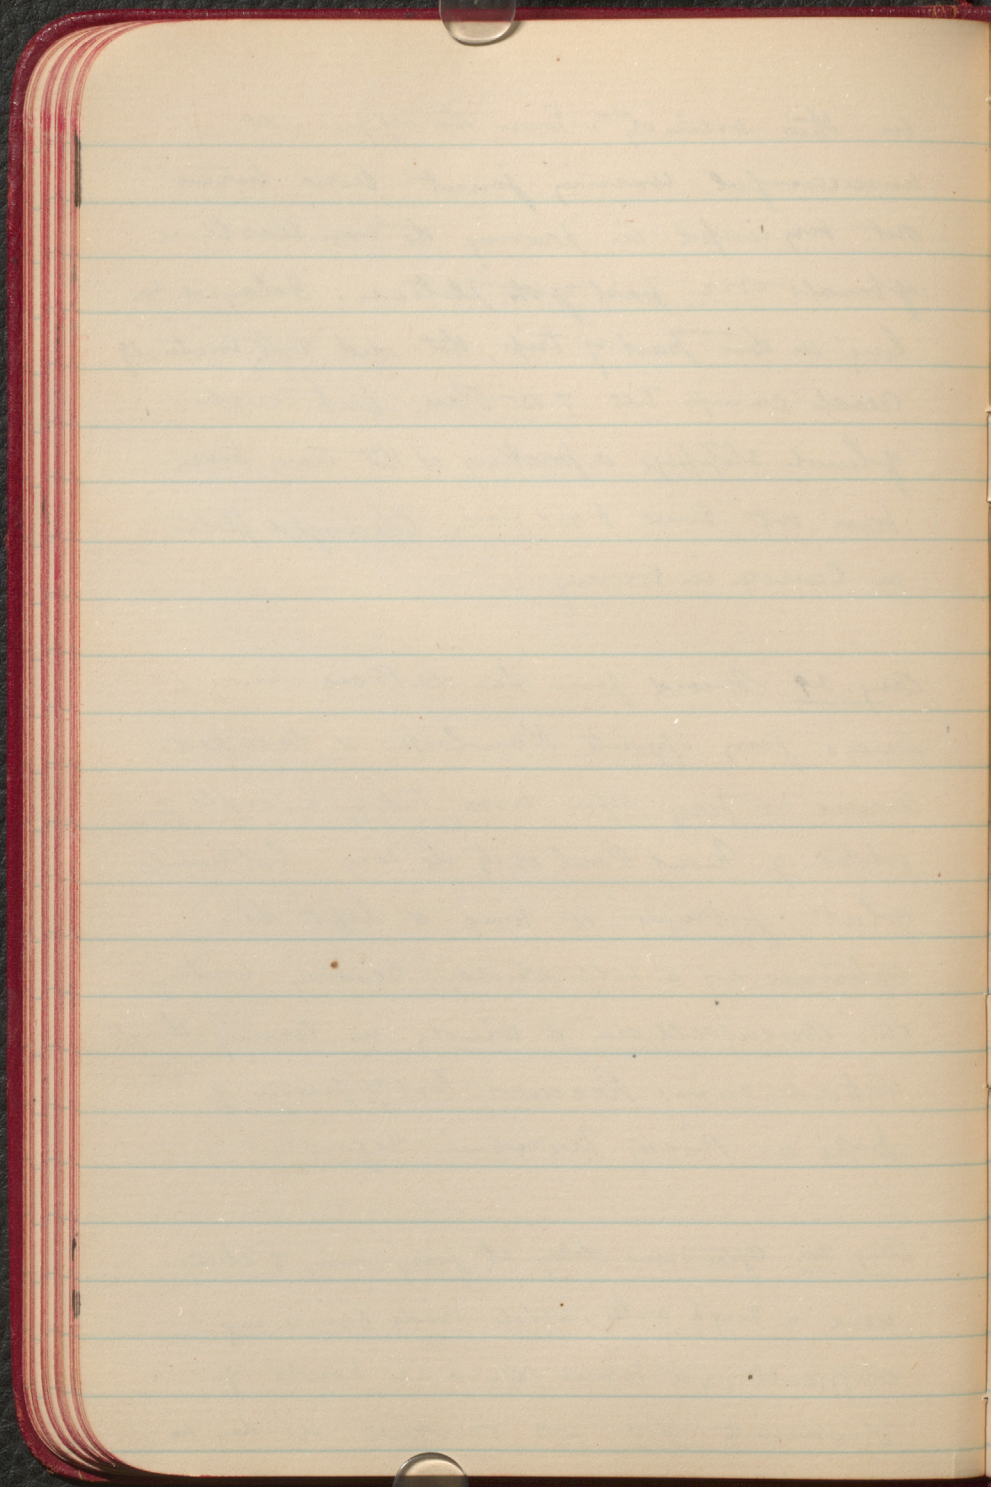

Aug. 28. Rode up hill to top of camp &
back about 3 m. over plateau, which all
densely wooded. Could get no outlook, but
saw a few rock-exposures. Back to camp
& after early lunch got packed up & off. Sent
packs on to camp at Lac le Bois, & with
Mc E. & K. rode up on hills to toward
a couple of miles below camp. Got a very
instructive outlook which settles many
points raised as to junction of basalt's etc

in this vicinity. Even the apparently
unsuccessful morning jaunt now turns
out very useful in proving the non existence
of basal over part of the plateau. Delayed for
long on this part of trip, that did not eventually
reach camp till 7.15 P.M. With exception
of lunch stoppage & packing at that time have
been out since 6.45 A.M. Changed plates
in camera in evening.

Aug. 29. Moved from Lac de Bois down to
Lucy's ferry opposite Kamloops & camped.
Arrived at ferry before noon, taking a couple of
photos of Mount Paul on by the way. Got mails
yesterday - tonight or was & kept the
afternoon as a half holiday, reading writing
etc. Overcast all day & windy in evening though
without rain. Received lot of proof of
pops in Rocky Mountain region.

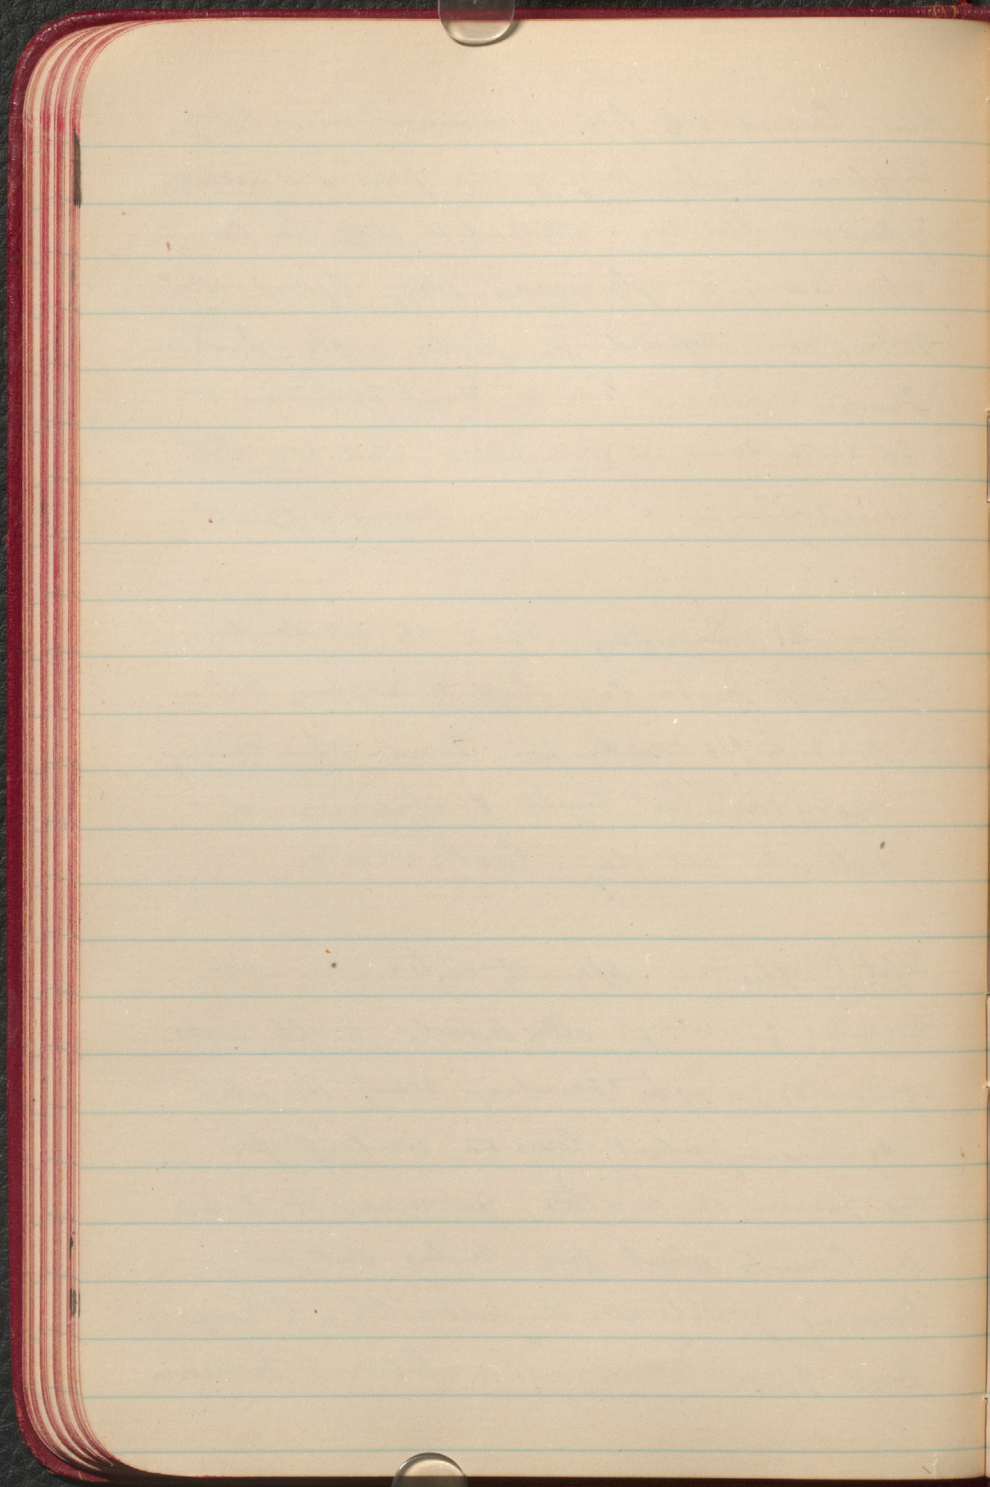

Aug. 30. After some delay at ferry owing to strong
wind & rough water, which made crossing
difficult, got horses over & in hands of
blacksmith who was occupied all day on

them. Crowned self later & ordered new lot of
supplies. Mailed box of P.S. paper & a package
of seeds to Fletcher. Unpacked stuff in camp
before leaving, & afterwards stuff left at hotel,
getting what required for further work. Indian
Pacifier wishes to leave & want Sodeanna to
sit another man in his place, which now that
hunting & laying in progress seems difficult.

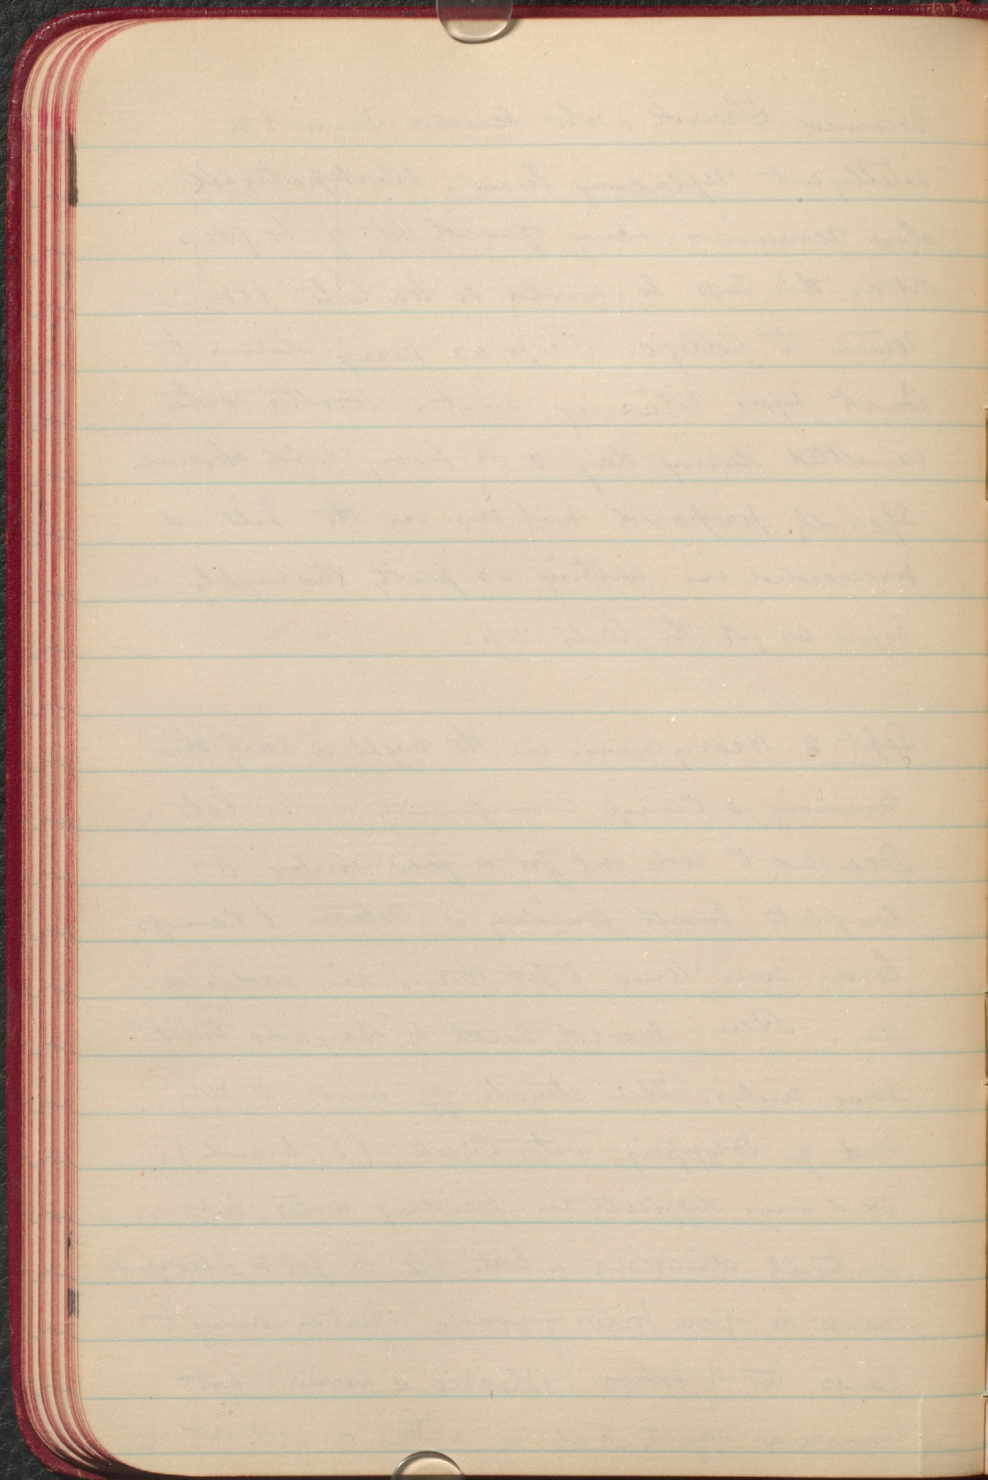

Aug. 31. Sunday. Spent the whole day in
camp unpacking stuff & writing letters
of which 16 ready for mail this evening.
Heavy rain last night & showers at
intervals all day. Cool weather.

Sept. 1. After an apparently interminable
number of delays attributable to all sorts
of causes, & after spending nearly the whole
day running about town or writing for
one form or another, got away at 3.30
& Camp about five miles out at
Crossing of Peterson or Jocko Ch. Prosper
paid off & remains a Selk'et Indian

named Frank, who seems smart & intelligent replacing him. Kirkpatrick also remains, being afraid that if he goes out on this trip he would be too late for return to College. Purposes going down to Coast before returning East. Weather rather unsettled during day & a heavy cold shower. Specially prepared mail us on the hill & succeeded in writing us pretty thoroughly before we got the tents up.

Sept. 2. Heavy rain in the night & early this morning & Camp consequently rather late. Decided to ride out for a few miles to complete basalt boundary & return to Camp, leaving some time to get things in order & dry. Plus. moved south by "Brigade trail" some miles. Then struck off west to very head of Dropping-water Creek, (E. branch). Had some difficulty in finding water, but eventually discovered a little rill & got a pleasant camp in open border of woods. Just in coming to Camp two of horses (Blackie & Warrior) got camouered off the trail by a tree & fell into a

deep brush dry, hole in the bed of the
watercourse. Had something of an opera getting
them both out, but in the end succeeded in
doing so & fortunately found both unhurt, &
only one of pack-saddles injured. Seems
clearing today & a starlight night tonight.

