received Feb. 7th 02
replied Feb. 20th telling Beadnell that we have seen his specimen & that I am writing proper article

G. DAVIES SHERBORN DONAVIT.

PUBLIC WORKS DEPARTMENT,

SURVEY DEPARTMENT,

Cairo, 28/1 1902

Dear Beadnell

I shd. be very much obliged to you if you could determine the fish-teeth I am sending you by post as if it is determinable it will be very useful. I will not tell you what age I imagine it to be as I might mislead you & as the shell was on the surface I cannot swear it came out of the bed below, although I imagine so.

I hope you will let me have M.S. determination of any fossils & then reports are just about to be issued & some subsequent detail will be very acceptable. I have been making great finds in the Fayum of vertebrata & Littel & Blanchenhorn are there now on the hunt!!

Yours truly, in haste

H. J. L. Beadnell.

Shell arrived Feb. 25th. 1902
- It represents a young + worn form of
Chicoreus angulifera. Lamarck
from the Pleistocene beach deposits
of the Red sea
Specimen returned
same date.
