SAINT LOUIS, MISSOURI

Michillinda, Mich.
Aug. 31.

Dear Dr. Cushing:

I am writing you about two things, (1) to ask you about Burton Clark, Jr. who has written to ask me about a vacancy in the resident surgical staff at the Barnes. I don't remember him from my visit with you. (2) I want to add my name to what I know is already a long list of those who have heaped praises on your "Osler".

I saved the book to read while I was here on a little vacation enjoying the cool breezes off Lake Michigan. It has been a tremendous inspiration to me not

only because of the personality of the hero but also because of the remarkable versatility of the author. Your many other accomplishments would be enough to satisfy any ordinary mortal but this last achievement surely places you upon Mt. Olympus.

I am sorry that Dr. Osler didn't know my better half. When I read her the passage about the "bath phenomenon" she said right away that the explanation of it was simply surface tension. Buoyancy of course has nothing to do with it. It seems to me she is quite right. If Dr. Osler had known her he might have thought better of modern physicists.

We have all had a wonderful time up here, and the boys don't want to go home. Please give my regards to Mrs. Cushing

Cordially

Evarts A. Graham