Sep. 3. Light showers in the night, but a fine
morning. Rode out west McE. to westward &
lucky in striking a good cut-out in that direction
by Newman, who we met at a meadow where
he has a small cabin & was engaged cutting hay.
Obtained some information of routes from
him. Found patches of basalt & granite. Then
moved camp, travelling southward & then
westward & camping on Moore's Ck. near
its head, preparatory to further exploration in
vicinity.

Sep. 4. Rode up valley to northward, but
did not get far owing to thick & tangled character
of country. Saw little rock & rather disappointing
in result. Then rode out to west, occupying
from noon to 4:30 but again into thick difficult

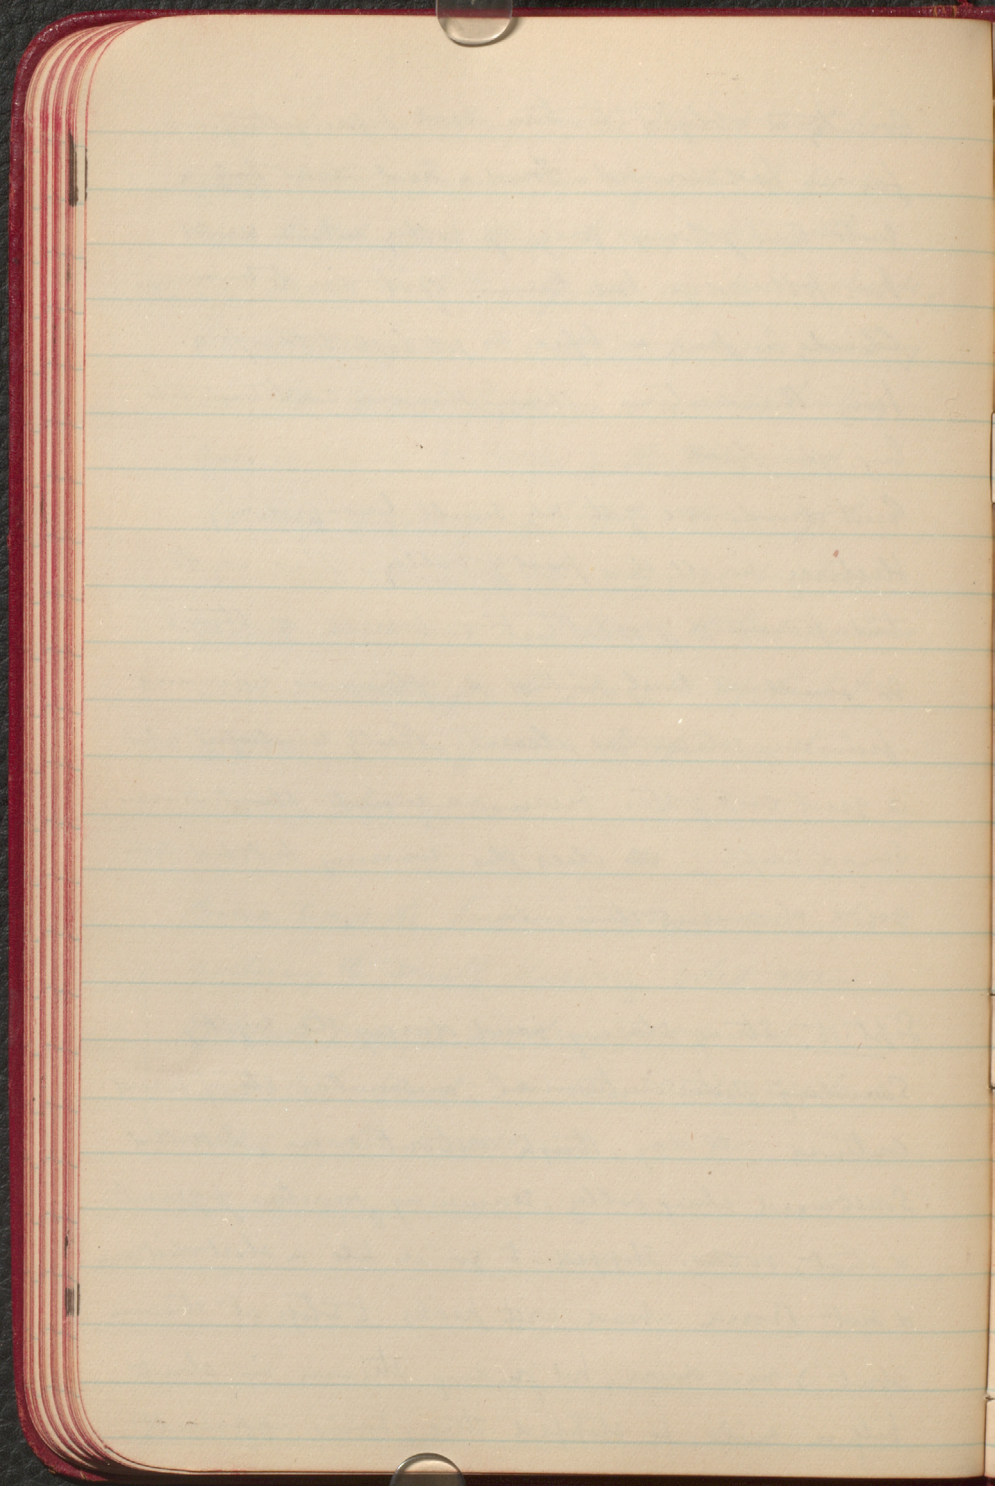

an Indian asking another to hunt with him
Swiss to the companion so requested the first
deer killed, soon though the arguement of the
trip should shoot it. If only one killed divide,
but the skin goes to his companion in any
case. ~~but~~ If an Indian should be hunting
near or beyond the border of the recognized
hunting ground of his people & one of the
Indians claiming the adjacent hunting
ground should have been shot, the post-winter
Indian heads for the place & expects to have
a combination feast on the spot in the
quarry shot by No. 1.

Bona says the Indian women use, for
gathering the small blueberry which on
opposite page, a wooden scoop with a
comb-like front & thus really comb or
rake up the berries.

County & obliged to turn back before getting as far as had wished. Found a trail about half a mile west of Camp going up valley which would have followed if had known of it in the morning. Cloudy in pm & before we got back to camp a heavy thunderstorm. Heavy showers continued till long after dark.

Great abundance of the very small low-growing blueberry in all this part of valley. This is the best flavored of all the blue berries & though so small is easily picked & afterwards removed from any extraneous leaves. Really wonderful what a great crop of these berries a minute plant bears. Saw a couple of ~~the~~ deer this morning but did not get a chance at them.

Sept. 5: Strong stormy wind during the night, sounding quite autumnal, & similar as strong wind continued all day, though without rain. Traveled Southward along valley, examining junction of granites & strat. rocks. Stopped to go on file a short distance & sent Bona ahead with packs to stop at stream about 3 m. down, but finding stream in about half a mile, he stopped there, having apparently

no idea of distance. After lunch decided to follow up valley of trib. stream which seemed good going a to run west, but found the stream to head in springs at a short distance & the course of bot remained of valley to become nearly north, so having got to the E. edge of the granite (which further back than usual) definitely here, returned & followed down valley to where we found the fossils
Camped

Sept. 6. Off at 7 am & rode down valley about 4 mi. Then turned off up hills a mile or so & eventually back to camp at 1 Pm. Lunch, packed & moved off toward camp at Scott's ck, near lower end of Stamp L. Stopped & took camera off pack to get a photo. of Stamp L., which looking very pretty among its yellow grassy hills under afternoon sun. Bordered by dark green bushes & dotted over with innumerable water birds (ducks, doves etc) Then left packs to go to camp & rode off to mines. Visited 'Joshua mine', which the only one actually working. Got to camp at Scott's at 6.20 Pm, after a rather long day. Splendid rose sunset. Changed plates in camera.

Grasses

The introduction of some grass or grasses from Australia, Patagonia, or other dry region which would flourish in this dry Collette County of B.C. & would be more tolerant of frost & less easily killed out than the present 'bunch-grass' would be a worthy yet first importance to this whole County & is well worth looking into.

Indians here say that the face of the moon shows the figure of a man with a basket on his back. The name of this 'man in the moon' Whá'-lá.

Shun.
In some connection with the story of Skid-oo the Coyote Culture-hero, said that the Coyote at one time either placed in the sky for the Sun, or placed on the Sun. Found that he called out aloud whenever he saw any Indian stealing or otherwise misconducting himself below & this found so inconvenient that Coyote deposed in some way. Some other being then placed in charge, but the sun altogether too warm. Lastly a third Custodian chosen when all went well. (Informant does not know particulars of this story)

Sept. 7. Sunday. Sent packs off to Camp on Nicola & bear inflow of Nicola R., at same spot where had camped last summer. Rode up hills with N^W & South westward across a block of country not previously cut up. After some difficulties & trouble from wire fences, got down to Nicola R. at old road crossing, & re-erected Camp hungry at 2.30. The help holiday which had intended to keep this cut rather short, but got a bath, did a little reading & took a photo. of the salmon like fish which I have suspected of being a land-locked salmon, which inhabits all the large lakes apparently, & is now beginning to run up the streams to spawn. A fine day with floating clouds & very pleasant temperature.

Sept. 8. Sent packs on to Douglas L., & made a detour to south of road to examine section seen across valley yesterday. Got to Douglas L. 1.30 P.M., & got lunch at our hills to north of Douglas L. trying to get boundaries for granite glimpsed last year. Granite area turns out much larger than had supposed & did not manage to outline it satisfactorily, though out-tide 7 P.M. Camp on border of the lake, not

Lillooet name for Pleides

In-möt' = cluster or bunch

Great bear known as Mē-hätl'

= bear

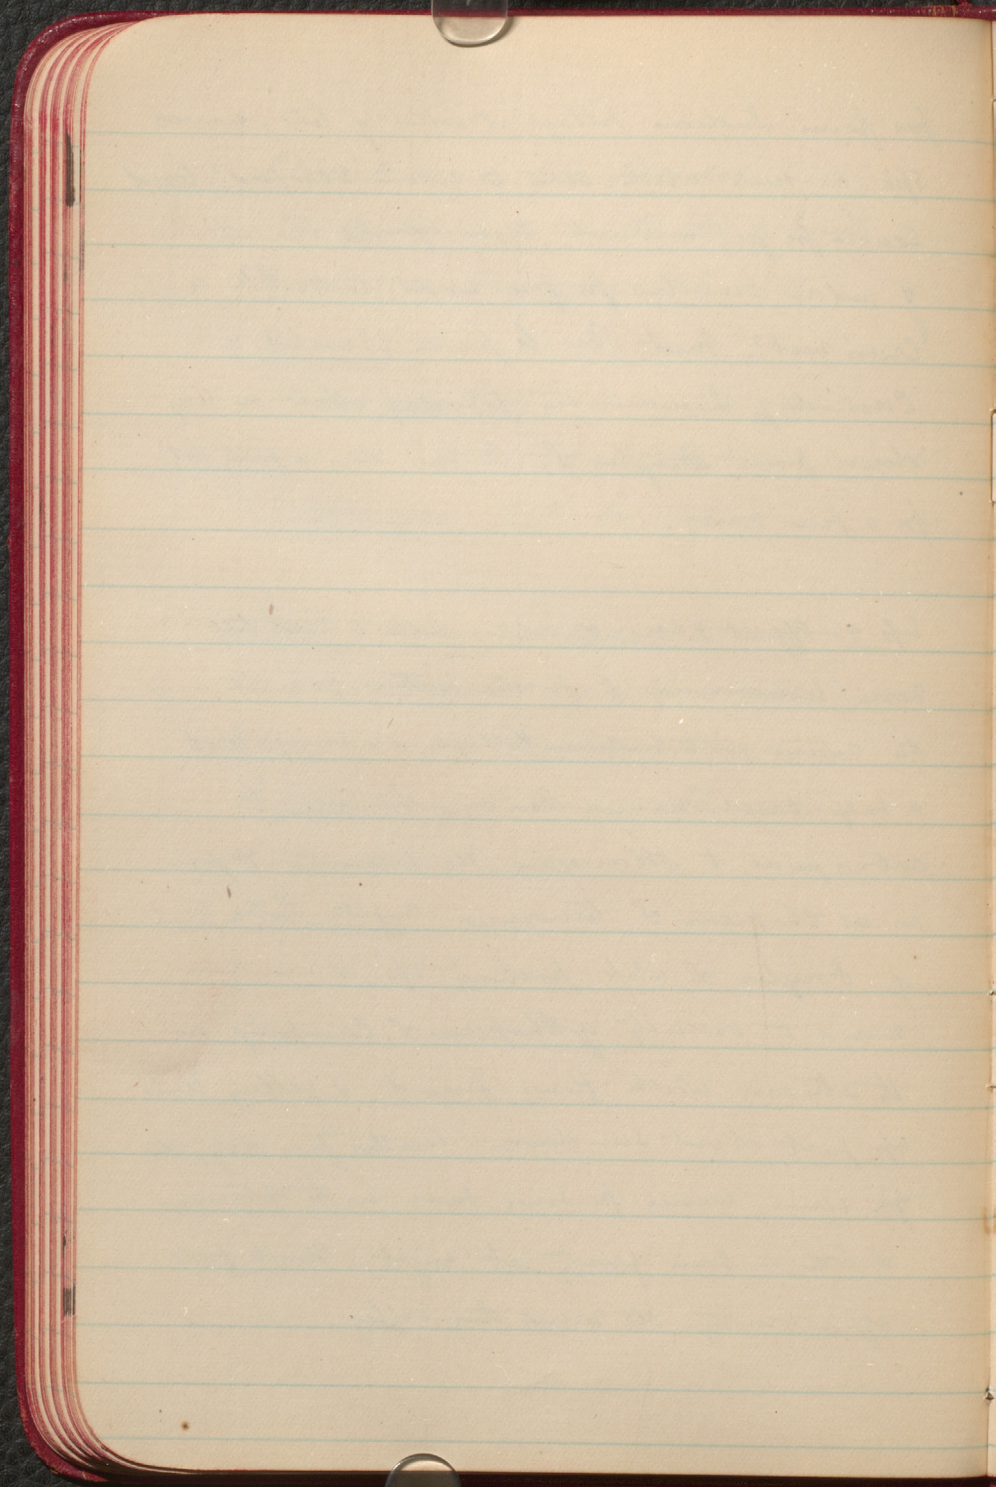

Name of the little Salmon-like fish
found in lakes. Kamlwaps Kuk-en-ouh'

Okinagan Kuk-en-eh'

Said to be very few words the same in
Kamlwaps & Lillooet languages, a good
many the same in Kamlwaps & Okinagan.
A good many the same in Thompson
& Okinagan.

fur from Indian village at outlet of lake, named
Spá'-ha-min which said to wear 'Seroped'. Wood
scarce for fire & Frank remarks that his collection
of willow branches for fire-wood looks like a
'Crows' nest'. Meet Pere Lejeune escorted by a
Conteade of Indians in Sunday attire on way
down from Douglas L. A fine day & quite hot
for a few hours.

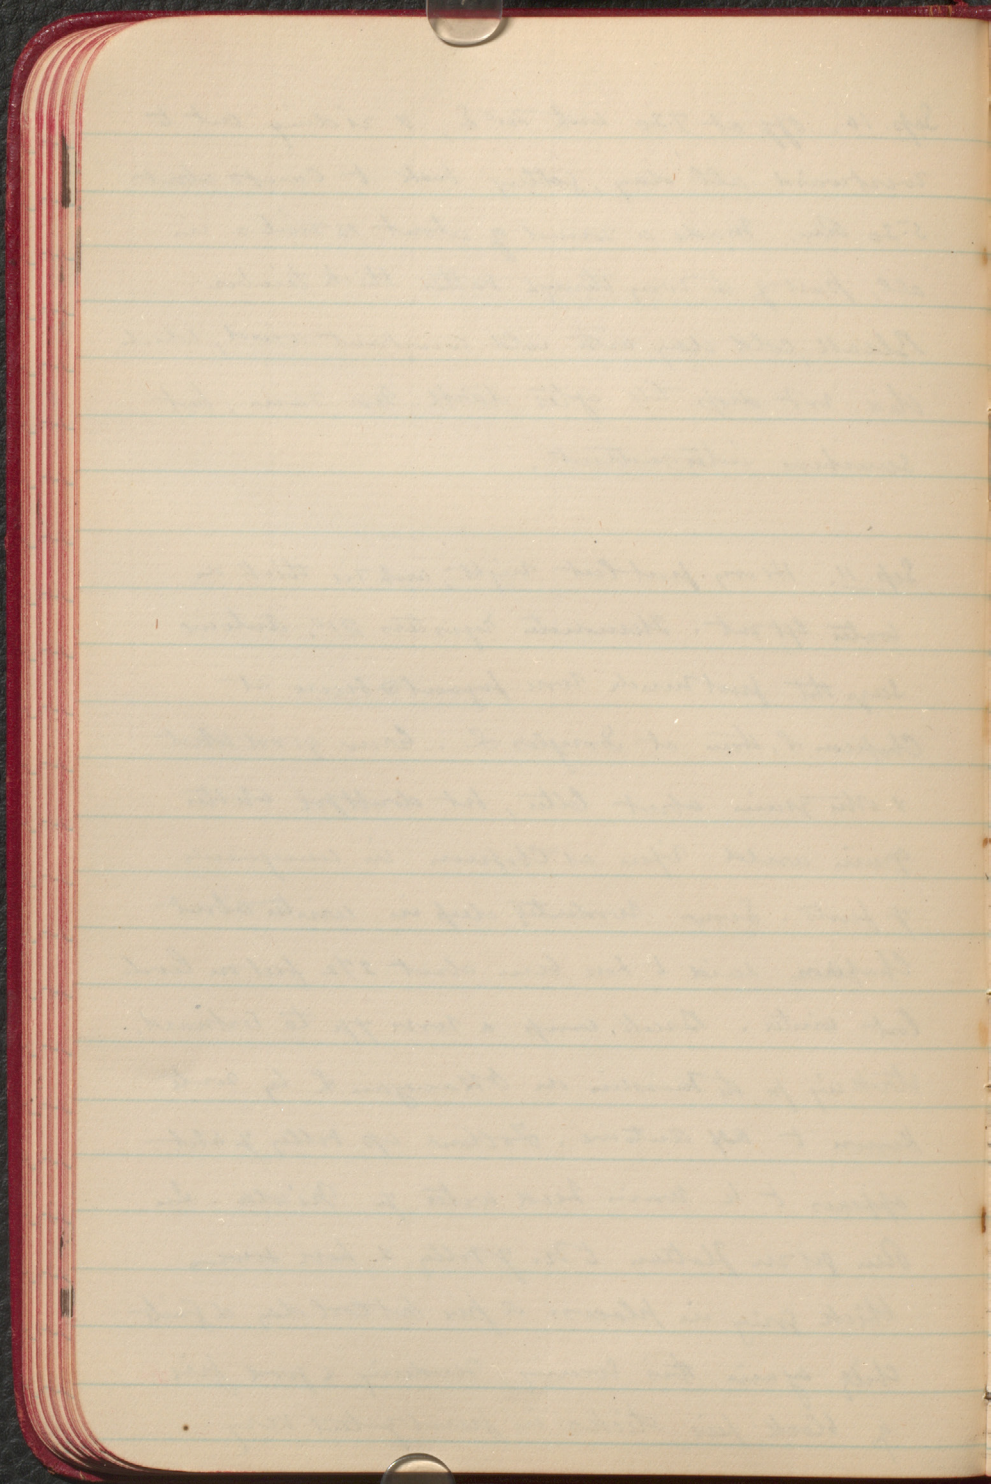

Sep. 9. Off at 7 am. & out on hills & new tide
now endeavouring to further outline granite area.
On return go to Indian Village, & arrange with
a half-breed named Antoine Sampson to
act as guide to Okanagan, He promises to join
us at Chaperon L tomorrow night. Got a photo
of Douglas L. while packing up, & in P.M.
went to vicinity of Chaperon L, camping on
the stream which flows from it, & getting tents
up just about sun down. Another fine day, we
of a series, warm for some hours in the afternoon
& cool or even frosty at night. Much fine
open country all round this valley.

Sep. 10. Off at 7.30 with M^cE, & riding out to westward all day, getting back to Camps about 5.30 Pm. Made a round of about 15 miles in all, part of the way through rather thick timber.

Bleak, cold day with cold constant wind, which did not drop till after dark. No rain, but sunshine intermittent.

Sep. 11. Heavy frost last night, with ice thick on water left out. Thermometer registers 21°. Antoine says that frost much more frequent & severe at Chaperon I. than at Douglas I. Grow good wheat & other grain about latter, but doubtful whether grain would ripen at Chaperon in consequence of frosts. Some woodcutters deep in winter about Chaperon said to have been about 2 1/2 feet on level last winter. Break camp & move up to eastward, striking for the mission on Okanogan I. by route known to ~~Antoine~~ Antoine. Follow up valley of what appears to be main head water of Nicola. In Pm get on plateau to N. of valley & here some thick snow in places. A fire but cool day & quite chilly again this evening, kindling a good fire of black pine sticks in front of tent very.

acceptable. Camp in pine woods near
bank of the stream, the whole country beyond lunch
stop being thick wooded.

Sept. 12. Traveled on south-westward, under
guidance of Antoine, making about eight
miles in all. Met with some heavy windfall & had to
chop a number of logs for a distance of about a
mile. Stopped for lunch in the windfall & moved
on in P.M., camping near the communicating point of
Plateau between Cheperon L. & Okanagan L.
at about 5200', with intention of occupying the
point in the morning. A very hard frost last
night, the thermometer registering 19° , but warm
& pleasant during the day. Horse known as
'Pemmican' has been limping along for some days
Sept. & on a sprained leg. Having a spare horse
since Kirkpatrick left, we fortunately were
able to let him run loose. His name,
however, 'Warrior', or 'Wai'ai' as the Indians
get it, has so bed a back that obliged to
let him down & pack leave Pemmican,

Undergrowth of forest above 5000'

The very small fruited blueberry, ground

Sometimes carpeted with these.

Large-fruited do. or 'buckleberry' occasionally.

Lupin (not in very thick woods)

Rhododendron (often in very thick woods)

Veratrum (occasionally)

Valerian (both under woods & at 6000' & +
in open)

Arnica (two species) (as cut)

Sedum (smooth leaved species) (occasionally)

Pachystima (always in shade, but at very
great heights, say little above 5000')

Aster } (sparingly in woods, more abundant
Cortilega } in open)

Various grasses & Carexes.

Very
at high
alt.

Sept. 13. Took transit, Camera & Sextant, in
small pack on 'Buck' & with M'Erry, Antonio
& Bona climbed to highest part of mountain or
ridge, about 3/4 mile from camp. A fairly
good morning, though partly clouded. Occupied all
morning with observations & got a lot. obsn.
at noon, before returning to camp. A fine outlook
to north of East & west bearings, over rolling irregular
green thickly-wooded plateau, which rises to higher
hills & ridges to NW & N. Several little lakes
among the dark timber, looking as if Bona.
Remarked 'like stars'. See a good deal of unstratified
granite in all directions & altogether outlook rather
Satisfactory. Rem. struck camp & worked on along
trail some miles. Trail pretty rough from fallen
timber & rocky in places. Remaining along & gradually
descending ridge of which we have been on culminating
point. Several deer seen today & one or two shot at
but without luck. A pair 'fool hens' Kerched down
with sticks, along the route. Somewhat disturbed
in camp last night by some animal prowling
round & breaking sticks in the dense woods where
we were. Supposed to be a grizzly as these fellows
plentiful about here.

Indian Medicines. Find that the Parnassia
reputed as good medicine for deer hunters.
The plant to be put in the hat or rubbed on it
& under the feet, when one is sure to see &
obtain the deer. The rottyga rattlesnake
likewise worn in the hat cures or prevents
headache.

Ind.

"Spiritualistic manifestations" Indians aver
that unknown beings sometimes throw stones
at them, particularly at night, when stones
may be noticed falling into the fire.

Stacy ga Kauloops Indian, lay since dead,
who saw some white object chasing him, at night.
Drew back from trail & fired an arrow at it
as it passed. In the morning returned &
found his arrow buried in a human skull bone

Sept. 14. Sunday, Travelled on along trail,
descending from ridge & getting into important
valley, probably that of Deep Cr., which followed.
Going pretty rough in places. Camped at 10 P.M.
& remained in camp during P.M. Day fine
& quite warm, but smoky.

Sept. 15. One of horses astray this morning &
did not get away till 9 A.M. Travelled on to lake
& then northward along border of lake, camping
nearly opposite the Mission. Stopped for lunch in
time to get obs. for lat. at noon. A fine day &
quite warm. Saw, & M.E. killed, a Vulturine
with 7 pellets on trail today. Air slightly smoky
& calm making this fine lake look even larger
& more striking than usual. It is a most
picturesque sheet of water & the low cultivable area
about the mission is most attractive looking, fully
confirming the pleasant recollection yet resulting
from visit in 1877.

Sept. 16. Travelled on northward along W. side
Okavoyan L., lunching at Bear's River, & camping
about 7 1/2 m. beyond it. Fine day, with southerly

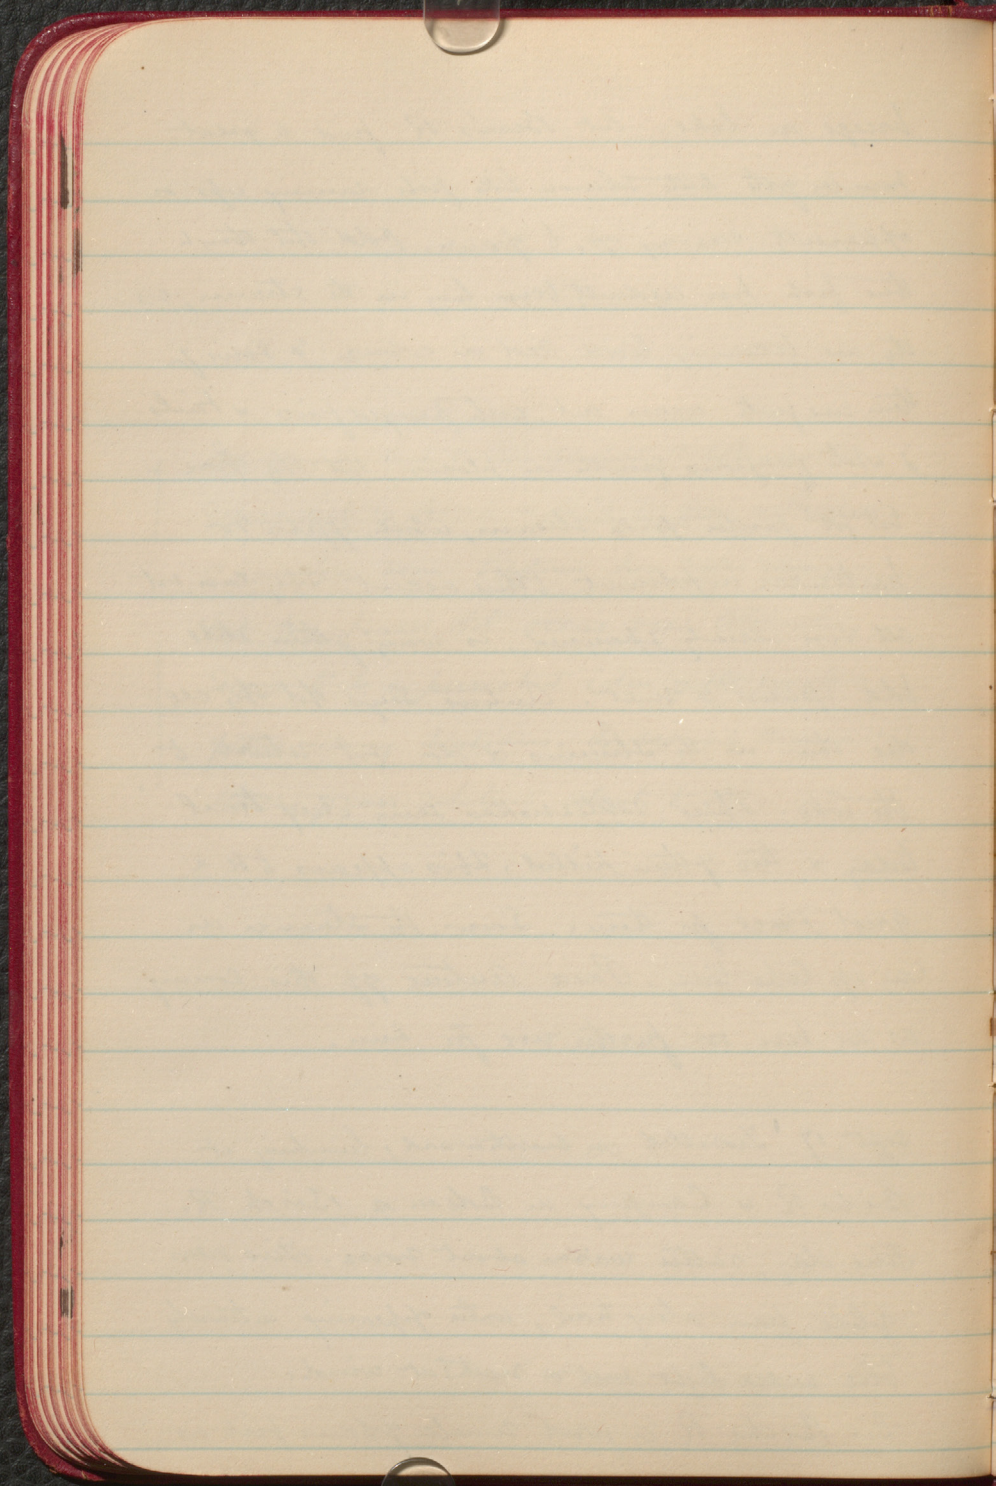

Ind.

Double-headed or two-headed rattlesnake
referred to by Bona & said by him & Prosper
to have been seen. Antoine has never seen,
but has heard that occurs near Coldwater.
Seems to be a persistent idea of the existence
of these among Indians. To see one means
that one of your relatives about to die.

breeds in lake. At Bear's R find a great number of the little salmon like fish running up or apparently running up, to spawn. Odd that though these fish have evidently been long in the stream, as they are becoming livid red in color & some of them are quite worn out, with frayed fins & tails & white fungous growth in places, that they have not got further up the stream, which offers no particular impediment to their ascent. They can not all have already spawned, as many of them still hold spawn & milt. Antone says that they all die thus in the streams & do not return to the lake. Three rattlesnakes seen along trail today & two of them killed. This appears to be a great place for them. Saw the stream on way up lake today. Paid Antone off this evening as we have no further use for him.

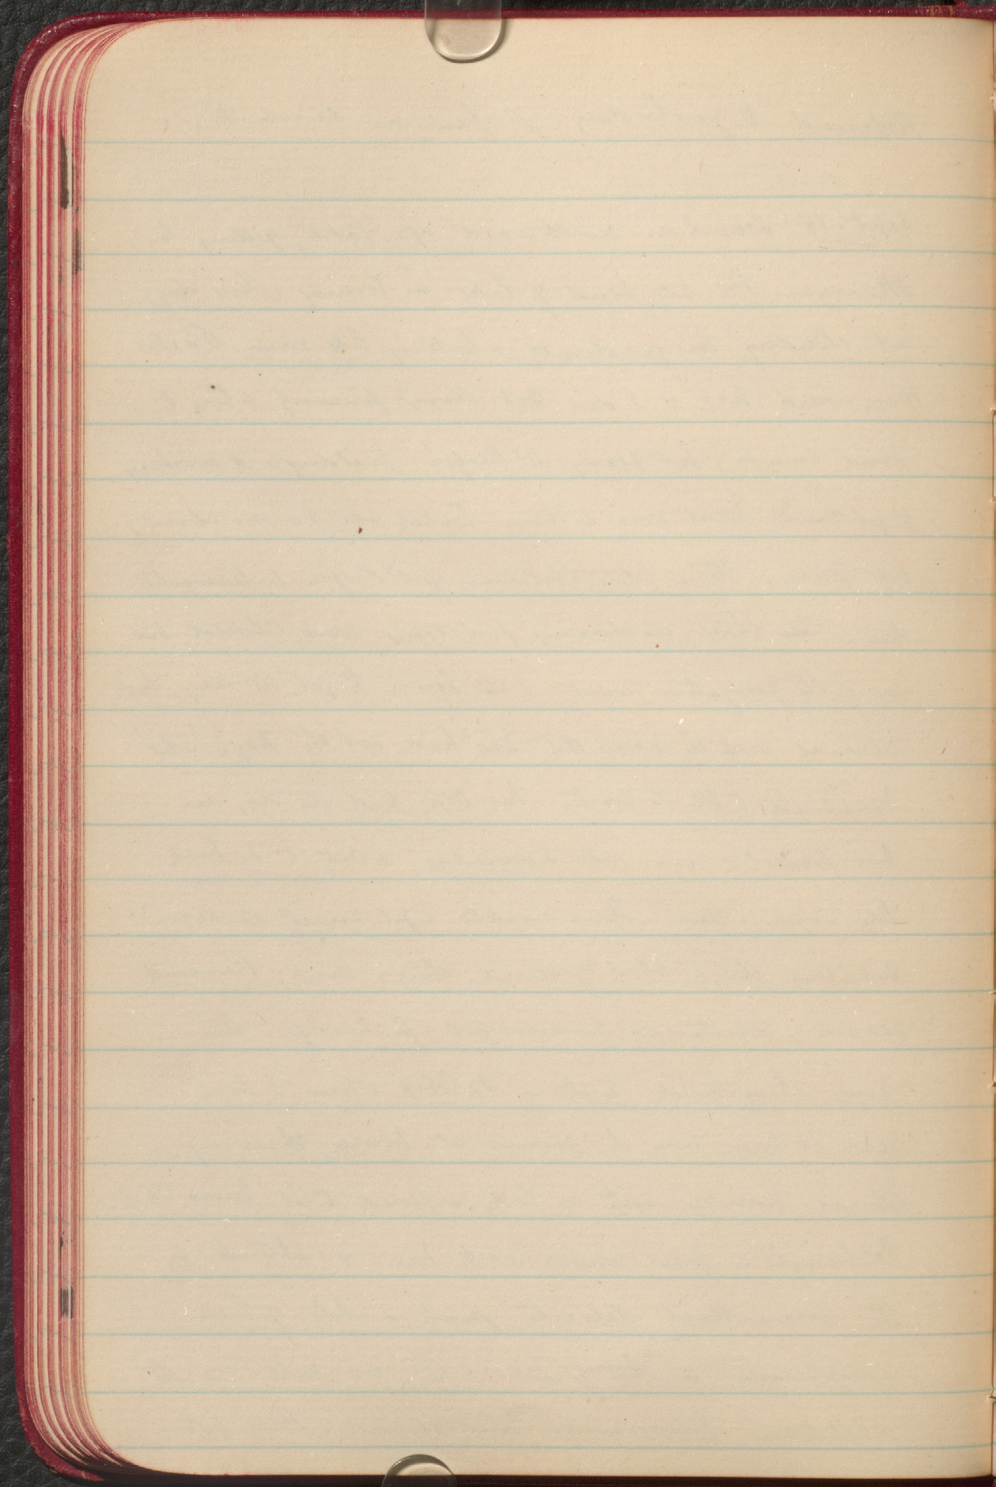

Sept. 17. Traveled on northward, lunching at Biche R & camping on Adlem or Birch R. Fine day, rather warm about noon. Fine views of lake from along trail, water appearing intensely blue under light south or north east wind.

In Biche R a good number of same fish as

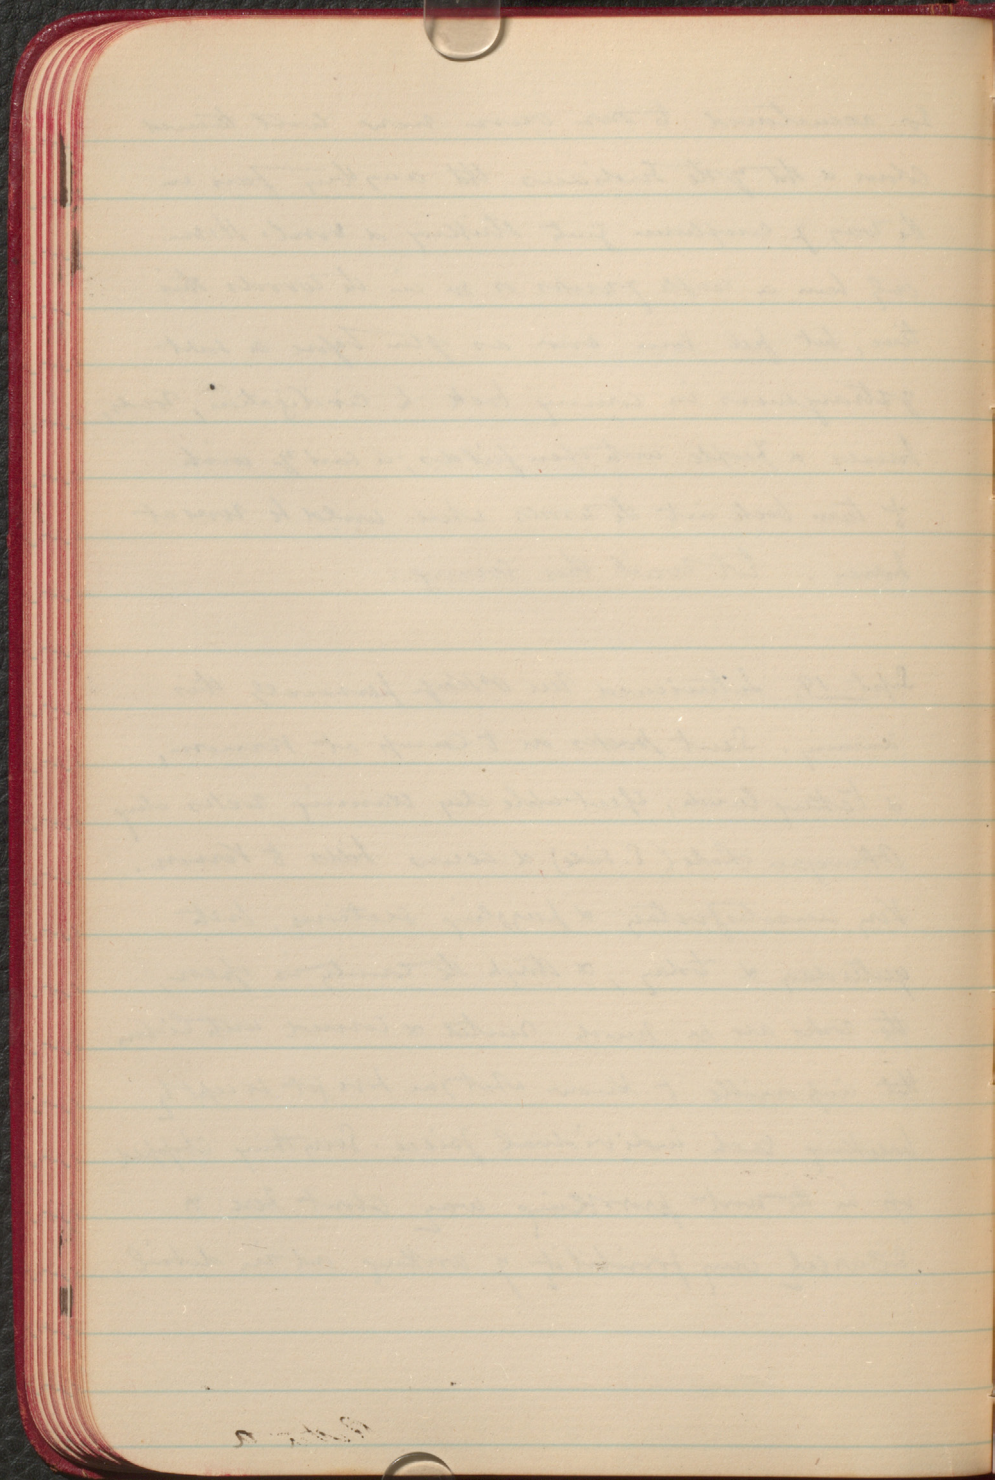

referred to yesterday. a few on Birch R.

Sept. 18. Travel on northward up Lake, getting to Okauchan P.O. at head of lake in evening. Fine day, but clouding on gradually & looking like rain. Parks being ahead M.E. & I did not know precisely where to find camp, but seeing O'Keefe's buildings & wishing to get mail went over to them. Could see no one about, but finding three little children of O'Keefe's interrogated them. The store, including post office was closed, but one of the youngsters went to the house to get the key, but returned with the news that 'she' had not the key. 'She' I supposed to be the woman. Mr. O.K. had the key in his pocket & was out somewhere & not to be back till supper-time. Thus unable to get mail or any supplies though short of several things, etc. Reversed search, eventually successful, for camp. In going along road met a Dr. Chip whom I had seen at some time it seems, at Niwota, driving toward venison with a lady supposed to be Miss Chip. Exchanged a few words with him & struck by the remarkably delicate pink & white of his complexion & that of Miss C, as well as the children proceeding interviewed. Here got

So accustomed to our own new well tanned
color & that of the Indians that anything fair in
the way of complexion quite striking & novel. Have
only been a couple weeks or so in the woods this
time, but feel even now as often before a sort
of strangeness in coming back to civilization, roads,
houses & people with open fields; a sort of wish
to turn back into the woods where would be more at
home. Eat well this evening.

Sept. 19. Interviewed Mr. O'Keef personally this
morning. Sent packs on to Camp at Vernon,
& taking lunch, spent whole day examining rocks along
Okangam Lake (E. side) & across hills to Vernon.
Very unsatisfactory & puzzling sections, both
yesterday & today, & though the country is open,
the rocks are so much riddled & covered with lichen
that impossible to know what you have got except by
breaking each individual piece. Everything chopped
up in the most provoking way about here so
scarcely any possibility of working out in detail.

5/16

Sept. 20. all day camped near Vernon,
getting supplies, information etc. Writing letters
& so on. Met Frank Barnard in town &
Mr Dewdney, the Ed. Commissioner. Also
called on in camp by a fine old man S.
Girouard, who has been 89 years settled in
this valley. Remembers my camping here when
I passed through in 77 & seems to regard me
in the light of an old friend in consequence.
Had a long talk with him & got a good deal
of useful information about routes through the country.
Allowed us to put our horses in one of his
fields, presented me with a bottle of preserved
Crest apples & altogether seemed as if could not
do too much for us. A beautiful day & quite warm.

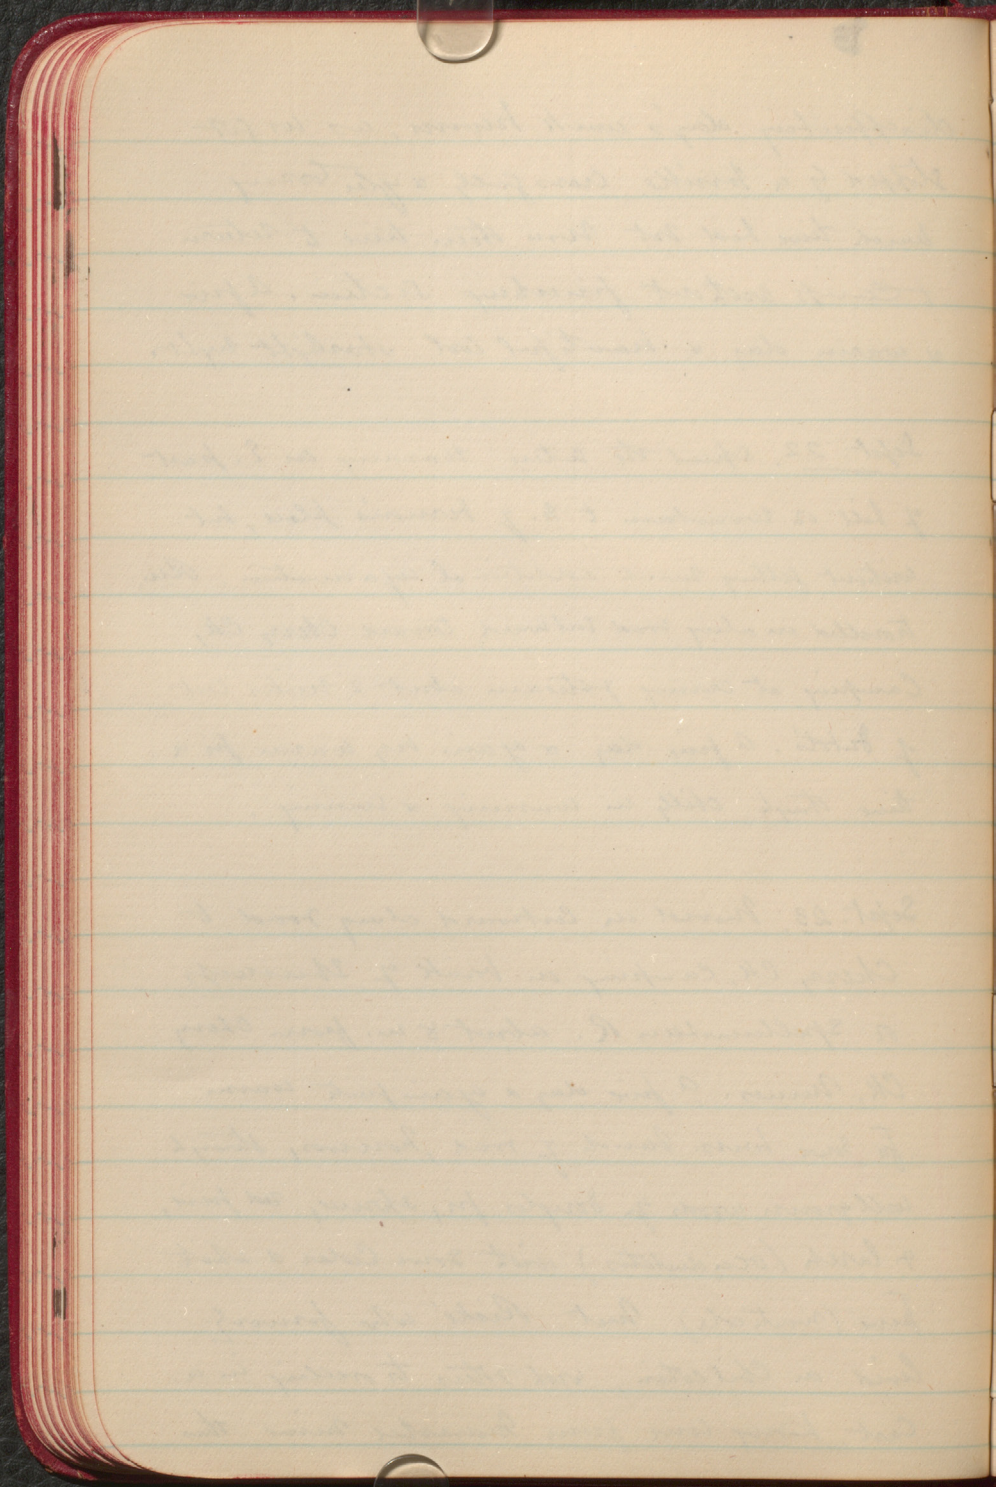

Sept. 31. Left camp at Vernon this am. &
moved on along Cherry Ck. road to Vernon's
ranch - Coldstream. Found Mr Wood, in
charge, very obliging, he permitting us to camp
in one of his fields & turn our horses out in it.
Ran road back on open grassy mountain
to north, where, since visit in 77, have supposed
good section might be obtained. Roster a

Inus.

disappointing day's work however, as we got
stopped by a barrikade across fall & after losing
much time had not more than time to return
to camp without finishing section. A fine
& warm day & beautiful cool starlight night.

Sept. 22. Spent the entire morning on E. part
of hill or mountain to N. of Herman's place, but
without getting much additional information. Then
traveled on along road southward toward Cherry Ck.,
camping at crossing of stream about 2 miles east
of Dubot's. A fine day & again very warm for a
time though chilly in morning & evening.

Sept. 23. Moved on eastward along road to
Cherry Ck., camping on bank of Shuswap
or Spallumcheen R. about 8 m. from Cherry
Ck. Mines. A fine day & again quite warm
for some hours. Much of road, however, through
well grown woods of Douglas fir, spruce, red pine,
& larch (*occidentalis*) with some Cedar & white
Pine (*monticola*). Met Riske who formerly
lived on Chilcotin, with others traveling in a
cart, having come from Monashee mine this

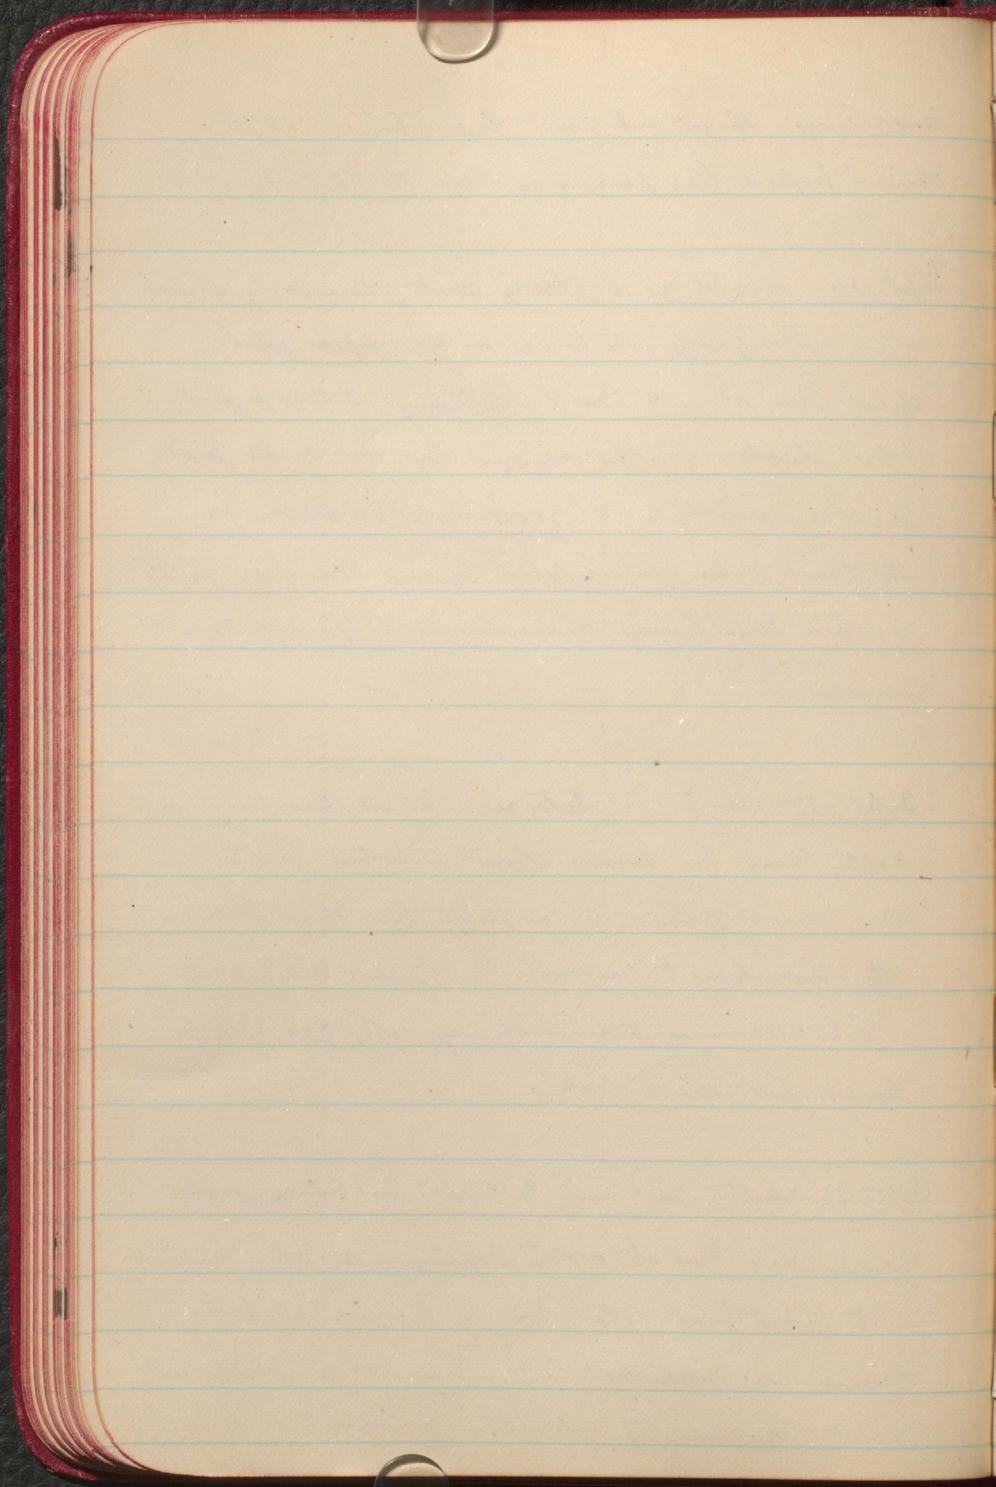

Morning. Have not seen him since 1875
when I passed his place going up the Chilcatin.

Sept. 24. Moved on to Cherry Creek, camping about
half a mile from the Creek on the upper flat.
Spent P.M. along the Creek, returning to camp just
before dark. Another very fine day, but rather smoky.
Met an intelligent & eloquent Chinaman on
the Creek, who remembered seeing me here in 77
& has been living & mining here himself ever
since.

Sept. 25 - on to Mr. Sutyre's mine, camping in
valley near his houses about watershed between
one branch of Cherry Ck & Kettle R. Spent P.M. on
the mountain to eastward (Monashee Mt.) with
Mr. S. examining various openings etc. got back to
camp just about dark.

Sept. 26. started early with Mr. Sutyre & after
spending some time at another opening on Mt., pushed
on to highest point of the block of irregular plateau
known as Monashee Mt. Examined a photos. with
general examination of country. & description by Mr. S.

also has prospected & run over most of the mountains
in sight. Air somewhat smoky, but on the whole
got a very satisfactory outlook to northward of E.W.

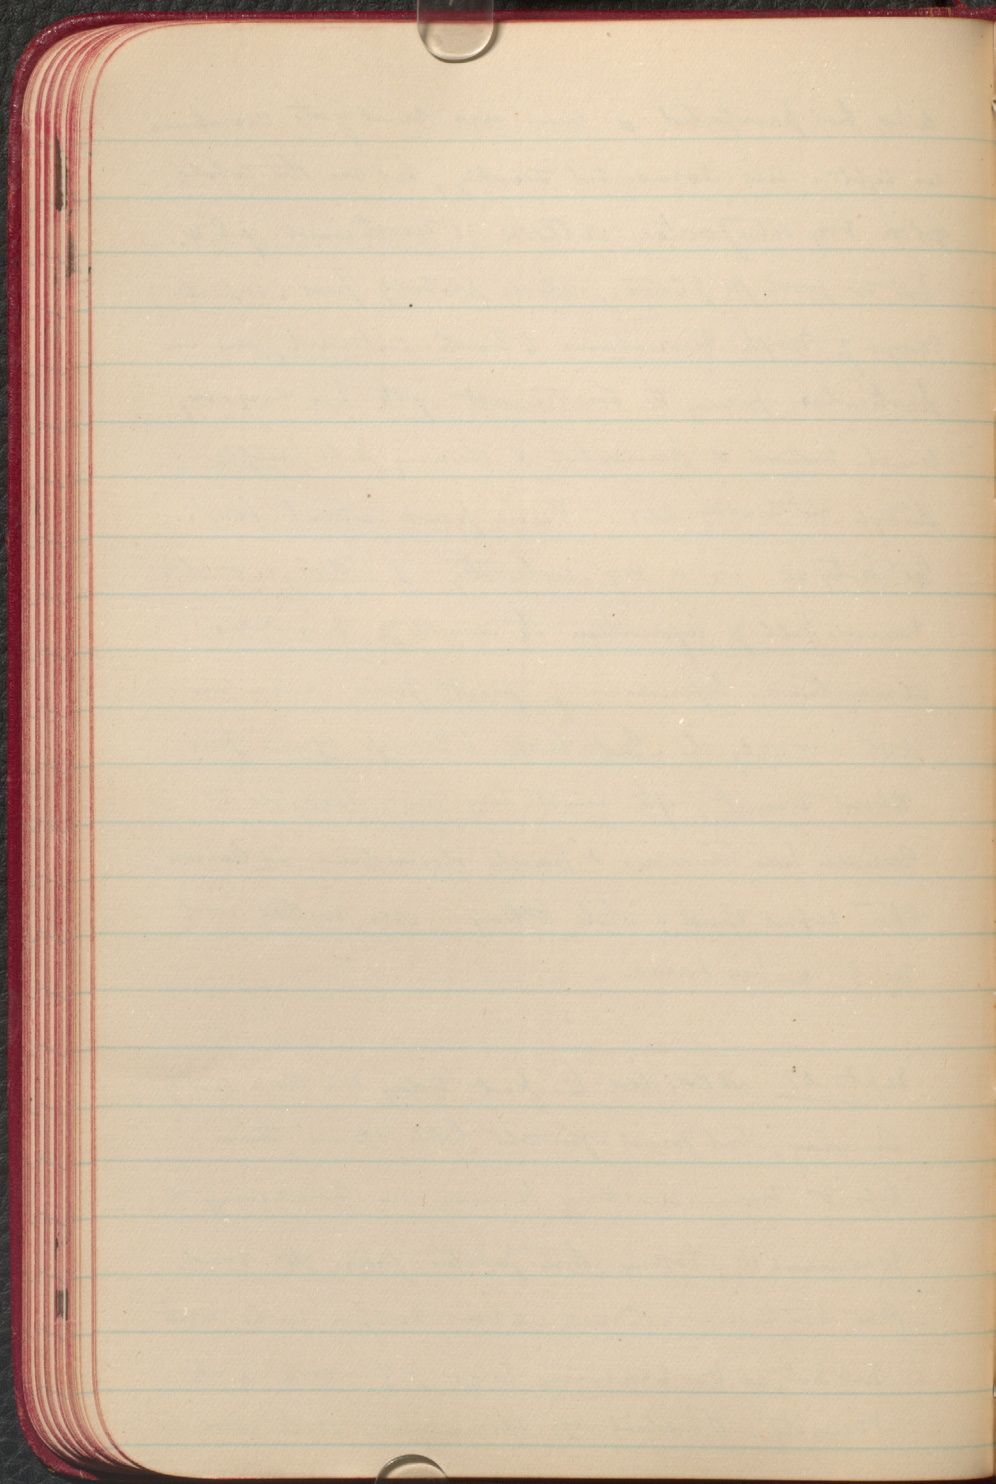

Not so good for photos., which probably from. Superb
range of rough mountains to north-eastward, one in
particular, forming the southernmost of the high range very
much broken & pinnacled & showing pale purple
through the smoky air. View just about good.

Mr. Sully is a very intelligent & intelligent old
man, full of information the result of his own
observations. References of forest fires, adventures
with a grizzly elk. Got back to camp again just
about sunset, after another long day. Decide to
remain here tomorrow & finish observations at leisure.
After supper spent a while talking over matters with
Mr. S. in his house.

Sept. 27. decided to rest today in as a sort of
Sunday, but found after all little spare time.

Went to main working tunnel in morning &
examined it, taking three photos. from the road.

Then walked southward about half a mile with
Mr. Sully to examine edge of granite & its
vicinity. Packed up specimens, attached to

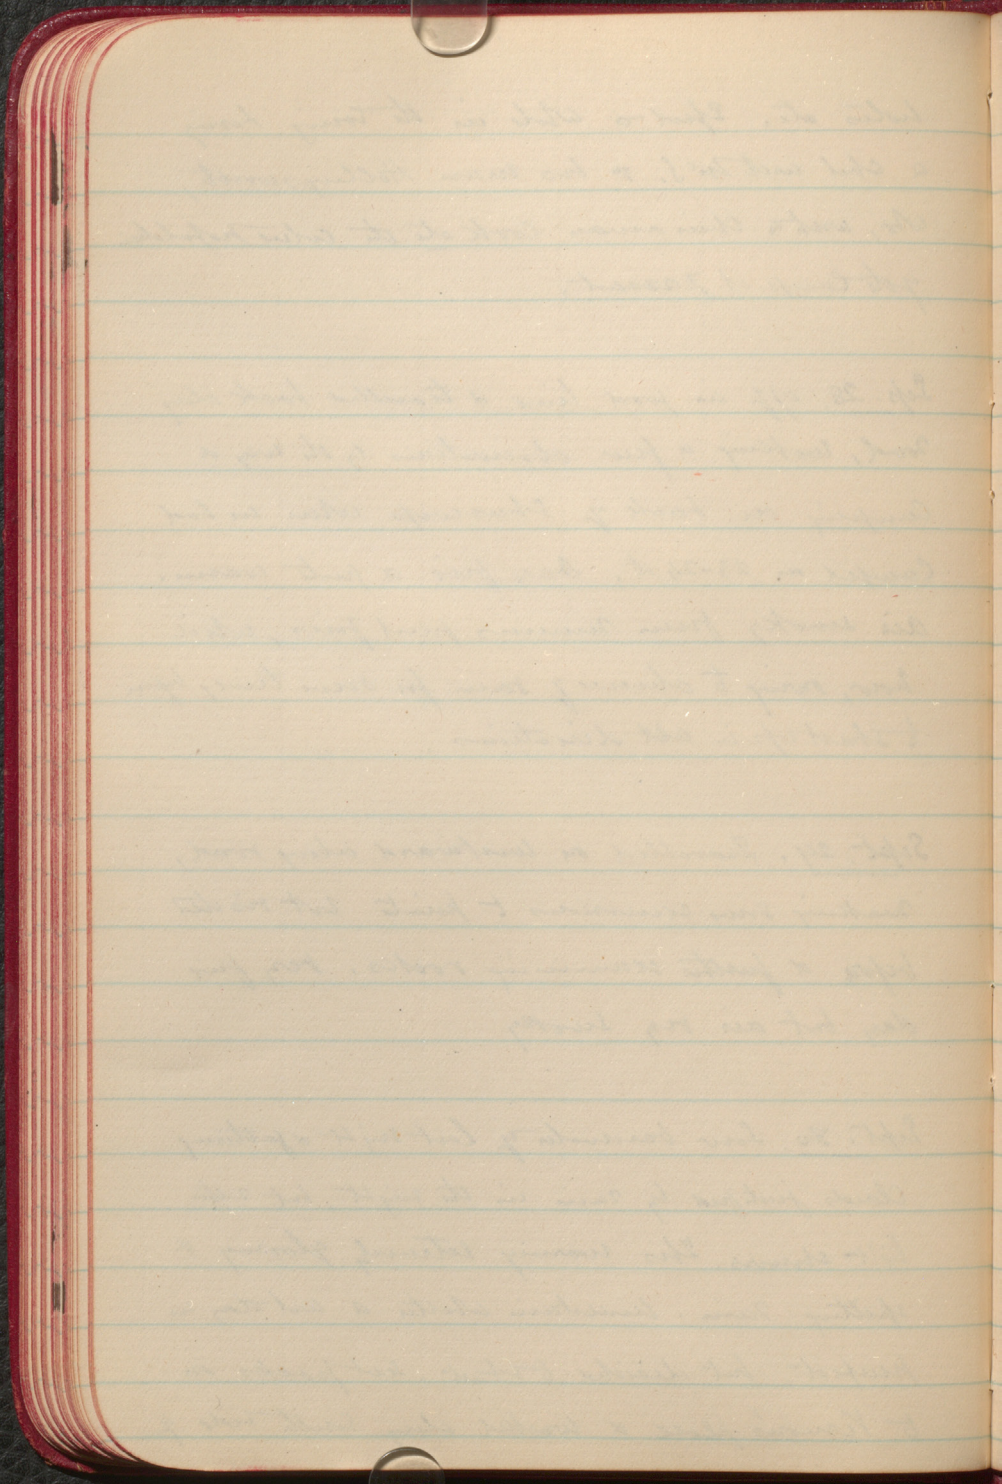

notes etc. Spent a while in the evening having
a chat with Mr. S. & his man Hollingsworth,
Mr. with a Chinaman cook etc the entire population
of the Camp at present.

Sept. 28. Off in good time & travelled back along
road, making a few observations by the way &
Camping on bank of Sherwops when in boat
Camped on 23-24th. Day fine & quite warm.
Air smoky from numerous forest fires, which
now, owing to absence of rain for some time, begin
to start up in all directions.

Sept. 29. Travelled on westward along road,
making some excursions to points not visited
before & further examining rocks. Very fine
day but air very smoky

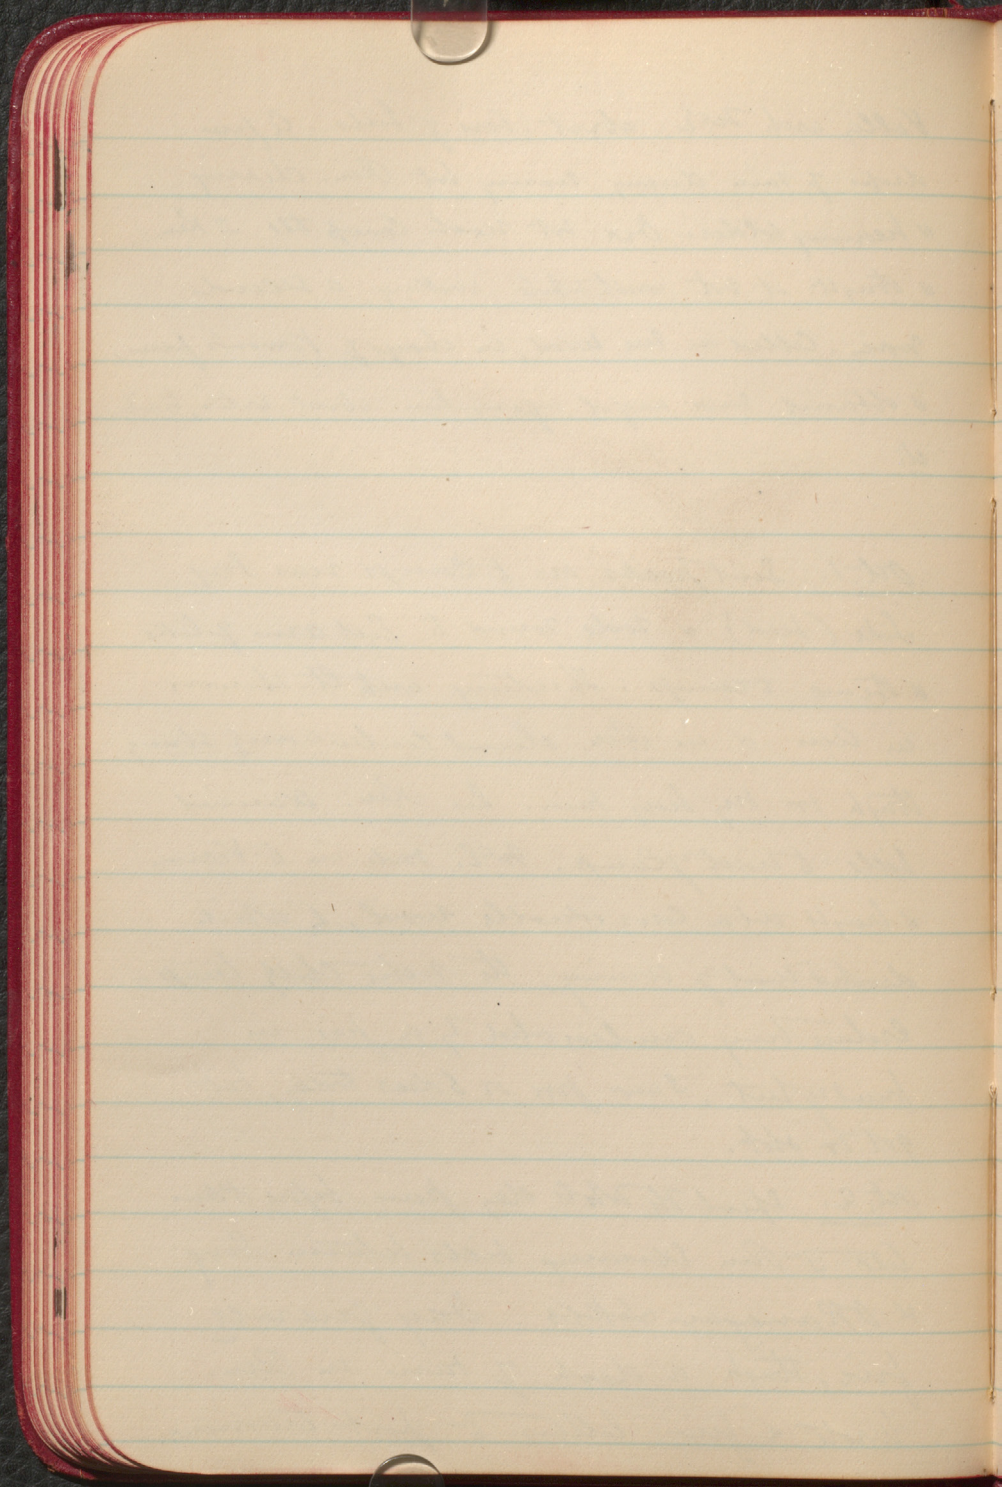

Sept. 30. Low barometer of last night & gathering
clouds justified by rain in the night, but rather
light showers. This morning extremely gloomy &
spitting rain. Uncertain whether a wet day is
prospected, but decided to start. Set packs on
to Vernon's place & worked along south side of

Vally with M.E. about base of hills. A few drops of rain during morning but Pen. clearing & becoming colder. Did not reach Camp till 2 P.M. & stayed it but went while making a second move. Called on the wood, in charge of Kowon's farm, & obtained some useful information about water, trails etc.

Oct. 1. Sent packs on to Camp near Song Lake (head) & rode round to East arm of lake & thence to camp. Threatening with lt. showers in Am. & in Pen. cleared tent & made stony, though on very heavy rain. In Pen. examined hills to north of camp. M.E. rode in to Veron & brought out a considerable wood, & which devoted most of morning, the rather chilly temperature being ameliorated by a fire in front of tent. Saw five or 6 deer today, but got no shot.

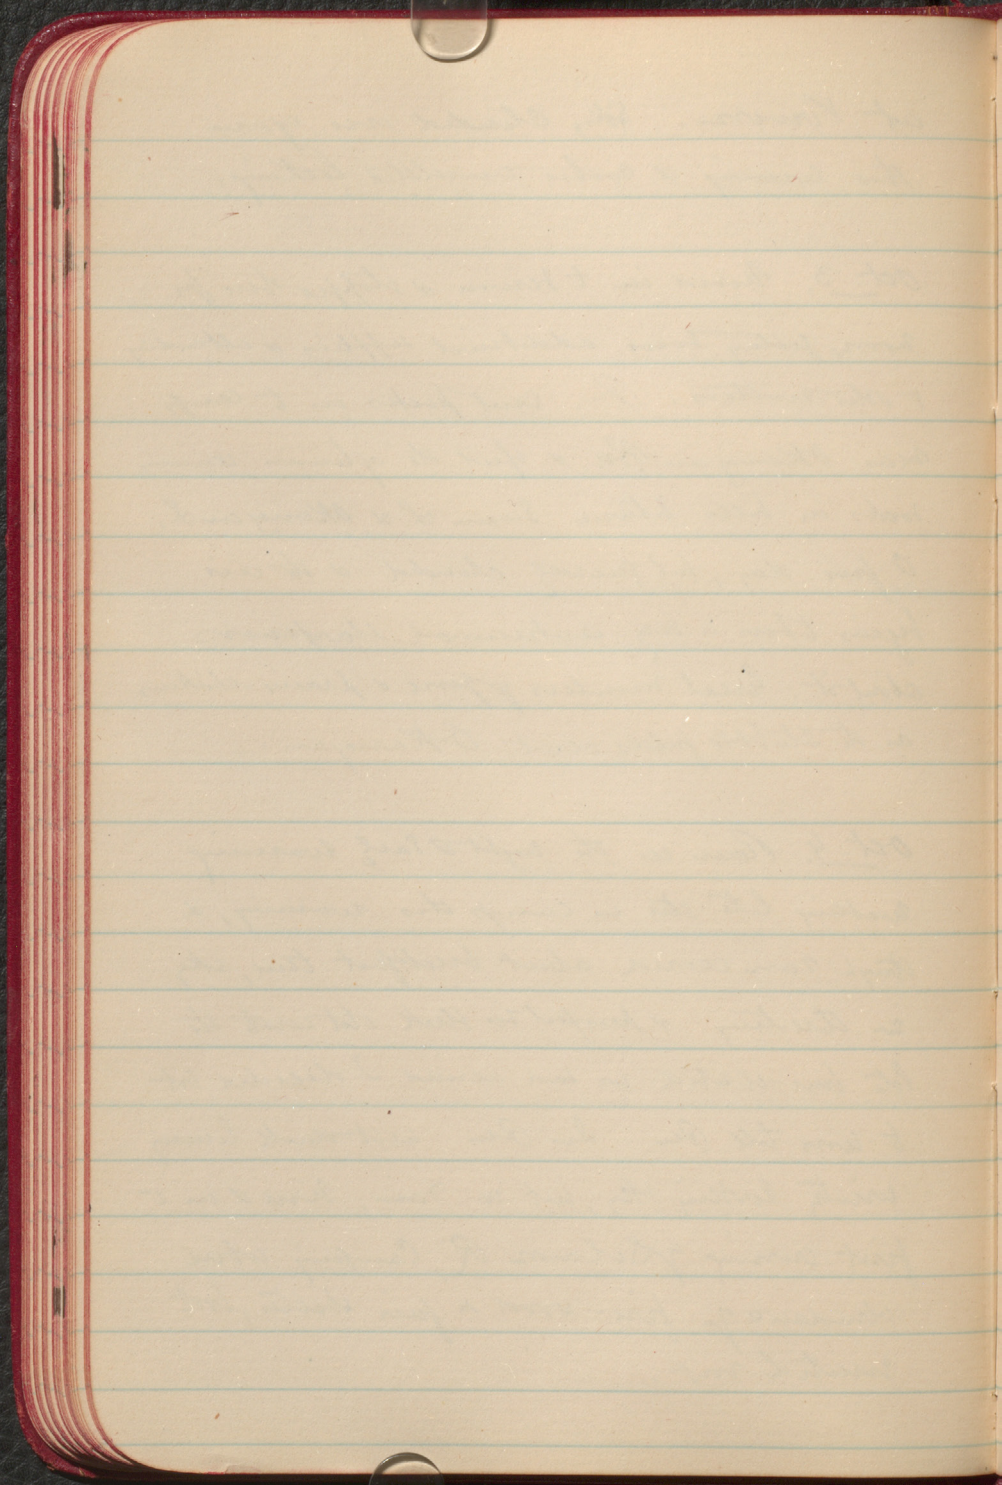

Oct. 2. Spent the whole day from before 8 am till 5 P.M. Examining hills between Song & Okanagan Lakes. Day generally fine, though a dash of rain in Pen. Wrote a few letters to post tomorrow

at Vernon. Sky clouded over again
this evening & rather unsettled looking.

Oct. 3. Word in to Vernon & stopped there for
noon, getting some additional supplies & attending
to other matters. Ben. sent packs on to camp
near Okanagan P.O. & spent the afternoon examining
rocks on hills between Swain L & Okanagan L.
A fine day, but gradually clouded & the air
begins to have a very autumnal sharpness
about it. Great numbers of juncos & prairie-chickens
on the stubble fields about Okanagan.

Oct. 4. Rain in the night & early morning
making late start in camp this morning, &
though rain ceased about breakfast time, sky
so threatening & prospect so bleak that with the
late hour at which we had arrived I decided not
to move till Ben. In Ben. with dark evening
windy looking sky, but no rain, word on to
first crossing of Selkirk R, camping where
abundance of fire-wood & fair shelter, both
essential now.

Oct. 5. Heavy rain in the night, but
about sunrise appearance of clearing & day
fine throughout, though severely clouded. Moved
on westward as far as Grande Prairie.

Oct. 6. Another wet stormy night & heavy rain
in morning. Decided not to move camp at
any rate till Riv. as weather very bad looking
& begin to think that the loss of time entailed by
such weather as we have been getting scarcely
justifies keeping in the field, particularly in view
of other engagements. Spent some time looking at
rocks near camp & eventually decided to take the
road for Kamloops, abandoning for the present further
travels toward head of Salmon R., & particularly the
route blocked out to Chapman & thence northward
to Kamloops. Riv. windy & stormy, but moving
camp some miles toward Duck's. Weather this
morning shows no sign of improvement, & snow
is getting down on the hills when occasional
glimpses of them can be got. Feel a certain regret
in closing work while so much remains to be
done, but not without some satisfaction in
knowing that the incumbrances & roughness of

Indians believe that burning wood
from a tree struck by lightning brings
on cold weather, evidently a deduction
from the cold following thunder storm.

Ind.

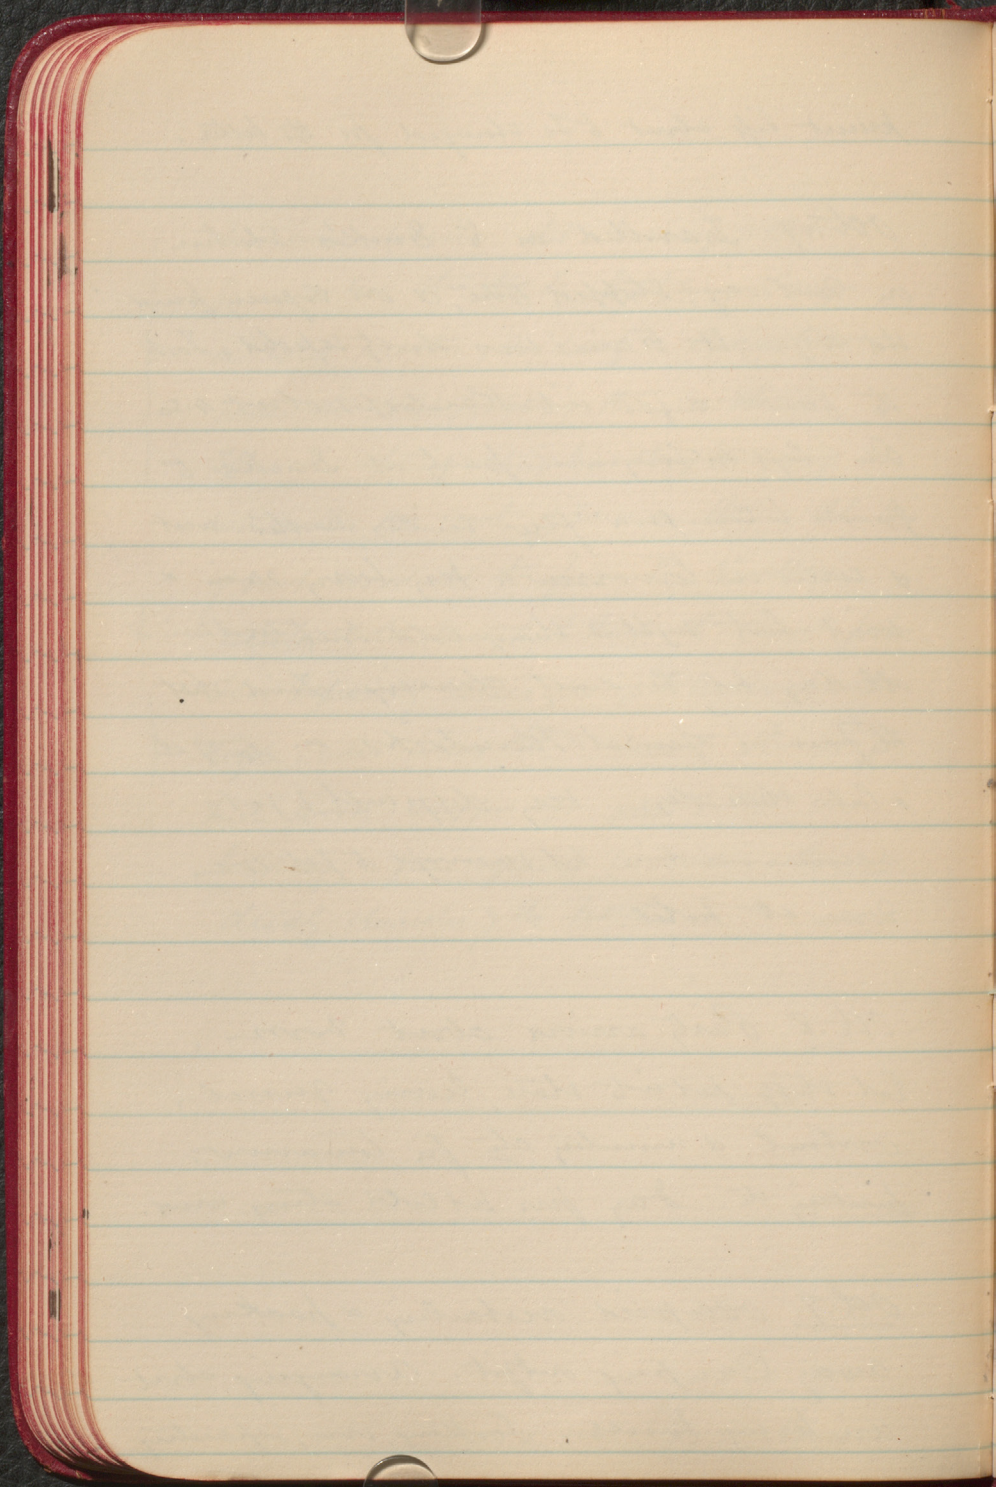

Thus in spring when travelling among
mountains over a crust of snow throw splinters
of such wood on the fire to melt
weather cold enough to keep the crust firm.
This especially desirable if travelling with
dogs. Also believe that a small splinter of
such wood wrapped up with bullet in
loading a gun greatly increases the
deadly character of the bullet.

present life about to be changed for the better.

Oct. 7. Travelled on to Duck's Station on railway, stopped there, & on enquiry found that a freight train was shortly expected. Took the freight & got into Kamloops about 4.30 P.M. Left McEwen with party at Duck's to go on to camp a few miles further west & come in tomorrow. Very heavy rain & wind last night & strong cold north west wind all day but gradually clearing. Found that the Fair is to open at Kamloops on the 9th & last three days. Very difficult to get accommodation, but managed to get one room at hotel.

Oct. 8. Party arrived about noon. Got stuff put into store, leaving general overhaul & wintering etc for tomorrow, wintering etc. Day fine but cold strong wind.

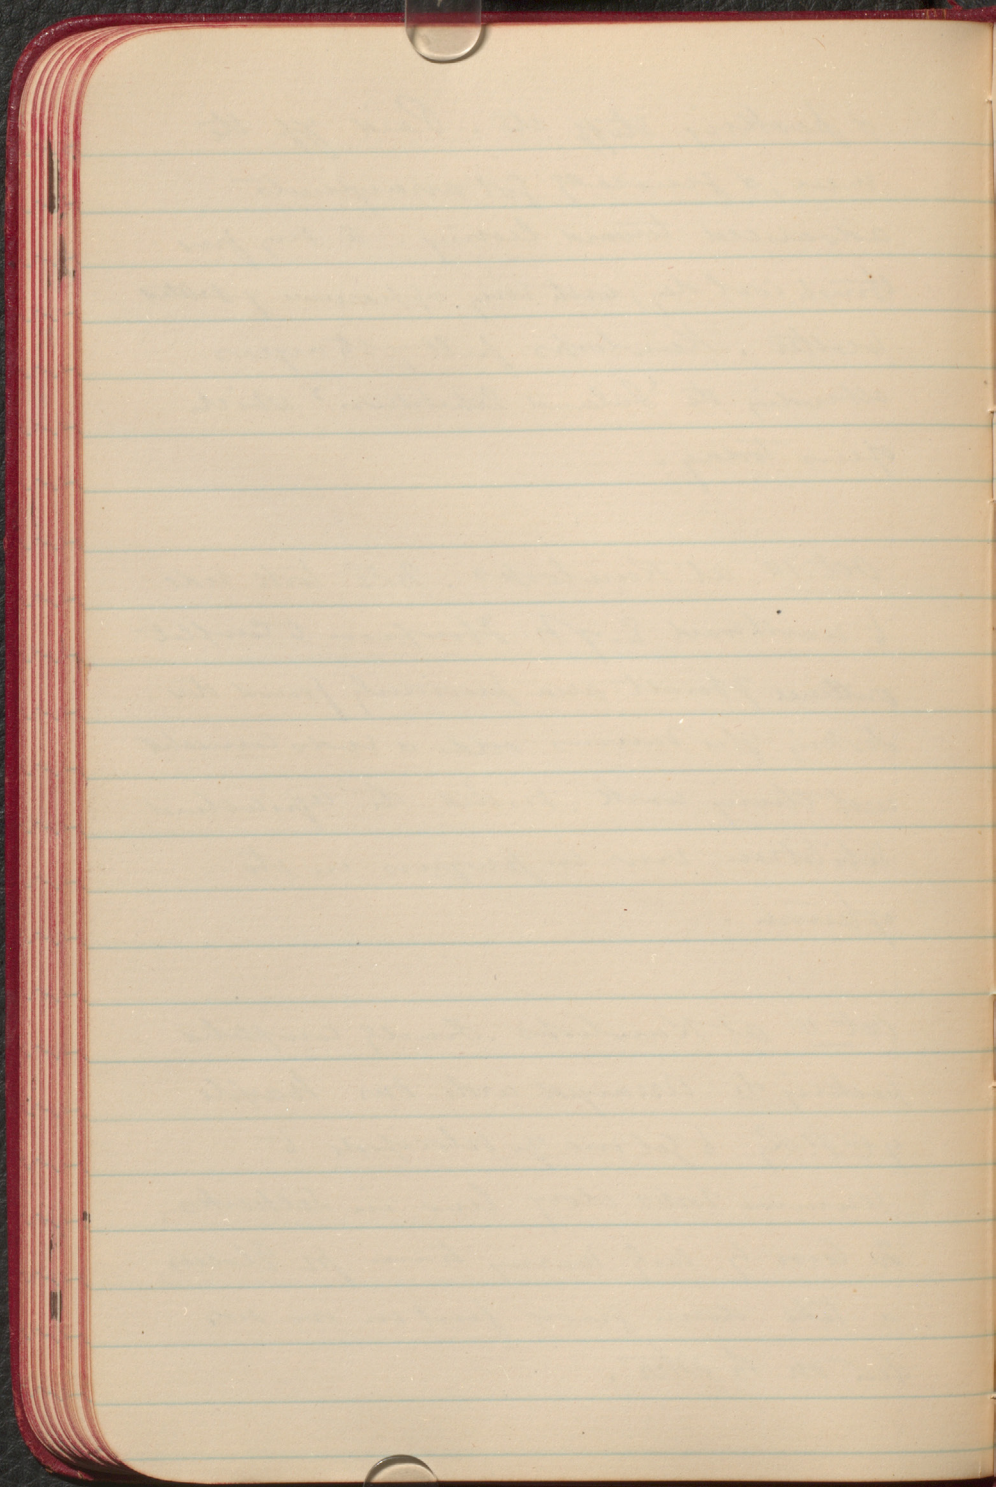

Oct. 9. occupied overhauling & packing away Camping outfit. Arranging about wintering horses. Looking over, separating

& packing stuff etc. Paid off the men, & generally got arrangements advanced toward leaving. A very fine though cool day, with very oppressive & settled weather. Keweenaw full of strangers attending the 'Island Exhibition' which opens today.

Oct. 10. at Keweenaw. M.E. took ride to northward E. of N. Howsem to complete outlines of forest area previously found there. Working plus various odds & ends connected with clearing work. Visited the Agricultural Exhibition, now in progress in the afternoon.

Oct. 11. at Keweenaw. Finally completed packing & arranged with Mr. Harple of C.P.R. to get me & velocipede to examine routes along line in Selkirk. To leave by early morning train for Glacier, & take down grade just on the side then on the other.

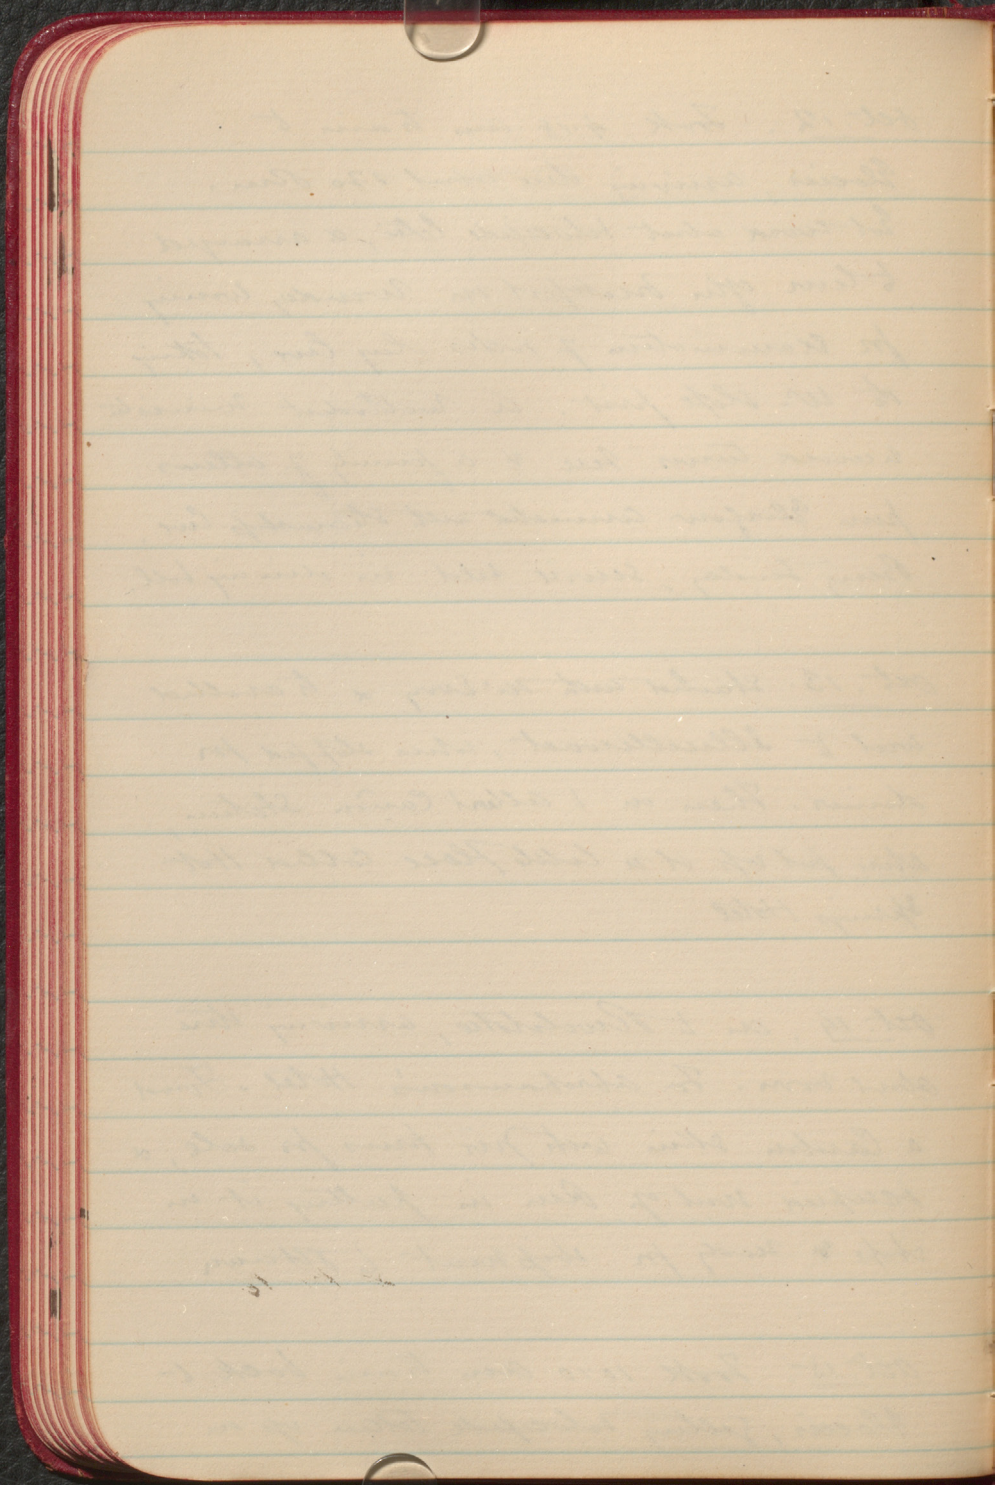

Oct. 12. Took 4:18 am train to
Gleocis, arriving there about 7:30 am.
Got word about velocipede later, & arranged
to leave after breakfast on Monday morning
for examination of rocks along river, taking
the W. slope first. A Methodist minister
arrived tomorrow here & a family of allens
from Glasgow arrived with steamship line.
Prayer Sunday, service held in dining hall.

Oct. 13. Started with Mr. Ewing & travelled
west to Illecillewaet, where stopped for
dinner. Then on to Albert Canon Station,
where put up at a little place called Hot
Springs Hotel

Oct. 14. on to Revelstoke, arriving there
about noon. To Abrahamson's Hotel. Found
a Carbon skin with pins for sale, &
occupied most of am in putting it in
shape & ready for shipment to Ottawa

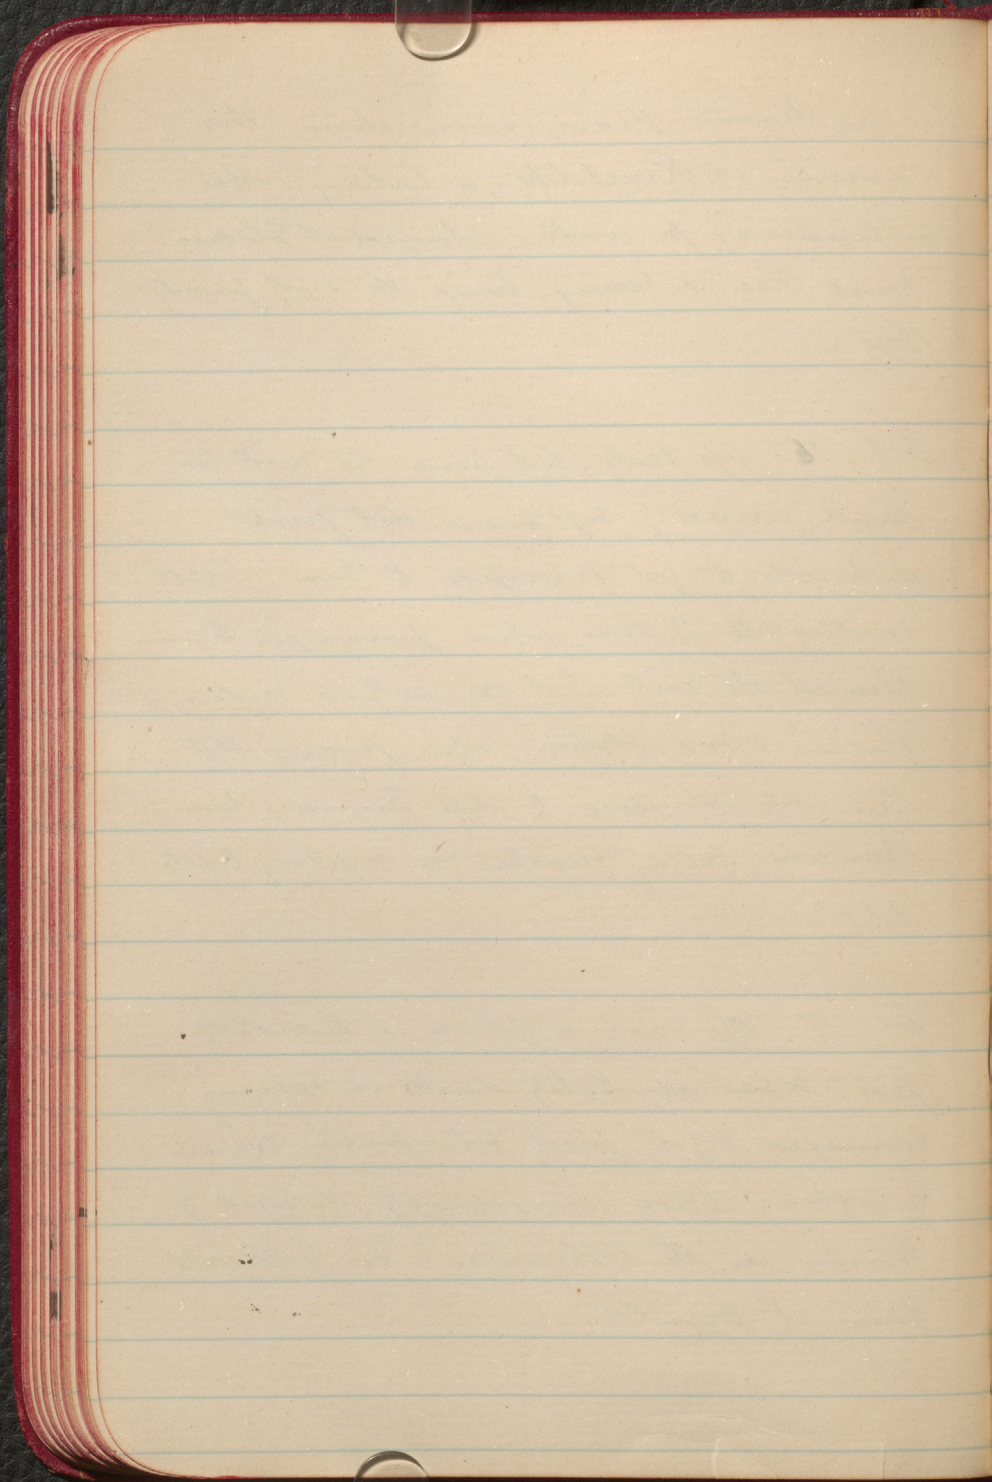

Oct. 15. Took 10:10 am train back to
Gleocis, getting velocipede taken up on

same train. Heavy snow storm this morning at Riverview & looking rather unpromising for work. Stayed at Glacier House Run & evening, being the only guests there.

Oct. 16. Up early, but found the rail so much covered by soft snow that quite impossible to get telegraphs to run. Kept waiting till 3 P.M., when passenger trains cleared the rail. Got on only 4 miles, to Rogers' Pass Station, when finding that there was no place to stop beyond, had to remain, getting quarters in a place called 'Hotel'.

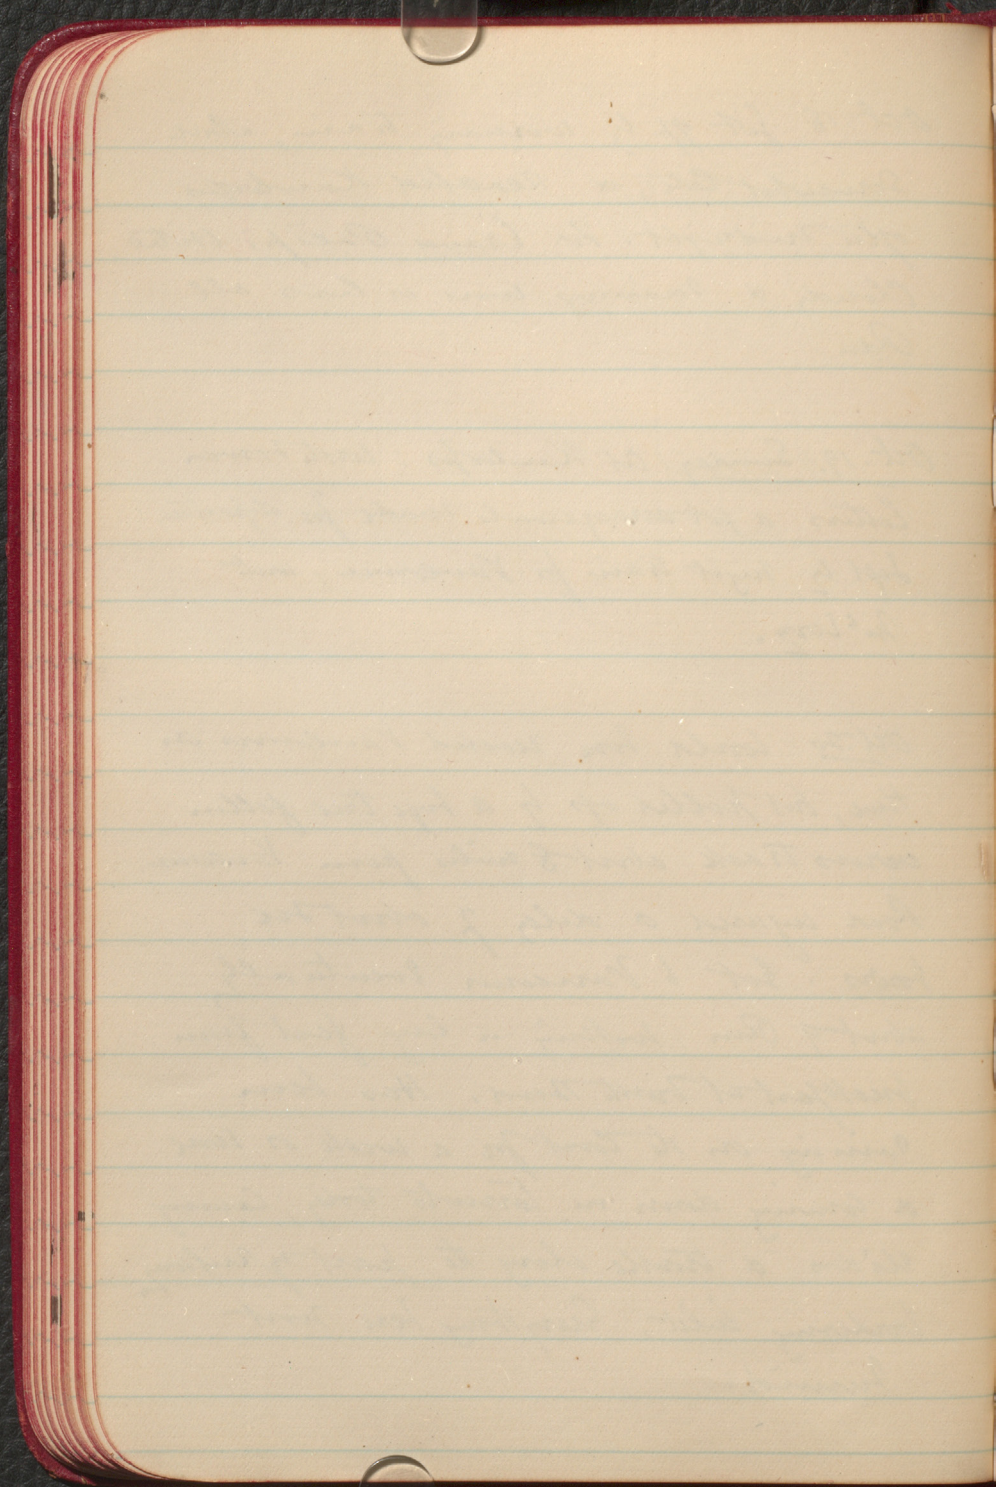

Oct. 17. Off early & got on to Donald just before absolutely dark in evening. Managed to get fairly satisfactory exam. of rocks, though considerably delayed by trains in the afternoon. For Selkirk's House at Donald.

Oct. 18. Set off by morning train, which
Sawcut Cuts, & Reached Kamloops
after midnight. For Grand Pacific Hotel.
Cloudy & raining was or less all
P.M.

Oct. 19, Sunday. At Kamloops. Wrote some
letters & got arrangements made for departure.
Left by night train for Vancouver, with
McEvoy.

Oct. 20. Would have reached Vancouver on
time, but pulled up by a large tree fallen
across track about 8 miles from Vancouver.
Road injured & delay of about six
hours. Got to Vancouver eventually,
about 9 P.M., making a long fast from
breakfast at North Bend. Has been
raining on the coast for a week or more
& coming down in torrents today, causing
slides & trouble along the part of railway
bordering inlet. Everything here wet
summit.

Oct. 21. Had proposed diverting day to
collecting fossil plants, but continued rain
prevented it unless to undertake the trip to
locality near Hastings. Called on Mrs Abbott
& others in town. Spent P.M. going over
Cares & caring at Kawaka Ck with
J.W. Vaughan. Despatched Mr. E. to Victoria
to endeavor to get some information for map
from Surveyor General's Office. Prepare going
out myself tomorrow.

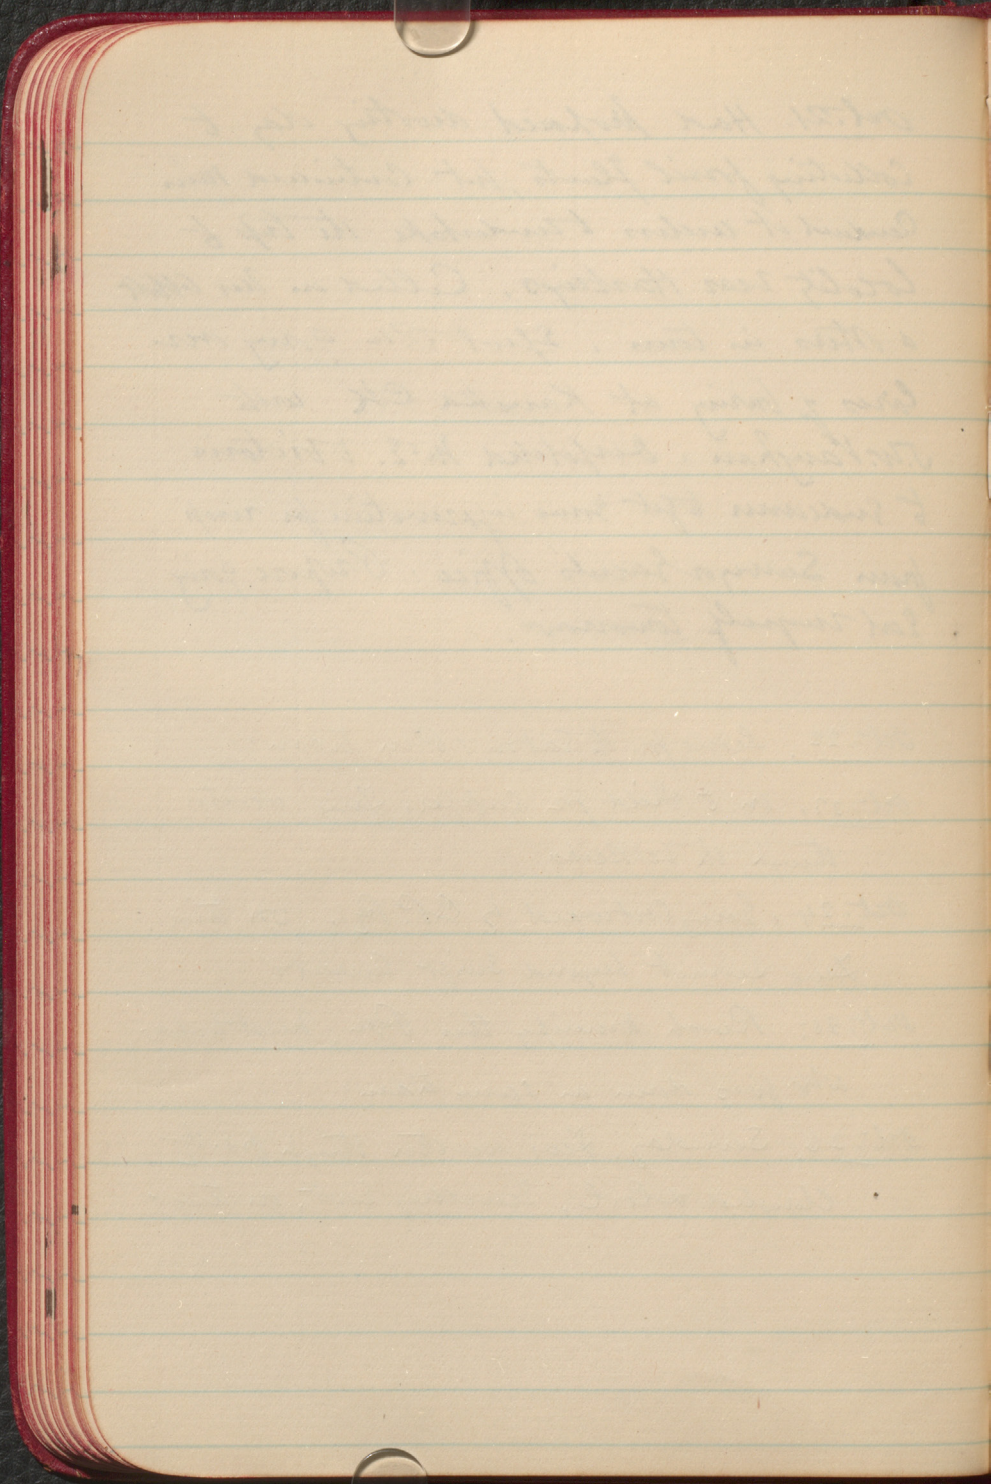

Oct. 22. Leave for the Sat on 1 P.M. train.

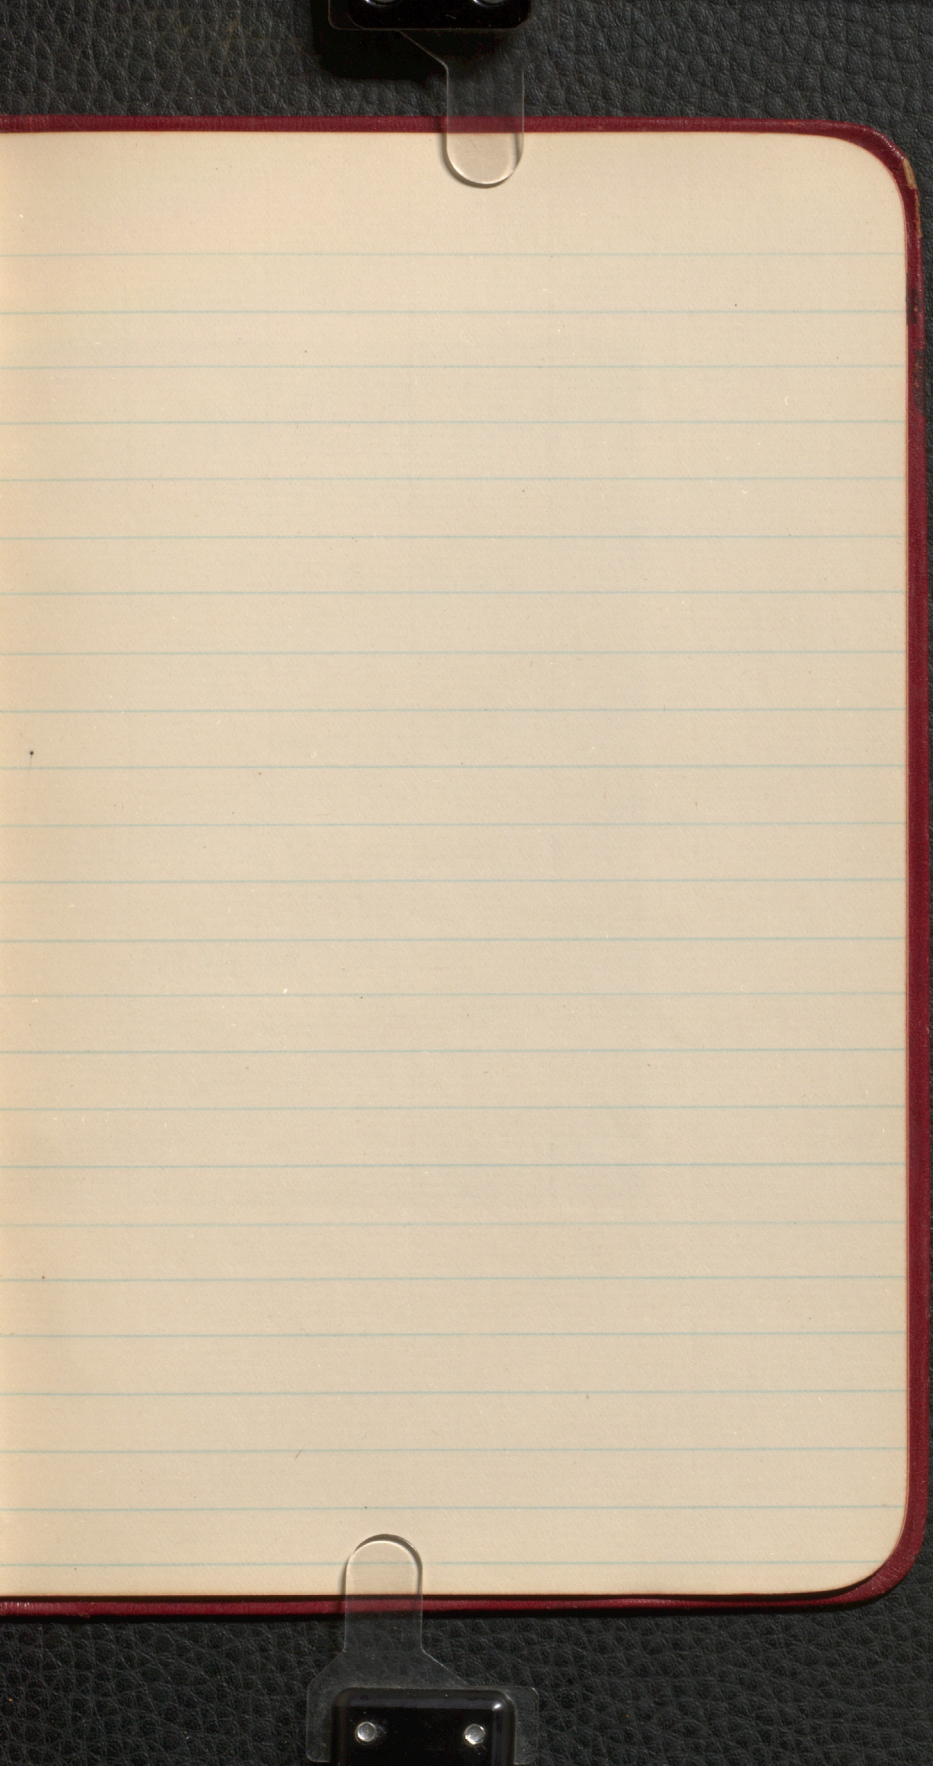

Oct. 23. on to Field for supper, Levi weathers
through the Selkicks

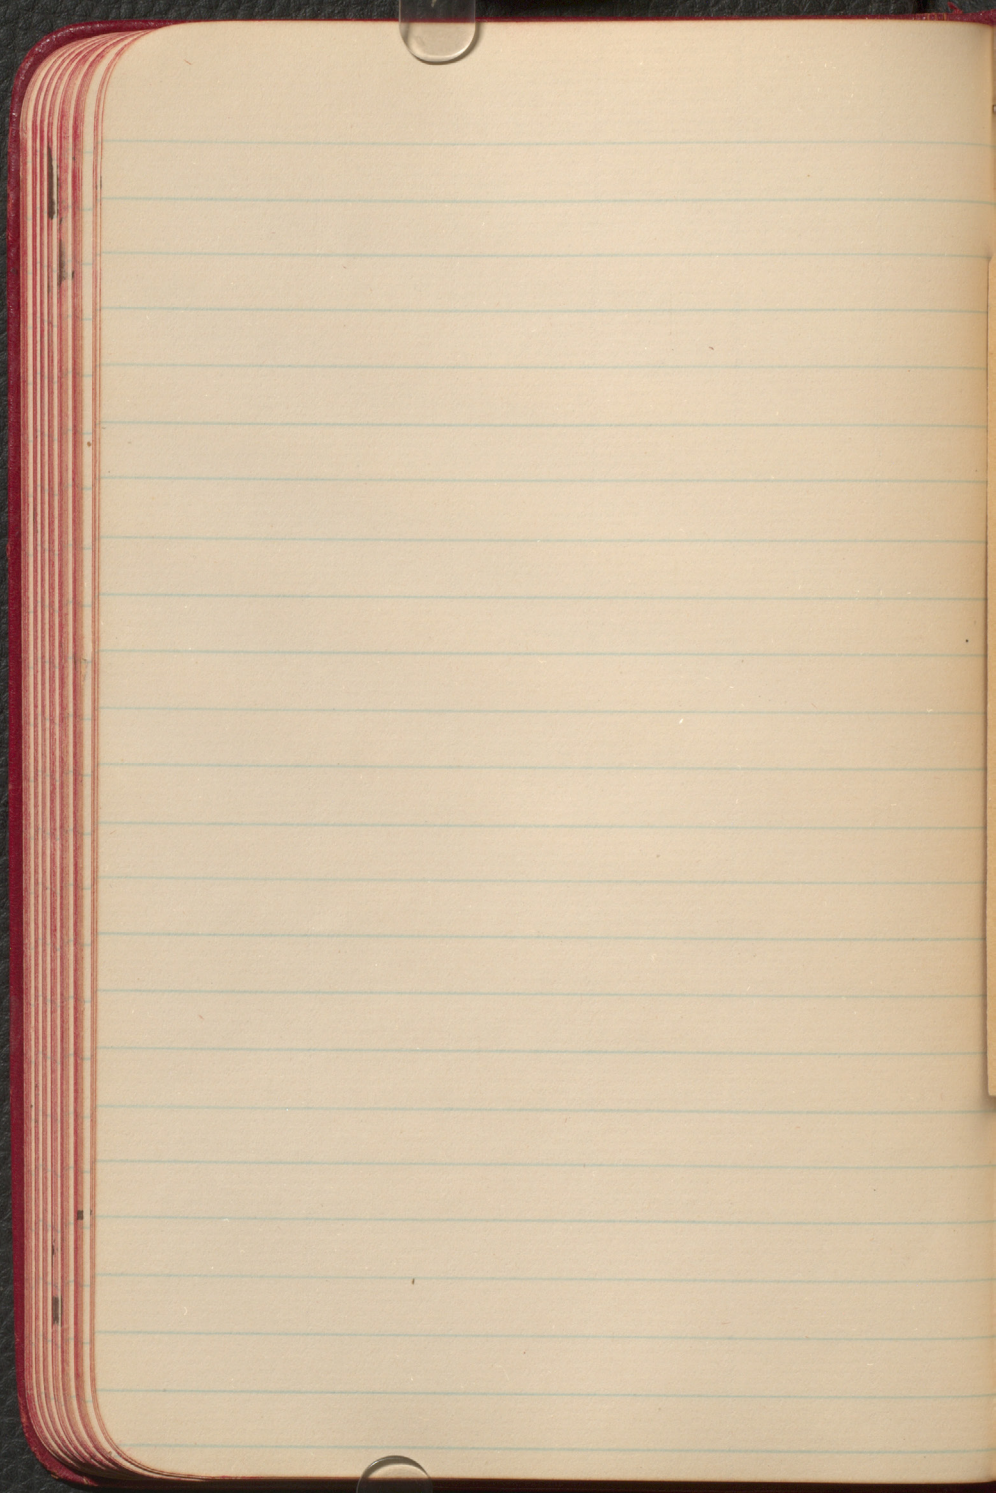

Oct. 24. Early startward by C.P. Ry. on time.
Levi summit beyond Swift Current.

Oct. 25. Reach Winnipeg this P.M. Meet Waldor,
who goes down in same train.

Oct. 26. Sunday. Levi weathers through partly
clouded & cool, Trembling East, on time.

21 June.
